ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 12 ft. 3 in. by 11 in.	from 3s. 6d.	each.
Spruce Deals, 9 in. by 3 in.	„ 2s. 3d.	„
Yellow ditto	„ 4s. 6d.	„
Honduras Mahogany, in logs	„ 0s. 4½d.	per foot.
Ditto ditto, in planks and boards	„ 0s. 6d.	„
Spanish ditto	„ 0s. 7d.	„

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

ACORN TIMBER WHARF and SAW-MILLS,
GRAND SURREY CANAL, OLD KENT-ROAD. — The extensive Waterside Premises Improved Sawing Machinery and Drying Warehouses, with a supply of all kinds of Foreign Wood direct from the importers, enable consumers to select from one of the largest stocks in London, at the lowest prices, for cash.
The Monthly Price Current forwarded on application — RICHARD MAY informs the building public that American Pine and Spruce are cheaper, and Baltic goods are scarce.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross
GEORGE NOKES and CO. (late Archbutt and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, sashbars, match-boarding, skirtings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, scantling, sash sills, mahogany wainscot, &c. Goods sawn at the mills fetched and delivered free of charge.
May 19, 1855.

MACHINE CARVING, JOINERY, and MOULDED WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Joinery executed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, available for various purposes, can be seen at the Works, and Estimates furnished upon application.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.
WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer, with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable designs for Architraves and Skirting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L. are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade.—N.B. All customers having an account at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal support he has received upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 29, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Iron-founders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

TO THE CLERGY, AND TO ARCHITECTS, BUILDERS, &c.
STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and deleterious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, gives a true effect of Oak, Mahogany, or Satin Wood. Those who noticed the Entrance Doors of the Crystal Palace of 1851, which were executed with these stains, would find no difficulty in procuring direct Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.
HENRY STEPHENS, 54, Stamford-street, London.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, fetched away and paid for at the time, at C. LEITWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park. — A large quantity of PAPER-HANGINGS, CHEAP. 18s. per cwt. given for old lead.

STEAM PILE-ENGINES.—WANTED, One or Two Second-hand STEAM PILE-ENGINES.—Address, by letter, to Mr. MORRIS, 3, Bridge-street, Westminster.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

MESSRS. FULLER and HORSEY, at the ROYAL OAK, Barking-road, on TUESDAY, JUNE 26, at TWELVE in LOTS by ORDER of MARINE ENGINEER, by Boulton and Watt, of 35 horse-power each, a 5-horse high-pressure steam-engine, two boilers, with tubes 24 inches diameter, steam boiler, vertical saw-frame, circular saw-bench, pair of two-throw pumps, powerful fore pump, 20 feet cobble deck planking, ship timbers, knees, deadeyes, &c. The whole, and lot of fittings & Governor ship recently broken up, to be viewed on Monday previous to the sale, when catalogues may be had at the Royal Oak; and of Messrs. FULLER and HORSEY, Billiter-street, City.

KENSINGTON PARK, NOTTING-HILL. Most important eligible Plots of Freehold Building Land in this admired locality, the roads and sewers formed.

MR. ROBINS is instructed to SELL by AUCTION, at the MART, on THURSDAY, JULY 12th, at TWELVE precisely, FREEHOLD BUILDING LAND, of an extremely attractive and important description, including the form both sides of the Sussex-road, leading from the London-road; also a continuation of Clarendon-road North and Somerset-terrace, at Kensington-park, Notting-hill. The great beauty and advantages of this much admired locality have been most happily developed by the architect and surveyor of the property in the plan for a building operation, which is worthy of attending towards successful completion. The much admired Sussex Church, now nearly finished, and standing in the immediate view of the premises, of a superior character, has been erected, and are in course of being finished; a glance at the plan will at once show the intimate connection of the land now offered for sale, with the most beautiful part of the estate and the advantages to be derived from residing in the carriage drive of the original scheme. The land will be arranged into lots of moderate size and value, and the building public are invited to inspect the plans and co-operate. Lots and sub-divisions already formed, may be had on application to Mr. Rowed, on the particulars with plans had at the Clarence Hotel, close to the land; of Messrs. Roy and Dawkins, Solicitors, Lothbury; at the Mart; and at Mr. Robins's Offices, Covent-garden.

THE CAMBRIAN LIME and CEMENT WORKS, CANTON in the Parish of Llandaff, Glamorgan. *By* James Bird, a Bankrupt.

MESSRS. W. H. WILLIAMS and CO. of Bristol, will SELL by AUCTION, at the CARDIFF ARMS, CARDIFF, on TUESDAY, the 26th DAY of JUNE, at FIVE o'clock in the afternoon precisely, subject to such conditions as will be then and there produced. The following desirable LEASEHOLD PROPERTY, viz.:—

Lot 1.—All that Piece or Parcel of LAND, situate at Canton, in the Parish of Llandaff, in the County of Glamorgan, containing by admeasurement 2a. 3r. 6p., or thereabouts, together with the Factory, consisting of Steam-engine, with Boiler and Grinding and Screening Machinery, Weigh-bridge, and a block of Four Kilns, together with Sheds and other Erections and Buildings thereon, now or lately used as a Lime and Cement Manufactory. This Lot is held for the remainder of a term of 99 years, from the 25th day of March, 1851, subject to the annual rent of £6.

Lot 2.—All that Piece or Parcel of LAND, adjoining Lot 1, containing by admeasurement 1a. and 1r. or thereabouts. This Lot is held for the remainder of a term of 99 years, from the 25th March, 1851, granted by an Indenture of Lease bearing date the 21st May, 1853, and subject to the annual rent of £2.

Copies of the respective leases will be produced at the time of sale, and in the meantime may be inspected at the Offices of Messrs. EDWARDS and FORMAN, Solicitors, 7, Coleman-street, London; CLEMENT WALDRON, Esq. Solicitor, Cardiff; and Messrs. W. H. WILLIAMS and GIMLETTE, Solicitors, Bristol, from which, and from the Auctioneers, further particulars may be obtained.

SALES BY AUCTION.

MARBLE.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days

MONDAY, 9th AUG. " | MONDAY, 1st OCT. 1855
MONDAY, 3rd SEPT. " | MONDAY, 5th NOV. "

Catalogues and further particulars to be had on application one week previous to each sale.—The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE. Just arrived, and landing, about Fifty Blocks of Statuary, and several cargoes of other Marbles.

SHOREDITCH.—Leasehold Manufacturing Premises, a 30-horse power Steam-engine and Boiler.

MR. J. J. CLEMMANS has received instructions to submit for SALE by AUCTION, on the PREMISES, Nos. 9 and 10, New-road, Shoreditch, on MONDAY, JUNE 25, 1855, at TWELVE o'clock, by order of Messrs. Will, who are liquidating this part of their business, unless an eligible offer should previously be made by private contract, all the valuable MACHINERY, comprising a 30-horse power steam-engine, a tubular boiler on the Cornish principle, 16-inch cylinder engine, 9-inch stroke, two-throw machines cocoa-nut fibre-breaking machine, upright sawing frame, with circular saw, lathes, counter-shafting, and other effects. The premises, four floors high, being adjoining, will adapt for carrying on an extensive business, having a lofty chimney-shaft and a good well of water. The whole can be viewed until the day of sale, and further disposed of with the Lease if not sold previous to catalogue. May be viewed on Saturday and morning of sale, when the machinery will be in motion, and catalogues had on the premises; of Messrs. Rooper, Ex.-Solicitor, 4, King-street, Finsbury; and at the Office of the Auctioneer, 11, Bedford-row, Holborn-square.

ST. MARGARET'S ESTATE, ISLEWORTH.—To BUILDERS, TIMBER MERCHANTS, FIXTURE DEALERS, and Others.

MR. CAIN (by direction of the Conservative Land Society) will SELL by AUCTION, on the PREMISES, on TUESDAY, JUNE 26, at TWELVE for ONE, the whole of the excellent BUILDING MATERIALS of the large and commodious DAIRY, with dwelling-house attached, and lodge, comprising counters, slating, and pantiles, several rods of brickwork, tile kiln, quantity of stone paving, slate shelves and skirting, the mahogany fittings-up of water-closet, with apparatus complete about twenty squares of prime yellow floor boards, a large quantity of joists, rafters, and timbers, a handsome trellis verandah, about one ton of lead, a large quantity of stock wood, full sale of fine timber, in elm, lime, sycamore, fir, &c. and other useful effects. May be viewed two days prior to the sale, and catalogues had on the Premises; of Messrs. Harrison and Lewis, 14, New Bowell-court; of G. Morgan, Esq. Architect, 6 and 6, Chancery-lane; C. L. Gruneisen, Esq. at the Offices of the Society, 33, Norfolk-street, Strand; at the principal Inns in the neighbourhood; and at the Auction Offices, King-street, Richmond.

TO TIMBER MERCHANTS, CABINET MAKERS, PIANOFORTE MANUFACTURERS, COACH BUILDERS, CARPENTERS, BUILDERS, &c. &c.

MESSRS. C. LEARY and CO. will SELL by PUBLIC AUCTION, without reserve, on the PREMISES, 97, Curtain-road, Shoreditch, on MONDAY, TUESDAY, and WEDNESDAY, the 25th, 26th, and 27th of JUNE, 1855, commencing each day at ELEVEN o'clock precisely, by order of the Proprietor, Mr. William Smith, Mahogany and Timber Merchant (who is about to RETIRE from the retail trade in favour of his sons, Messrs. H. A. and C. J. Smith), all his remaining STOCK in TRADE, consisting of Spanish and Honduras Mahogany in logs, blade boards, and veneers; prime dry panel board; cedar, rosewood, birch, beech, staves, and wainscot, spruce and pine planks, and deals &c.—To be viewed the morning of sale, and the mornings of sale. Catalogues may be had on the Premises; and at the Offices of the Auctioneers, 25, Old Broad-street, City.

UNRESERVED SALE OF MARBLE MASONS, SCULPTORS BUILDERS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, without the slightest reserve, on the PREMISES, Nos. 8 and 9, North Wharf, Paddington, on FRIDAY, JUNE 29, 1855, at TWELVE o'clock, the STOCK of MARBLE, in slabs, consisting of Sicilian, Veined, Black, and Statuary, varying from 1 of an inch to 3 inches in thickness. May be viewed the day prior and morning of sale and catalogues obtained on the premises; and at Mr. Marsh's Offices, 6, Charles-street, Middlesex Hospital. Mr. Marsh has to announce that the above will be sold without the slightest reserve, the proprietor having given up the premises.

TO BUILDERS, HOUSE DECORATORS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, The Mount, Notting-hill, in consequence of the removal of Mr. Holmes to 16, Queen's-gate, Bayswater, on TUESDAY, JULY 10, at TWELVE o'clock, the very valuable STOCK, comprising thirty superior chimney pieces, in stone; statuary, with carved trusses; black and gold, vein, black, and Bardilio marble; a Genoa marble table, two marble washstands, pedestals and quarters, enamels in cement, vases and pivoted busts, and sundry ornamental items.—May be viewed one day prior and morning of Sale, and catalogues obtained at the Place of Sale, and at Mr. Marsh's Offices, 6, Charles-row, Mansion-house.

Very valuable and beautifully situate Freehold Building Land, at Lewisham, with an approach from the High-street, and also from the Loampit Hill and Turnpike Road.

MESSRS. DANIEL SMITH and SON will submit to SALE by AUCTION, at the MART, on TUESDAY next, JUNE 26, at TWELVE (unless an agreement previously be made), about SIX ACRES of valuable LAND, freehold and free of tithes and land-tax. It is a dry elevated spot, with an extensive frontage upon the High-street, leading from the station to the village of Weybridge, and upon the Oatlands drive, capable of being subdivided for the erection of five or six villas. There is good brick earth on part of the ground. Particulars and plans may be had at the Mart; at the chief Inns in the neighbourhood; of Mr. Hodgson, Builder, Weybridge; of Mr. Gribble, Solicitor, Angel-court, Throgmorton-street, and of Messrs. DANIEL SMITH and Son, Land Agents, in Waterloo-place, Pall-mall.

Building Freehold Land, in Surrey, near the station and village of Weybridge and between Chertsey, Oatlands Park, and Walton.

MESSRS. DANIEL SMITH and SON will SELL by AUCTION, at the MART, on TUESDAY next, JUNE 26, at TWELVE, unless an agreement previously be made, about SIX ACRES of valuable LAND, freehold and free of tithes and land-tax, situate on the Oatlands drive, capable of being subdivided for the erection of five or six villas. There is good brick earth on part of the ground. Particulars and plans may be had at the Mart; at the chief Inns in the neighbourhood; of Mr. Hodgson, Builder, Weybridge; of Mr. Gribble, Solicitor, Angel-court, Throgmorton-street, and of Messrs. DANIEL SMITH and Son, Land Agents, in Waterloo-place, Pall-mall.

TO BUILDERS and OTHERS. — TO BE LET, in that rapidly increasing and genteel neighbourhood, HARRISON, SURREY, valuable PREMISES, comprising a dwelling-house, workshops, two saw-pits, stable, &c. lately occupied by a timber merchant and builder. To a young man with a small capital, the above affords a rare opportunity, as the premises are most eligibly situated for a wood-yard, being adjacent to the railway station, having a back entrance to the Kingston station. Apply to Mr HOLLINSHED, on the Premises.

BROOK-HILL PARK, West Plumstead, adjoining the parish of Woolwich. TO BE LET, in PLOTS, for the erection of detached and semi-detached villas. The situation is attractive, the ground undulating, and it lies within a short distance of the Arsenal Station of the North Kent Railway, the Artillery Barracks, and Woolwich Common, and opposite to the grounds of the residence of the commanding officer of engineers. Money will be advanced if required.—Plans may be seen, and particulars had at the Offices of Mr. GEORGE HUDSON, Surveyor, Brewer-street, Woolwich.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery businesses to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 3-horse engine boiler, 3 furnaces and fans, screw-cutting and other lathes, benches, anvils, blocks, tools, &c. The forego ng spacious premises are in full work, and will be supplied, and may be had on advantageous terms.—Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255 Blackfriars-road, near the bridge.

MAITLAND-PARK, HAVERSTOCK-HILL, Hampstead-road.—LAND-TAX REDEEMED.—TO BE LET, upon Building Leases, for ninety-nine years, desirable BUILDING SITES upon the ab ve Estate The continued demand for houses in this healthy and picturesque position of the property adjoining the grounds of the Orphan Working School, render this a desirable opportunity for builders or gentlemen wishing to erect villas for themselves. For terms and to view plans, apply to the Secretary of the Orphan Work ng School, 32, Ludgate-hill; Messrs. TERRELL and CHAMBERLAIN, 30, Bedford-street; the Architects, Messrs. WEHNERT and ASHDOWN, 42, Charing-cross; or at the Porter's Lodge, on the Premises.

BUILDING GROUND TO BE LET, in the best part of Euston square, with a frontage of 170 feet; a populous and respectable neighbourhood; suitable for a church, chapel, public building, or dwelling-houses. For particulars apply to Mr. GRAHAM, No. 32, Taviton-street, Euston-square.

KENSINGTON GORE.—Valuable SITES for first-class MANSIONS, in the new (Prince Albert's) road, Kensington Gore, with frontages to the park-like property purchased by the Royal Commissioners for the Exhibition of 1851, as sites for institutions connected with science and art, may be obtained upon 99 years' leases.—Apply by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

FREEHOLD BUILDING LAND TO BE LET at Bath-road, in large or small plots, where bricks will be advanced. It fronts a high road with good sewer; plenty of sand and water may be easily obtained on the ground, and every probability of a railway crossing the land, notices having been given.—Apply personally to the owner, at Chesterfield-house, Bath-road, Peckham, before TEN o'clock a.m.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Money advanced to responsible persons, if required.—For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman-street, City.

FREEHOLD BUILDING GROUND, at OLD FORD, with Liberal Advances, to LET, suitable for fourth-rate houses, which, being much required in this rapidly-improving locality, will let and sell as soon as completed.—For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 48, Penton-street, Pentonville.

VALUABLE BUILDING SITE, in the High-street, Camberwell, TO BE LET, on building lease, having two frontages, making together about 168 feet in length, with large premises, recently occupied as a boiling house, &c. standing thereon.—Apply to WILLIAM C. REED, Architect, 64, Old Broad street, City, where a plan of the estate can be seen, and an order to view obtained.

FREEHOLD BUILDING LAND TO LET, abutting on the Barking station of the Tilbury line, twenty minutes from Fenchurch-street, where moderate-sized houses are greatly in demand, and a first-class public-house urgently wanted for the accommodation of the station and neighbourhood. Apply to H. WILLIAMS, Esq. Arch tect, 64, Great Ormond-street, Queen-square.

CAMBERWELL, opposite the Rye-lane. To Builders and Others. Valuable Freehold Premises, and Plots of Land in the rear

MR. PEAKE is instructed by the Proprietor to DISPOSE OF the PROPERTY by PRIVATE CONTRACT, which presents a favourable opportunity of creating a most lucrative investment by a small judicious outlay. A plan may be seen and further particulars obtained at Mr. PEAKE'S Office for the Disposal of Estates, 44, Tooley-street, Southwark.

KENTISH-TOWN.—TO BE SOLD, several well-built six-roomed CARCASES, with garden ground, in a first-rate situation, and low ground-rents. For particulars apply to S. TAYLOR, Plumber, &c. 2, Albany-place, Kentish-town-road.

FREEHOLD LAND, near Forest-gate, Stratford. TO BE SOLD, together or separately, THREE PLOTS of LAND, close to the Forest-gate Station, of the following dimensions, namely 93 feet by 114 feet, 91 feet by 101 feet, and 95 feet by 116 feet. Land-tax redeemed.—For particulars, apply to Mr. RANDALL, Solicitor, 14, Tokenhouse-yard, London.

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's Wood.—For particulars apply, by letter, post paid, to W. L. No. 2, Craven-terrace, Paddington.

FOR SALE, TWO FOURTH-RATE CARCASES; lease, 100 years; ground-rent 5l. each; or the amount of purchase-money will be taken in any kind of building materials. Apply by letter only, to Mr. K. DYE, 8, Stafford-street, Lisson grove, Marylebone.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 9, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

BUILDER'S BUSINESS, within three miles of the Bank.—TO BE DISPOSED OF, a respectable BUSINESS, with dwelling-house, large yard, eight workshops, including Joiner's shop, and building, benches; all for 500 guineas. This is an excellent opportunity for a young man going into business, as it has been established thirty years, and the rent of the house and premises is merely nominal.—Direct or apply to Mr. THOMAS KING, 1, St. Michael's-alley, Cornhill.

TO CARPENTERS AND BUILDERS.

TO BE DISPOSED OF, a moderate but good BUSINESS, capable of considerable extension, in a populous and increasing locality. The Premises, which are eligibly situated, consist of a convenient yard, an excellent workshop, with store for dry deals beneath; a saw-pit, 1-horse stable and chaise house, with immediate possession if desired. For particulars apply at 4, Bennett-street, East Greenwich, Kent.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, June 23, 1855.

COMPETITIONS.

TO ARCHITECTS.

HE COMMITTEE appointed by the Secretary of State for War, to consider the question of ACK ACCOMMODATION for the Army, are authorized r the following prizes, for PLANS of BARRACKS, which embody the recommendation contained in their Report, June 18, 1855:—

e best plans for an Infantry Barrack, to accommo- 1,000 Men £150
e second best 100
e third best 50
e best plans for a Cavalry Barrack, to accommodate Men 150
e second best 100
e third best 50

candidate who obtains the highest prize of £150 for the best ry Barrack, will be employed to execute his plan in the ng of an Infantry Barrack. The same for the Cavalry ks. Each plan must be accompanied by specifications and tes, and where plans seem in other respects to possess equal a preference will be given to those which provide the neces- ccommodation in the most economical manner.

gs, specifications, and estimates, must be sent to the Ord- Office, Pall Mall, on or before the 31st JULY next, ad- to the Chairman of the Committee on Barracks." All ent in, will remain the property of the War Department

es of the Report of the Committee, and of the Evidence, may d on application to the Barrack Department at the Ord- Office.
(Signed) MONCK, Chairman.
y 21, 1855.

COMPETITIONS.

TO ARCHITECTS, BUILDERS, AND OTHERS.

THE BURIAL BOARD for the PARISH of SAFFRON WALDEN, in the County of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for LAYING OUT, PLANTING, and FENCING a NEW BURIAL-GROUND, with suitable ENTRANCE GATES, and for BUILDING a LODGE and TWO CHAPELS thereon. The ground contains about six acres, a plan of which may be seen and further information obtained at the Office of the Clerk to the Board. The party whose plans are approved will, at the option of the Board, either have the superintendence of the works or be paid the sum of twenty guineas for his designs. The plans and estimates must be delivered at the Office of the Clerk to the Board on or before TWELVE o'clock at noon, on the 23rd day of JULY next. Each plan is to be distinguished by a motto, and a sealed letter, similarly indorsed, containing the author's name and address, to be sent therewith. SIMEON J. KING, Clerk to the Board.

Saffron Walden, June 21, 1855.

SUDBURY BURIAL BOARD.—To ARCHITECTS and OTHERS.—The Burial Board for the Borough of Sudbury are prepared to receive DESIGNS, PLANS, and DRAWINGS; comprising ground plans, sections, and elevations, accompanied by a general specification and statement of probable cost for two CEMETERY CHAPELS, RECEPTACLE HOUSE, and LODGE, on their intended Burial ground, which contains about 7 acres. The buildings to be inexpensive, and ecclesiastical in their character. The Board will not be bound to employ the person whose design, plan, or drawing shall be adopted, but in the event of his not being employed, will pay such person a premium of fifteen guineas, and his design, plan, and drawing shall then become the property of the Board. A plan of the ground may be seen, and any further information obtained at my office. The designs, plans and drawings are to be sent free of expense, under seal, without the author's name, but with a motto, on or before the 16th day of JULY next, addressed to me, marked, "Sudbury Burial-ground." A sealed letter, containing real name and address, should accompany each design, plan, and drawing, which will be opened after selection made; and those not approved will be returned. No design, &c. with the author's name upon it, will be received.

ROBT. RANSOM, Jun. Clerk to the Board.

Sudbury, June 27, 1855.

BLANDFORD FORUM BURIAL BOARD.—To ARCHITECTS and OTHERS.—The Burial Board for the parish of Bland ford Forum, in the county of Dorset, is desirous of receiving PLANS and DESIGNS for TWO CHAPELS, an Entrance Lodge and Gates, a Receptacle-house, and for the Fencing and Laying out the Ground. A plan of the ground, which contains four acres, may be seen at the Office of the Clerk to the Board. The party whose plans are approved, will, at the option of the Board, either have the superintendence of the works, or be paid the sum of 10l for his designs. The plans, &c. to be sent (prepaid) to the Clerk to the Board, on or before the 27th day of JULY next. The Board does not pledge itself to accept any plan.
FRANCIS T. JOHNS, Clerk to the Board.

Blandford, June 20th, 1855.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, Pall-Mall, London, on or before MONDAY, the 2nd of JULY, 1855, from parties willing to Contract for STONEWORK required to be performed at the New Battery, near Fort Monckton, Gosport. Plans and specifications for the work may be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR o'clock (Sundays excepted). The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall Mall, London, and endorsed "Tenders for the performance of Stonework, at the New Battery, near Fort Monckton, Gosport."

Royal Engineer Office, Portsmouth, June 18, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer in the London district hereby gives Notice, that sealed TENDERS, addressed to the Secretary to the Board of Ordnance, will be received at the Office of Ordnance, Pall-mall, on or before the 2nd of JULY, 1855, for SUPPLYING, LAYING DOWN, and FIXING the necessary GAS-PIPES and FITTINGS to the several buildings at Wellington, St George's, Regent's-park, and St. John's Wood Barracks. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineers' Office, No. 11, James street Pimlico, between the hours of TEN and THREE o'clock, from the 21st to the 30th of JUNE, 1855. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineers' Office, London District, June 19, 1855.

Royal Engineer Office, Portsmouth, June 19, 1855.

TO BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on WEDNESDAY, the 4th day of JULY next, from such persons as may be willing to undertake the ERECTION of a BATTERY, with MAGAZINES, &c. at Hurst Castle, near Lymington, Hants. The plans, specification, and conditions of contract, may be seen, and every information obtained, on application at this Office, between the hours of TEN and FOUR each day, Sundays excepted. Tenders to be indorsed "Tender for the Erection of a Battery, with Magazines, &c. at Hurst Castle, near Lymington, Hants," and to be inclosed to J. WOOD, Esq. Secretary, Office of Ordnance, Pall-mall, London.

NOTICE to BUILDERS.—Sealed TENDERS, addressed to the Inspector-General of Fortifications, will be received at the Ordnance Office, Pall mall, London, on or before the 7th JULY next, for certain ALTERATIONS and ADDITIONS to Pater Battery. The specifications and plans for the above service may be seen, and the form of Tender be obtained, with every information, at the Royal Engineer Office, Pembroke Dock. The Inspector-General of Fortifications reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Pembroke Dock, 21st June, 1855.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of FARM BUILDINGS at Kirtling and Ashley, Cambridgeshire, for the Trustees of the Hon. W. H. J. North, may inspect the plans and specifications of the works, at the Office of Mr. J. F. CLARK, the architect, Newmarket. Tenders to be delivered and opened in the presence of the parties, on the 14th day of JULY next, and the lowest or any Tender will not necessarily be accepted.

WORTHING LOCAL BOARD of HEALTH.—WATER-WORKS.—To EXCAVATORS, CAST IRON PIPE LAYERS and OTHERS. The Local Board hereby give notice, that they are prepared to receive TENDERS, from parties willing to undertake the following contracts:—
CONTRACT No. 14. For EXCAVATING the GROUND and for LAYING and JOINTING CAST-IRON WATER-PIPES and FIXING SLUICE VALVES, HYDRANTS, &c.

Specifications, schedules, and forms of Tender (five shillings the set), may be obtained, together with any further information required, on application at the Office of the Local Board, Worthing; or at the Offices of ROBERT RAWLINSON, C.E. No. 34, Parliament-street, Westminster. Sealed Tenders to be delivered at the Office of the Local Board, Worthing, before TWELVE o'clock, on TUESDAY, the 10th day of JULY, endorsed "Tender for Contract, No. 14."

(Signed) WM. HUGH DENNETT,
Worthing, June 21, 1855. Clerk to the Local Board.

METROPOLITAN COMMISSION of SEWERS. To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek-street, Soho-square, on TUESDAY, the 3rd day of JULY next, 1855, at ONE o'clock p.m. precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETING in the CHALK certain intended BRICK and PIPE SEWERS, 4,967 feet in length or thereabouts, with other Works in connection therewith, in Tanner's hill, Broadway, and New Cross-road, Deptford, Hounds-dale, Hanover-street, and Cross-street, Lewisham, in the county of Kent; and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender may be inspected, and their particulars obtained at the principal Office of the Commissioners, No. 1, Greek-street, Soho-square, between the hours of NINE a.m. and FOUR p.m. until the 2nd JULY. The Commissioners do not hold themselves to accept the lowest or any Tender; and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour at above mentioned.

E. H. WOOLRYCH, Secretary.

No. 1, Greek street, Soho square.
Date this 21st day of June, 1855.

TO ARCHITECTS AND OTHERS.

THE BURIAL-BOARD for the Parish of WESTBURY, in the county of Wilts, is desirous of receiving DESIGNS, to comprise Plans, Elevations, Sections, and Specifications, with Estimates, for LAYING OUT a NEW BURIAL GROUND of about SIX ACRES, ENCLOSING the GROUND, BUILDING a LODGE, with ENTRANCE GATES, and BUILDING TWO CHAPELS, one consecrated and the other not. The party whose plans, &c. may be approved, will be paid a premium of 25l. for the plans, designs, estimates, and specifications, the same to be delivered at my office, free of expense, without the author's name, but with a motto, on or before the 7th day of JULY next. A sealed letter, containing the name and address, should accompany each design, which will be opened after selection made, and the plans not approved will be returned. Further particulars, together with a plan of the site, may be obtained, on application to me.

HENRY PINNIGER, Clerk to the Board.

Westbury, 19th June, 1855.

GLOUCESTER WATER-WORKS.—EXCAVATION for WATER MAINS, &c.—The Gloucester Board of Health are desirous of receiving TENDERS for CUTTING the TRENCH, for LAYING the MAIN WATER-PIPE (19 inches in diameter), in the direction of the intended New Water-works, for a distance of about three miles and a half, and for CARTING the WATER-PIPES and other CASTINGS from the Railway Station at Gloucester along the line of Trench and for other Works. The specification and forms of Tender may be had on application to Mr. BATEMAN, C.E. Manchester; or Mr. K. H. FRYER, Solicitor, Gloucester, the Clerk to the Board. All Tenders are required to be sent in to the Clerk, under a sealed cover, marked "Water-works Tender," and addressed to "The Gloucester Board of Health," on or before TUESDAY, the 3rd day of JULY next. The Board do not pledge themselves to accept the lowest or any Tender.

K. H. FRYER, Clerk to the Board.

Gloucester, 14th June, 1855.

TO SLUICE BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for CONSTRUCTING a new OUTFALL SLUICE, and executing other WORKS, about one mile above the town of Wisbech, for the drainage of Wisbech, south side, and Elm, west side, may see the plans and specification at my office. The Tenders to be sealed and sent to me on or before FRIDAY, the 6th of JULY next, at ELEVEN o'clock, a.m. The parties putting out the work will not bind themselves to accept the lowest or any Tender.

WM. ADAMS, Surveyor, &c.

Wisbech, June 22nd, 1855.

TENDERS will be received on WEDNESDAY next, at FIVE o'clock, at the Office of Mr. WILLIAM E. WILLIAMS, Architect, No. 75, Oxford-street, for the ERECTION of a SEMI-DETACHED VILLA at Peckham. Plans, &c. may be seen daily before the hours of TEN and FIVE. Mr. W. does not bind himself to accept the lowest or either of the Tenders

[For remainder of Contracts see next page.

CONTRACTS.

GRIMSBY LOCAL BOARD of HEALTH.—WATERWORKS and DRAINAGE To CONTRACTORS, ENGINEERS, IRON FOUNDERS, and OTHERS. The Grimsby Local Board of Health are notified that they are prepared to receive TENDERS from parties willing to undertake the following CONTRACTS:—ENGINE, BOILER, PUMPS, drawings and specifications may be seen, and can other information obtained, at the office of Mr. E. MICKLETHWAIT, the Surveyor to the Local Board of Health, on and after MONDAY, the 25th JUNE next. Sealed Tenders to be sent in to the office of the Clerk to the Local Board of Health, on or before the 14th JULY next at TWELVE o'clock at noon, indorsed "Tender for Drainage and Waterworks." Copies of the specifications may be obtained on application to Mr. MICKLETHWAIT, on payment of 10s.—Tenders will be required for any one of the contracts, but a preference will be given to the persons tendering for the whole. The Local Board of Health do not bind themselves to accept the lowest or any Tender.

By order,
GEO. BABB, Clerk.

Great Grimsby, June 12, 1855.

PLYMOUTH BREAKWATER.—CONTRACT for GRANITE.—The Lords Commissioners of the Admiralty propose CONTRACTING for upwards of 250,000 CUBIC FEET of GRANITE for Plymouth Breakwater, the conditions and specifications for which may be seen at the office of Messrs. Engineers' and Builders' Castings of all kinds manufactured by

JOHN WALKER,

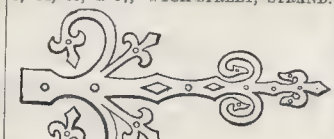
Builder, Contractor and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced Draftsmen are kept to furnish designs and estimates, which may be forwarded on application.

Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable reduction made to the trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to LOW, near London, close to the Barr Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.



Island Foundry and Ironworks, Millwall, London.

Offices: 13, Fetchurch-street, City.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

3, 54, 55, & 57, WYCH-STREET, STRAND.

An Illustrated Catalogue on receipt of four postage-stamps.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the grove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO., opposite the Monument, London bridge. Established A.D. 1700

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEPRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, odour, and accidents from fire are effectually prevented by stove while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEPRIES'S Office, 143, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler room be seen daily in full operation, heating build ngs measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

139, Strand, London.

67, Hyde-park-street, Glasgow.

37, Dale-street, Manchester.

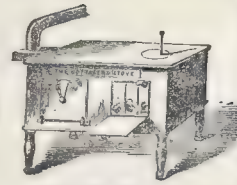
Builders, Contractors, and others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

a complete LIST of which will be forwarded upon application.

FREDERICK HILTH,



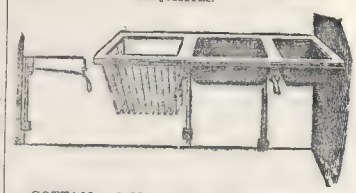
Nail Manufacturer and General Factor,

Regent-parade, BIRMINGHAM;

or at 16, Gresham-street, LONDON.

THE COTTAGERS' STOVES.

Testimonial.



"Lord Hardinge requests Messrs. BAILEY will be good enough to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them the stoves have received VERY GOOD notices in the Camp before SEBASTOPOL.

Horse Guards, 29th Feb. 1855."

D. and E. BAILEY, Ironmongers, 279, Holborn

Price 50s.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse, whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley street, Oxford street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THIS IS THE ORIGINAL PATENT

for important improvements in stable-fittings including a method surpassing all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse getting out in the stall. Stable Fittings of every description, enamelled or galvanized. All Kinds of Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c. &c. Manufacturer of Barton's Patent Noiseless Cast-Iron Sunshine Curing Chimney-Cans.—200 on Buckingham-palace.—Price Lists sent on receipt of two penny postage-stamps.

JAMES BARTON, Iron Founder, &c. 370, Oxford-street, a few doors East of the Pantheon.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Iron Masters, Establishment, 20, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing the three separate kinds of work in one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kings road, Chelsea, and added to their very extensive and fashionable Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Turning, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply both S. W. and Co.'s one to state that they have for a great many years past had the principal share of supplying some of the most eminent Shipbuilding companies and contractors in the world with their Machines for home and foreign use.

LIVERPOOL and MANCHESTER PATENT GALVANIZED IRON WORKS.—FRANCIS MORTON and CO.—Galvanized Sheet Iron of the best quality; duties, express prepaid, for Tinmen and Braziers. Corrugated Sheets, Painted or galvanized, of all sizes, for Roofing. Fireproof Partitions, Ceilings, &c. always kept in Stock. Gas and Water Tubing, Bath-water Gutters and Pipes; Wire of all numbers; Nails, Screws, Spikes, Hoops, &c.; Wrought Iron Hurdles, Field Gates, &c. An allowance to Shippers and the Trade. Head offices, 19, James-street, late Coalbrookdale Company's Premises, Liverpool, and at 18, St. Mary's gate, Manchester.

N.B. Parties are particularly requested to note the address, LIVERPOOL.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE,

Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Pipes, and

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.

Office, No 7, Bide-lane, London.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and Co. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, cemetery, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show every article marked in plain figures. Patenters and manufacturers of the Mercurial Gas Regulator. Complete pattern-book and price list, 10s. 55 and 56, High Holborn.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1704, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

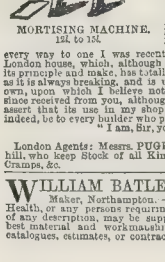
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 55, High Holborn.

TO BE SOLD, a TEN-TON TRAVELLING JENNY, complete. Apply at KING and HEMINWAY'S, 5, York-street, Lambeth.

ENAMELLED IRON TUBING, at the same price as plain tubing.—From 5.8 to 10.60 feet of various sizes, from ¾ inch to 3 inches diameter, at HOOD and SON'S Castings Warehouse, 68, Upper Thames street.



IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

MORTISING MACHINE. 12l. to 13l.

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this difficult thing, cheap, and most effective machine. Hundreds are in daily use all over the kingdom, and references to any extent can be given to prove it really is what it is represented, viz. the most valuable tool ever offered to the trade.

Amongst testimonials of the highest character, he would respectfully invite attention to the following:—

"Rugby, June 14, 1855.

"Dear Sir,—In reply to your inquiry respecting the Patent Morusing Machine I purchased from you three years ago, I have to inform you I consider it a most simple, excellent, and durable article; nor do I think it saying more than it deserves when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principle and make, has totally deceived myself and all others, as it is always breaking, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I candidly assert that its use in my shop is of great value, as it must, indeed, be to every builder who possesses it.

"I am, Sir, yours faithfully,

"JOHN PARNELL."

London Agents: Messrs. PUGH and CO. 13, King-street, Snowhill, who keep Stock of all Kimberley's Patent Cords, Flooring Cramps, &c.

WILLIAM BATLEY, Engineer and Boiler Maker, Northampton.—Manufacturers, Local Boards of Health, or any persons requiring Engines, Machinery, or Boilers of any description, may be supplied with the same of the very best material and workmanship on the shortest notice.—For catalogues, estimates, or contracts, apply as above.

PATTERN and MODEL MAKING.—Engineers, Founders, Builders, Patent Agents, and others, are respectfully informed that the advertiser makes PATTERNS for every description of CASTINGS, at prices considerably less than those usually charged by the trade. Working or other models made with the utmost secrecy and promptitude.—ABRAHAM BOWEN, 162, Goswell street, two doors from Wilderness-row Patent Agents liberally dealt with.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, so that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission

The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.

PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble, boldly massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

STONE! STONE! STONE!—Go to Devon Wharf, Mile-end, for your Sinks, Sawn Slabs, Self-faced Slab, Paving, Curb, Bath, Portland, and every other description of Block Stone, Landing, and every article in the stone trade, and you will save money. Bath Stone delivered at 1s. 7½d. per foot cube. Terms, cash.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

HAYTOR GRANITE COMPANY.—Incorporate by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—Mr. J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. &c. at the lowest wholesale prices. NOTE.—No charge made for supplying to dimensions. Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 946, High-street, Southwark, near the Townhall.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Thanfield-place, Leeds.—To Builders and Buyers of the best Quality—Direct from the Quarries in truck-loads of five tons. Pavings, Landings got out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

VALUABLE SANDSTONE for PIER and DOCK PURPOSES.—To STONE MERCHANTS and CONTRACTORS.—To be SOLD by PRIVATE CONTRACT about 300 000 CUBIC FEET of SANDSTONE of the best quality. The quarry is situated at Golden Bank, Horsforth, near Leeds, half a mile from the North-Eastern Railway Station. The stone has been extensively used in the construction of Government dock and harbour works. The baring is not above 5 feet in depth, and as the quarry has been wrought upwards of twenty years, the entire breadth and depth of the bed of stone is open for working. Blocks of from one to twenty tons may be cut, and can be carted from the lowest level of the quarry. A purchaser at a distance would readily meet with competent and trustworthy persons near the spot, who would contract to get and deliver the stone.—To learn the time allowed for removing the stone, and other particulars, apply to Mr. C. L. DRESSER, Land surveyor, Leeds; or to Mr. EDWARD BUTLER, Solicitor, Leeds.

4, Park-row, 17th June, 1855.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, at which, from its price, and the facility with which it is wrought offers immense advantage to the purchasers. Apply to FRAS. and COCTS. of SIMPSON, Stamford.

N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Saville-row, Burlington-gardens, London.—May, 1855.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORKSHIRE STONE of the very best quality, direct from their Quarries, to the Railway Stations and Ports in the Kingdom, on the most reasonable terms. GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BANGOR SLATES, of all sorts and sizes SLABS of all dimensions, and of superior quality, prices and particulars, apply to J. EASTWOOD and SON, Surrey Canal-bridge, Old Kent-road. -Export orders supplied promptly.

TO BUILDERS and Others in Town and Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Contractors, Builders, and others, that his PRICE LISTS of SLATES and SLAB WORK for 1855 are NOW READY, and may be had on application, inclosing a postage-stamp.

N.B. A liberal discount to the trade.

VALENTIA SLATE SLABS.

The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Marble Floors in Bedfordshire and Hertfordshire, Breweries, the Royal Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; Messrs. Chapman, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.

ENAMELLED SLATE CHIMNEY PIECES, of elegant designs and superior workmanship, great variety, at prices from 2ls. to 10 guineas. Slate Cisterns in any size. J. HOWELL, Manufacturer, 5, Cook's-ground, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some additional machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. The best goods are now supplied at prices below those charged by the parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

ROYAL POLYTECHNIC INSTITUTION.—THREE REMARKABLE NOVELTIES. First, Lecture by J. H. Pepper, Esq. on the Discovery of the True Mission of the Human Voice and Vocal Music through the conductors, being a novel addition to the Lecture delivered before her Most Gracious Majesty and his Royal Highness Prince Albert the Patron of the Institution. Second.—Daily, a Complete Assortment Collection by Jno. Barrow, Esq. of the Admiralty, including some interesting Relics of the Expedition of Sir John Franklin. Third.—A "Singing Mous," which emits sounds similar to those of the Linnet. In addition to the above, all the other Exhibitions, Lectures, Dissolving Views of the late Battles, Diorama of Sam Slick &c. &c.

TO ARCHITECTS.

EXHIBITION and COMPETITION DRAWINGS, Coloured or Tinted, and LITHOGRAPHY in its various branches, executed by Mr. T. J. RAWLINS, Author of "Elementary Classes," adopted at Marlborough House; "Contemporary Architecture;" and Illustrator of numerous works. Specimens and estimates forwarded. 34, University street, University-college, London

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Dock Station, and sold at No. 1, Pryed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Courts. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the groups of the Alhambra Court. The Pompeian roofs is of Terra-cotta and cement combined. Since the execution of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHABLE ENGINE-PACKING, both round and flat, and SOCKET-RINGS for Hot-water-pipes. Vulcanized Rubber Door-springs, and Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Diving-dresses of superior make, and improved Valves for Rubber Suppers for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

THE PERMANENT WAY COMPANY, 56, Great George-street, Westminster, holding a number of patents relating to the construction and repair of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CLARK MAY, P.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

THE LONDON AND MANCHESTER PLATE GLASS COMPANY

Beg to inform the TRADE, that the EXTENSION OF THEIR WORKS being now completed, they are enabled to execute orders to any extent at immediate notice. The Company also beg to intimate that owing to improvements effected in the reconstruction of their Works, the COLOUR and QUALITY of their GLASS will be found to be considerably improved, and that they can guarantee the maintenance of these essential requirements. They further beg to invite attention to their reduced List of Prices, which may be obtained on application at their London Warehouse, or at the Works

For the convenience of the LONDON TRADE, a large stock of POLISHED PLATE is now kept at the COMPANY'S WAREHOUSE, BARRAUD'S WHARF, WHITEFRIARS.

The Works, Sutton, St. Helen's, January, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

CRYSTAL WHITE SHEET GLASS, first, second, and third quality, in cases of 200 feet, at 4d 5d, and 6d. per foot. Price-lists for squares cut to order forwarded on application. ROBERT METTAM and CO. Wholesale British and Foreign Window Glass Warehouse, 30, Princes-street, Leicester-square, London.

PLATE GLASS.—The Thames Plate-Glass Company's Works, Blackwall, manufacture Polished Plate-glass, ¼ inch to 4th thick, 18 feet to 19 feet long, by 10 feet to 7 feet wide, and any other proportionable smaller size. The tariff of prices just issued by the Thames Plate-Glass Company, is a great reduction of former prices. Contracts for the supply of large quantities are accepted by the Thames Plate-Glass Company, on the lowest terms of the day.—Address, the Secretary, Thames Plate-Glass Company's Warehouse, Savoy Wharf, Strand.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 298, Oxford-street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Established 1777.

CAMBERWELL, opposite the Rye-lane.—To Builders and Others.—Valuable Freehold Premises, and Plots of Land in the rear.

MR. PEAKE is instructed by the Proprietor to DISPOSE OF the PROPERTY by PRIVATE CONTRACT, which presents a favourable opportunity of creating a most lucrative investment by a small judicious outlay. A plan may be seen and further particulars obtained at Mr. PEAKE'S Office for the Disposal of Estates, 44, Tooley-street, Southwark.

BUILDING GROUND TO BE LET, in the best part of Euston-square, with a frontage of 170 feet; a populous and respectable neighbourhood; suitable for a church, chapel, public building, or dwelling houses.—For particulars apply to Mr GRAHAM, No 21, Taviton-street, Euston-square

FREEHOLD BUILDING GROUND, at OLD FORD, with Liberal Advances, to LET, suitable for fourth-rate houses, which, being much required in this rapidly-improving neighbourhood, let and sell as soon as completed.—For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 48, Penton street, Pentonville

TO BUILDERS.

TO BE LET, a few remaining choice PLOTS of LAND, upon the Burrage Estate, West Plumstead, near to the Royal Arsenal, Woolwich, for the erection of houses of from 300l. to 600l. value. These plots command a fine view of the Thames, and are surrounded by beautiful scenery. Money will be advanced, if required.—Particulars may be obtained at the Office of Mr. GEORGE HUDSON, Surveyor, Woolwich.

KENSINGTON GORE.—Valuable SITES for FIRST-CLASS MANSIONS in the NEW (Prince Albert's) ROAD, KENSINGTON GORE (with frontages to the Public property purchased by the Royal Commissioners for the Exhibition of 1851 as a site for Institutions connected with Science and Art), may be obtained upon ninety-nine years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

BUILDING LAND TO BE LET at NORWOOD, within three minutes' walk of the station, where fifty trains stop during the day. Water laid on, drains made, roads nearly completed, and a West-end line by the Crystal Palace will be shortly opened. The advantages of this situation, for pure air, beauty of country, and varied scenery, with unusually easy access to and from the metropolis, with trains running up to twelve o'clock at night, cannot be excelled. Houses are in great request.—For particulars and plans, apply to W. F. LOW, Esq. 67, Wimpole-street, Cavendish-square.

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's Wood. For particulars apply, by letter, post-paid, to W. L. No. 2, Craven terrace, Paddington.

ELIGIBLE FREEHOLD BUILDING LAND at NOTTING-HILL.—TO BE LET, at a low ground-rent, with immediate possession, with frontage towards Ledyard and Clifton-terrace, a very desirable PLOT of GROUND, suitable for third or fourth-rate houses, or the FREEHOLD to be SOLD.—For particulars, apply to H. NORTHCROFT, Esq. Surveyor, 40, Nottingham-place, St. Marylebone; or Mr. SHILCOCK, 30, Royal-crescent, Notting-hill.

WANTED, on the Thames, a PIECE of GROUND or moderate-sized RESIDENCE, between London and Chiswick. The ground must come right down to the water.—Address, stating locality, price, and size, to A. Z. A. care of Messrs. W. Thomas and Co. Advertising Offices, 19 to 21, Catherine-street, Strand.

TO BUILDERS.—Aldershott.—For SALE, several sites of BUILDING LAND, free of land-tax and tithes, situate at Ash, opposite the camp at Aldershott, commanding a most extensive view of this picturesque neighbourhood. The roads are laid out and plots marked, having frontages of 30 to 150 feet by 90 to 200 feet in depth, giving an opportunity for investment in building rarely to be met with. Terms, 10 per cent. down, and a monthly payment of 5s.—Plans, with prices affixed, may be had of Mr. MACKENZIE, Dover Arms, Ash; or of Mr. PULLING, 34, Southampton-street, Strand.

BUILDING LAND TO BE LET, at

HALLSVILLE	Term	1,000	years, for small cottages.
CANNING TOWN	"	1,000	" for small cottages.
NORWOOD	"	1,000	" for villa residences.
STRATFORD	"	100	" for small cottages.
FOREST	"	26	" for fourth-rate houses.

Advances 70l to 100l. at 5 per cent. on each cottage. Mr. WM. ELLISON, Architect, Stainsby-road, Limehouse.

TO MANUFACTURERS, WHARFINGERS, and OTHERS.—To LET, BEAUVOIR WHARF, on the Kingsland-road Basin, with Dwelling-house, Stabling, Sheds, and Offices. Extensive Water Frontage with good depth. Apply to LEA and CO. on the Premises, or at either of the Coal Depôts, King-land or Highbury.

TO BUILDERS, SPECULATORS, AND OTHERS.

FORTY ACRES of FREEHOLD BUILDING LAND for SALE, in one lot, or in plots 30 miles south of London, and a mile from a railway station. Subsoil, gravel; water excellent. A brickyard and sand within a quarter of a mile.—For terms and particulars apply to Mr. GEO. FULLER, Land Agent, 34, Great George-street, Westminster.

TO BUILDERS.—A gentleman intending to build a few semi-detached second-class PRIVATE RESIDENCES within four miles of the City, to each of which a good garden will be appropriated, will be prepared to consider any OFFERS for their ERECTION, ready for occupation, which may be forwarded by letter only, to X. M. P. Mr. Hammond's, 27, Lombard-street. The object is to supply comfortable, but plain inexpensive houses.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate or simple, Gothic, Elizabethan, productive or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified designs executed for the first houses, and from designs of architects of the highest eminence; wall-dressings, rich panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the tracings of each. The general decorations of Drawing and Dining Rooms, Libraries, &c, of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accessories and requisites to reception rooms of the first class, as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

FRONTS OF HOUSES, SHOP-FRONTS, NEW DESIGNS. Just published, price 21s. full size imperial 8vo

STREET ARCHITECTURE. By VICTOR DELASSAUX and JOHN ELLIOTT, in a Series of Designs for Shop Fronts and Facades, in Twenty-two Steel Plates, elaborately engraved, with explanatory Letter press.

London: JOHN WEALE, 39, High Holborn.

Now ready, in 1 vol. demy 8vo. price 7s. 6d. cloth.

THE HAPPY COLONY; with Bird's-eye Views of the Model Town and Colleges, and surrounding Farms. Dedicated to the Workmen of Great Britain.

By ROBERT PEMBERTON, F.R.S.L.

This is it: a most beautiful and perfect system of colonising that has ever been been devised, as it concentrates and unites all the grand powers of civilization. The education of the children is founded on the natural system, combining science with productive labour and the highest polish of manners.

London: SAUNDERS and OTLEY, Conduit-street.

NEWS.—The cheapest, largest, and best Family Newspaper, containing SIXTY COLUMNS of the LATEST NEWS, to the moment of publication, for TWOPENCE. NOTICE. On and after June 30th, LLOYD'S WEEKLY LONDON NEWSPAPER will be reduced to TWOPENCE. Sold by all News Agents; or if required by post, One Penny extra.

London: E. LLOYD, 12, Salisbury-square, Fleet-street.

THE TRAVELLER'S LIBRARY.

In 16mo. price One Shilling

MR. MACAULAY'S ESSAY on FREDERIC the GREAT. Forming Part 88 of the "Traveller's Library."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND REVISED EDITION OF MR. KEITH JOHNSTON'S GENERAL GAZETTEER.

In One large Volume, 8vo. of 1,460 pages, comprising about 50,000 Names of Places, price 36s. cloth; or half-russia, 42s.

A NEW DICTIONARY of GEOGRAPHY, Descriptive, Physical, Statistical, and Historical; forming a complete *General Gazetteer* of the World.

By A. KEITH JOHNSTON, F.R.S.E. F.R.G.S. &c. Geographer at Edinburgh in Ordinary to her Majesty. Second Edition, brought down to May, 1855.

*** In the present new edition omissions have been carefully supplied, and the number of abbreviations has been greatly reduced. Also a large portion of the volume has been re-written, and the remainder has been so thoroughly revised and corrected, that it may fairly claim to be considered a new work, the most recent and it is believed the most comprehensive of its class.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

TO BOOK CLUBS, READING SOCIETIES, AND READERS IN GENERAL.

Now ready, No. I. of

NOTES on BOOKS: being an Analysis of the Works published during each Quarter by Messrs. LONGMAN and Co.

The object of this publication is to enable book-buyers readily to obtain such general information regarding new books and new editions published by Messrs. Longman and Co. as they would derive from the perusal of well-arranged tables of contents or explanatory prefaces.

With this object each notice is confined to an Analysis of the Contents of the work referred to: critical opinions and laudatory notices are excluded.

Copies are sent free by post under the new Treasury minute to all secretaries, members of book clubs and reading societies, heads of colleges and schools, and private persons, who forward their addresses to Messrs. Longman and Co for this purpose.

*** The second number will appear on August 31st.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Second Edition, revised, in fcp. 8vo. price 5s.

PSYCHOLOGICAL INQUIRIES, in a Series of Essays intended to illustrate the Influence of the Physical Organisation on the Mental Faculties.

By Sir BENJAMIN C. BRODIE, Bart. D.C.L., V.P.R.S. Corresponding Member of the Institute of France, &c.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE EDINBURGH REVIEW, No. CCVII.

ADVERTISEMENTS and BILLS intended for insertion are requested to be forwarded to the Publishers on or BEFORE WEDNESDAY, JULY 4.

London: LONGMAN and CO. 39, Paternoster row.

NEW EDUCATIONAL WORKS BY A. KEITH JOHNSTON, F.R.S.E. &c GEOGRAPHER TO THE QUEEN.

This day is published, imperial 8vo. half-bound morocco, price 21s.

ATLAS of ASTRONOMY. By A. KEITH JOHNSTON, F.R.S.E., F.R.G.S., F.G.S., Geographer to the Queen.

Edited by J. R. HIND, F.R.A.S.

Eighteen beautifully coloured plates and descriptions. Also, an Edition for the Use of Schools, in 8vo. half bound, 12s. 6d.

By the same Author.

1. SCHOOL ATLAS of PHYSICAL GEOGRAPHY. Eighteen plates, with descriptive letterpress.
2. SCHOOL ATLAS of GENERAL and DESCRIPTIVE GEOGRAPHY. Twenty-two plates, with index.
3. SCHOOL ATLAS of CLASSICAL GEOGRAPHY. Twenty plates, with index.

The above are uniform in size, beautifully printed in colours by a new process. Price 12s. 6d. each half-bound

4. ELEMENTARY ATLAS of GENERAL and DESCRIPTIVE GEOGRAPHY for JUNIOR CLASSES, including a Map of Canaan and Palestine. Demy 4to. with index, price 7s. 6d.

"They (Nos. 1 and 2) are as superior to all school atlases within our knowledge, as were the larger works of the same author in advance of those that preceded them." *Edinburgh Times.*

"These two publications are important contributions to educational literature."—*Spectator.*

"Never before have young students of geography had advantage such as in these atlases are presented."—*Literary Gazette.*

"The whole work is adapted to the present state of geographical knowledge."—*Athenæum.*

"Decidedly the best school atlases we have ever seen." *English Journal of Education.*

WILLIAM BLACKWOOD and SONS, Edinburgh and London. Sold by all Booksellers.

Price 5s.

LIFE CONTINGENCY TABLES. Part I. On the Chances of Premature Death, and the Value of Selected Lives among Assured Lives.

By EDWIN JAMES FARREN, Secretary to the Gresham Insurance Company, Fellow of the Statistical Society, and one of the Vice-Presidents of the Institute of Actuaries.

"In the very able work before us, Mr Farren has proposed to himself the resolution of a problem looked at with much interest by persons familiar with the subject."—*Philosophical Magazine.*

By the same Author.

HISTORICAL ESSAY on the EARLY PROGRESS of LIFE CONTINGENCIES in ENGLAND.

"This and Mr. Farren's historical account in the 'Encyclopædia Britannica,' are the only ones of which we know that treat the subject at any length. Both Mr Milne and Mr. Farren are actuaries, readers of the works they cite."—*Athenæum.*

SMITH, ELDER, and CO. Cornhill, London.

Third Edition.

THE BUILDER'S FRIEND, Price One Shilling.

Office of "The Builder," and of all Booksellers.

MORTGAGES and LOANS ready to be ADVANCED upon Freehold and good Leasehold Property, in sums of 20*l.* and upwards; also upon Tithe Rent Charges, Absolute Reversions, Annuities, Life Interests, Government and Railway Stock, Debentures, Bank and other Public Securities, &c. for long or short periods—Apply to Messrs. The first Part will contain the Scenes in the Sea of Azoff, from sketches taken by Mr. Simpson, on the spot.

THE SEAT of WAR. By WILLIAM SIMPSON.

Messrs. PAUL and DOMINIC COLNAGHI and CO. 13 and 14, Pall-mall East, beg to announce that the First Series of the above work, dedicated by permission to her Majesty, is now complete in Forty Plates, price, neatly bound in cloth, plain copies, 6*l.* 12s.; coloured, 30*l.* 12s.

"Death is scarcely a subject of life or death in the Crimea that is not described upon by this lively and intelligent artist. You may here follow the soldier, finding something novel and characteristic at every stage of your progress."—*Times*, May 2d, 1855.

ARCHITECTURAL PUBLICATION SOCIETY. Part I. 1854-55, consisting of ILLUSTRATIONS to the DICTIONARY of ARCHITECTURE, will be ready at the end of the month. Members are requested to forward their subscriptions (1*l.* 1s. to the Treasurer, THOMAS L. DONALDSON, Esq. Bolton-gardens, Russell-square; or to WYATT PAPWORTH, Esq. 14a. Great Marlborough-street, Honorary Secretary.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 90, Westminster-Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An Illustrated price-list will be immediately forwarded, free, on application

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW 3, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen, &c and of "London as it is," offers his services in Tinted Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 23, Albany-street, Regent's-park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Boards. Terms—Day Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards. Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guilford-street, Russell-square

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s. per foot superficial with particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the suspension and other filtering stones. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Canuon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure; it is comparatively flexible, easily joined, has great power of resisting the effect of frost, and what is of still higher consideration, is perfectly innocuous. The production of desirable properties is produced by lining leaden pipes with gutta percha. Further information may be obtained on application to the Patentees, Messrs STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City-road, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 32, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

The Builder.

VOL. XIII.—No. 647.

THE addition of a vast collection of works of contemporary fine art to the great display of those of industry, is the one redeeming feature which will serve to stamp e Parisian Exhibition of 1855 with a character its own, and a lasting place in the records of tellectual development. No man interested the position which the nineteenth century ll some day hold in the history of the world ould fail to visit this great cosmorama, in ich he will find mapped out for his study all e leading landmarks of contemporary civiliza-n. In the majority of the subjects repre-nted, he will trace the affinities which link us the past, while in many a daring conception, ly realized, he will read the moral of the ssing moment. The sum of such indications, we take pains to interpret them rightly, rnishes the formula of immediate if not of timate progress. As a whole, the Fine Art hibition is infinitely suggestive; so much so, deed, that the critic is almost bewildered by e various claims upon his notice which its numerable details enforce. Fortunately, a collection of the more special scope of our rnal dictates the points of view from which readers will most probably desire that the bject should be approached on the present casion. While, therefore, we shall hope to dividualize a little in speaking of the archi-ctural contributions, we shall restrict our-lves to generalities in dealing with those of inting and sculpture.

The building which France has provided for e reception of 5,112 works of art, con-ibuted by 2,054 artists, representing no less an 28 different nationalities, is admirably apted for its purpose. The light is every-here excellent; and, although the whole of the nstruction is of a very temporary character, ere is no external evidence of shabbiness or relessness of design. The façade is agree-ble, and the tint which has been selected for e interior, a dark sage green, is well adapted bring out the colour of the pictures, while it of so negative a character as to retire from e eye, and in no wise to draw attention to the chitectural forms, which have been kept as mple as possible. Commencing with painting, e have to remark, that the general relative merical proportions which have obtained tween the works of the different nations are follows:—Austria, 52; Nassau and Baden, ; Bavaria, 65; Belgium, 224; Denmark, 5; cily, 5; Spain, 84; the Pontifical States, 13; e United States, 39; Great Britain, 376; the rand Duchy of Hesse, 4; Mexico, 1; Holland, ; Java, 1; Peru, 5; Portugal, 23; Prussia, 37; Sardinia, 26; Saxony, 12; Sweden, 25; orway, 16; Switzerland, 94; Tuscany, 6; urkey, 1; the Hanse Towns, 18; Wurtem-erg, 9; France, 2,060, that is to say, early twice as many as all the other nations it together. To her, therefore, we give recedence, since not only her extent demands , but her merits justify it.

Deprived by some of those foolish *caprices artiste*, which, if annoying at the opera, are in-olerable in the atelier, of the valuable co-opera-ion of MM. Ary Scheffer and Paul De la Roche, rance has fallen back upon MM. Ingres and oorace Vernet for *chefs d'orchestre*. With ne exhibition of the first of these two gentle-en, each of whom is allotted a gallery to him-lf, all who love refined drawing and sentiment ust be eminently gratified. As one of the favourite pupils of David, M. Ingres forms the principal surviving link between the old and new French schools, and his series of works, which spread over almost the whole of his long and laborious life, evidence the minute shades of progress by which the transition has been effected. His portrait of himself painted in 1804, shows how early he acquired perfect mastery over the difficulties of his art, and his "Vierge à l'Hostie," painted exactly fifty years afterwards, evidences how gently time has laid its hand upon his. The most popular work of the series, and that probably which best exhibits the taste and sweetness of the painter, is his well-known Venus Anadyomene. M. Horace Vernet maintains in all his works his invariable characteristics of power, and "*Luca fa presto*" brilliancy of execution. After the two field-marshals crowd swarms of generals of division, some commanding the "heavies," in the shape of history and epic landscape, and others the lighter troops of *genre*, and *paysage* under its more playful aspects. Gudin, Biard, and Isabey head the marines; while Alexandre Decamps manœuvres with a select company of Bashi Bazouks and miscellaneous Orientals of his own. Couture's masterpiece, "The Decline of the Roman Empire," and Muller's "Entry of the Emperor to Paris in 1814," and "Summons of the last Victims of the Reign of Terror," stand out amid the whole collection as the grandest historical pictures of the age, next after Kaulbach's series at Berlin. In every other department of pictorial art, the English school maintains, to say the least, an equal footing with the French; but in the very highest class of composition, the severe academic training to which the leading artists are subjected in their youth tells with a force upon their manhood that our more desultory education in art cannot rival. In the extreme of littleness, as in the extreme of greatness, the French are most excellent, since Meissonnier and Plassan are almost as unrivalled as Couture and Muller. Between these two poles lies a tract of country the leading features of which it would take pages, not lines, to indicate: it may suffice to commend especially to the student's notice the landscape and cattle pieces of Rosa Bonheur and Troyon; the colour and effect of Diaz; the historical compositions of Eugene Delacroix, Leon Cogniet, Abel de Pujol, Flandrin (whose exhibition does not do his great talents justice), and Henri Lehmann; the landscapes of Ciceri, Huet, Le Poitevin, &c.; and the *genre* pictures of Hebert, Glaize, Hamon, Eugene Lami, &c. Neither by any means let him omit, as he values fair faces, to look at Winterhalter's large group of the Empress and her Ladies of Honour.

Next in importance to the French comes our own school of art; and it is a matter for just pride to us all that it should come out of this peaceful tournament not only unscathed but with fairly-earned laurels. It is not necessary here to dwell on the well-known merits and peculiarities of our popular painters: upon the French press, however, they have fallen as a nine days' wonder. In spite of the denunciations of Mr. Ruskin, the world delights in the English school, and most especially in the works of its Academic representatives. The French artists generally acknowledge the genius of Millais and of Hunt, and regret that it should be doomed to shine through clouds of quaintness and mannerism. Their admiration for Mulready, Landseer, Leslie, Dyce, Roberts, Creswick, Linnell, Lewis, and Haghe, are unbounded.

Germany has by no means added to her reputation by her exhibition: the interval is so great between the ambition of her artists and their powers of performance, that we are tempted to regret that they should aim so high to fall so short. Cornelius is divine in thought, but full of exaggeration and hardness of style. Kaulbach is certainly a noble draughtsman, filled with happy inspirations, and unrivalled at a cartoon, but with a brush his manner is laborious: his manner of painting is opaque, and the highest dignity or energy of expression fails to animate his forms of leathery flesh. The two, however, with all their faults, stand among their contemporaries as giants; and, by dignity and moral elevation, such truly epic works as Cornelius's series of cartoons for the Campo Santo, at Berlin, and Kaulbach's, for the museum at the same place, throw all surrounding studies into the shade. It is principally owing to the evidence of labour shown by extreme artificiality of composition, and to an elaboration of painting which extinguishes vigour of handling and purity of tint and texture, that even good and well-educated artists, such as Hubner, Mücke, and Führich, fail to produce the powerful impressions on the mind at which they aim. It is but just to Prussia to remark that she is far ahead of both Bavaria and Austria. The latter falls below par altogether.

Belgium is unquestionably the most rising school of the day; and, in pleasing *genre* pictures, she exhibits a very high order of excellence. A more graceful specimen of this class than Willem's "Interior of a Silk-shop in 1660," we have rarely met with. Van Schendal's clever artificial light effects, and Verboeckhoven's cattle, are well known and generally esteemed in this country. Madou's picture of some young gallants disturbing a country *fête* is full of talent; and Dyckmans, Stevens, Bossuet, Portaels, and Leys, contribute works of much merit. The tendency against which this school has to be most upon its guard is that of over-finish, degenerating into teaboardism. Holland is perhaps in greater danger from the same temptation than Belgium. Many of the pictures exhibited by the modern Dutch masters are almost worthy of the old, and that must be looked on as no mean praise. Spain sends a considerable number of paintings, some of which are interesting, from the scenes and episodes of national manners represented; few rising above mediocrity. The portraits of Madrazo are to be distinguished for vigour of treatment and life-like execution. From Portugal much was not to have been expected; but of America we certainly had hopes, destined, however, to be grievously disappointed. Healy and Rossiter have a reputation in America, but they are neither of them likely to obtain much upon this side of the water.

In sculpture there is not very much that is novel: the boldest attempt is a colossal work by Kiss, of Berlin, representing St. George and the Dragon. There are points of great merit in it, though it by no means rises to the beauty of the Amazon. It is to be regretted that the cast has not been bronzed, as, both the composition and manner of modelling being adapted for that material, the general effect of the whole is much impaired by its being seen in its plastery whiteness. There are, for instance, many details, such as the veins on the horse's neck, the scales of the dragon's skin, certain parts of the armour, &c. which have been exaggerated, in order to keep their place in the dark-coloured material, and which are so defined by the bright lights and shades of the white material, as to interfere with the expression of the whole, which, to be effective, required concentration and repose. At present, these details fret the eye, and scarcely allow a correct judgment on the group to be formed. Most of the works exhibited, and almost all the best, being included in the Sydenham collection, we need not dwell upon the Paris series: suffice it to say that no very shining light has manifested itself, and that both have reason to regret the apathy of Tenerani, who appears resolved to allow his light to shine only for those who pay him. It certainly seems a pity that the works of an

artist who, by his genius and studies in the atelier of Canova, is identified with Thorwaldsen, Rauch, and Gibson, should be so little known out of his own country.

In architecture, on the whole, we regret to say, the display is inadequate to the present position of the art. Although the French exhibit no less than 183 series of drawings, the whole, with two or three exceptions, may be divided into studies of existing monuments and designs for restorations. The Institute of France contributes a selection of the admirable studies made of ancient remains by the gold medal students in Italy and Greece; and the archives of the "Monumens Historiques" furnish a corresponding and much more extensive collection of studies of national archæology, representing the monuments of the country, not only as they exist but as they may be supposed to have existed in the days of their completeness and perfection. Each of these is certainly highly important, but neither can be accepted as an adequate illustration of the present state of architecture in France. Prussia is represented by a pupil of M. Didron's, who sends a design for an altar;—Denmark, the Roman States, America, Portugal, Norway, Switzerland, Wurtemberg, and the Hanse Towns, are not at all. Bavaria contributes only some sketches of houses by Professor Lange; Austria a few poor designs by Professors Vantini and Grueber, of Prague. Belgium musters but one second-rate architect to all her painters: Holland sends but three designs, none of which have been executed; and Spain forwards drawings only of ancient monuments. Great Britain alone vindicates the actual position of her national architecture: she alone takes cognizance of the existence of iron as a building material, and it is only from the details she furnishes of executed works that any idea can be formed of the nature of the wants and tastes to which it is the duty and province of architecture to minister in the nineteenth century. Nor is it alone the utilitarian side of the profession to which her illustrations tend, for all its varied and most recent aspects are taken cognizance of. In the Houses of Parliament and the Crystal Palace, represented, as to its construction, by Sir Joseph Paxton, and, as to its art, by Mr. Digby Wyatt, we have the most important recent works. In the Catholic Apostolic Church, by Messrs. Brandon and Ritchie; the church of St. Nicholas and the new Town-hall, Hamburg, by Mr. Scott; Peckforton Castle, by Mr. Salvin; St. Aidan's College, Birkenhead, by Mr. Thomas Wyatt; St. Stephen's Church, Westminster, by Mr. Ferrey, we have the happiest illustrations of the application of mediæval art to modern civil and ecclesiastical uses, so far as it has gone. Wilton Church shows how legitimately novelty may be derived from little practised styles; while the late Mr. Carpenter's, Mr. Scott's, Mr. Salvin's, and Mr. Clutton's drawings show how judiciously we often effect our restorations of the past. Mr. Bunning, Mr. Lockyer, Mr. Hardwick, Mr. Gibson, Mr. I'Anson, and Mr. Fowler illustrate the application of art to the requirements and adornment of the business part of the metropolis. Mr. Falkener and Professor Donaldson show that in all our practical labours we are not unmindful of the lessons to be derived from the severest study of the antique. Mr. Penrose's drawing of Lincoln Cathedral, Mr. Allom's designs for river-terraces, Professor Cockerell's noble visions, Mr. D. Wyatt's studies at Rome and Subiaco, and Mr. Owen Jones's masterly views in the Alhambra, show that there are artists in the profession, in the most practical sense of the term.

France, we must repeat, has not done herself justice in her Exhibition, and has missed an opportunity which may never again occur. We look in vain for any indication of the nature of those great works which have drawn upon Paris the eyes of all Europe: we recognise not a spark of that fervid imagination which has created an eclectic style of street architecture almost original. If French architects were to be judged of by the present exhibition alone, they would be set down as pedants, whose studies were equally laborious and barren. This is so absolutely contrary to fact, that however much we may be constrained to admire the learned and beautiful drawings shown, we cannot but protest altogether against accepting them as a fitting architectural exhibition for her. The archæological and classical knowledge, as well as the artistic power, of MM. Viollet le Duc, Duban, Paccard, Caristie, Duc, Labrouste, Lefuel, Normand, Vaudoyer, poor Tetaz, Daly, Thomas, Lassus (with M. Hittorf, the flower of the architectural ability of France), are well vindicated, but not one of them exhibits an indication of ever having executed an original work in all their days. M. Duban, for instance, contributes drawings executed many a long year ago, showing admirable taste; and if we are to accept this exhibition as an exposition of the contemporary architecture of France, his country has never benefited by such abilities; and so far as practical matters are concerned, his name has been written in water. The jury will be placed in a position of exceeding difficulty, for they will either have to ignore the ablest men of the present day, or they will have to give their best medals for antiquarian studies, treating with extreme unfairness those who have contributed elaborate drawings of original works designed and executed by themselves. In fact, they will have at starting to choose between rewarding drawings or rewarding designs. The only exceptions among the French contributions to the studies and restorations are the drawings of a Byzantine Church, by M. Questel; a fountain, by M. Driollet; and some buildings for the Zoological Society of London, by M. Perrot. The first of these, the Church of St. Paul, at Nismes, is a fine building which was begun in 1838, and completed in 1849. It has been admirably decorated in colour, under the architect, by M. Flandrin, the painter of the Grand Procession in St. Vincent de Paul, and by M. Denuelle, who exhibits a number of beautiful studies made during his period of study in Italy. The second is agreeable and well drawn, and the third is of but little importance. These three subjects, with some studies on lunatic asylums, by M. Philippon, and on dwellings for the labouring classes, by M. Gourlier, are all that exhibit the practical tendency of the grand apparatus of study so abundantly set forth.

It is well for the architects of Paris that the city itself, with its noble monuments, so admirably supplies visitors with means of estimating the present highly advanced state of practical architecture in France, for they might certainly look in vain for any indications of it in the Palais des Beaux Arts.

CRYPT AT MERCHANT-TAILORS' HALL, THREADNEEDLE-STREET.

NOTWITHSTANDING the demolition of the remains of Old London by fires, improvements, and other causes, there still lie below the present surface many interesting vestiges, concealed in coal-cellars and other dark labyrinths unknown in many instances even to those who are living immediately in the neighbourhood of them, and it is in many cases only when the light of day has been thrown into such places, when making alterations, that these matters are brought under the public notice. Notwithstanding the endeavours of a few, many objects of interest have been removed and destroyed without any record at all. This is to be regretted, and its recurrence for the future might easily be remedied. The Corporation should depute some qualified person to watch over and preserve such objects of antiquity as may from time to time be discovered; and these ought without delay to be removed to some place appointed for the reception of such fragments as are portable, and of sufficient interest.

In the present instance we lay before our readers engravings of the remains of one of the halls of an ancient and honourable City Company which has numbered amongst its members Edward III. Richard II. Anne, his queen Henry IV. Henry V. Henry VI. Edward IV. Richard III. and Henry VII. Charles I. was also a brother of the craft; so was James II. Since this reign none of the kings or queens of England have been free of this Company, but a host of personages eminent for rank and talent have been admitted as members. Amongst these not the least worthy were honest John Stow and Speed, the chroniclers, both tailors by trade. Prince Albert is amongst those recently admitted to the Merchant Tailors' Company.

In glancing over the above list of royal persons we fancy pictures of many a rare feast composed of "capons of hic grece," "fesaunts," "heronsaus and bitrons," "breves," "frysh and salte venison," and other vives, the table thronged with the varied costumes of the times, the background formed of the fitting architecture of the old hall. In this hall, in addition to the admission feasts of the above kings, July the 16th, 1607 (the day of election of masters and wardens of the Merchant Tailors' Company), was kept with great solemnity and feasting. King James I. with Prince Henry and divers honourable personages, dined at Merchant Tailors'-hall, and were entertained with great variety of music, vocal and instrumental, and speeches. The king dined in the chamber called the king's chamber. Then the master of the company, John Swinnerton, attended, with the four wardens and other eminent aldermen and citizens, and after a speech gratulatory made to the king by Sir Henry Montague recorder, presented him with a purse of gold; and Richard Langly, clerk of the company, delivered unto his Majesty a roll, wherein were entered the names of such kings and nobles, and other great personages, as had been free of their company, viz.,—seven kings, one queen, seventeen princes and dukes, two duchesses, one archbishop, thirty-one earls, five countesses, one viscount, twenty-four bishops, sixty-two barons and lords, two ladies, seven abbots, seven priors and one sub-prior, omitting a number of knights and esquires.

The king then said, that he was free of another company, yet he would so much grace the Company of Merchant Tailors, that his eldest son the prince should be free thereof; and that he would see and be a witness when the garland should be put upon his head; and then they resorted unto the prince, who dined in the great hall; and the Company presented him with *another purse of gold;* and the clerk delivered his roll. And his highness said, that not only would he be free of the Company, but many other of his lords; and commanded one of his gentlemen and the clerk of the company, to go to the lords present, and to require of them that loved him, and were not free of other Companies, to be free of this Company; and so were accordingly made free twenty-two earls and lords, and a great many clergymen, knights, and esquires.

At the time of this feast, Threadneedle-street must have presented a picturesque appearance, contrasting strangely with the present bustling thoroughfare. One would like to see an engraving of the Merchant Tailors'-hall before the time of the Great Fire, thrown into relief by the carved gables, projecting signs, and the other characteristics of ancient London. Respecting the old hall Stowe says, "Some distance from St. Martin Outwich Church is the Merchant Taylors' Hall, appertaining to the guild and fraternity of St. John, Baptist, time out of mind called of Taylors and Linnen Armourers of London; for King Edward I. in the twenty-eighth of his reign, confirmed this guild by the name of the Taylors and Linnen Armourers, and also gave to the brethren thereof authority every year at Midsummer to hold a feast, and to choose a governor and master, with wardens. When, upon the same year 1300, on the feast-day of the nativity of St. John, Baptist,

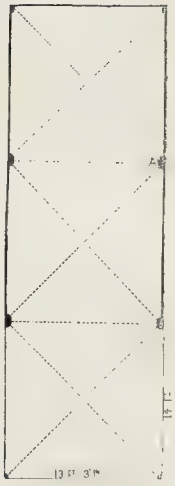
CRYPT, MERCHANT TAILORS' HALL, LONDON.

hey chose Henry de Ryall to be their pilgrim; or the master of this mystery (as one that ravelled for the whole Company) was then so alled, until the 11th year of Richard II. and he four wardens were then called purveyors of lms (now called quarterage) of the said fraernity."

This Merchant Taylors'-hall, some time peraining to a worshipful gentleman, called Edmund Crepin (Dominus Crepin, after some record), he, in the year of Christ 1331* (the ith of Edward III.), for a certain sum of money o him paid, made his grant thereof by the name f his principal messuage, in the wards of Cornhill and Broad-street (which Sir Olivar ngham, knight, did then hold), to John Makesly, the king's pavilion-maker. This is alled the *New-hall*, or Taylor's Inn, for a ifference from their old hall, which was near he Red Lion in Basing-lane.

The list of donors to the Merchant Tailors' Company is very lengthy: amongst them we ay, however, mention the name of Thomas utton, citizen and tailor, of London, who by is will dated May 25th, 1432, gave to the Company a certain lane called "Gressynghamane, as they lie in length from Thames-street to he Thames, to have to the Masters of the Fraternity and Custodes of the same, and to heir successors for ever, to relieve and maintain the poor brothers and sisters of the same Fraternity, to pray devoutly for his soule *in erpetuum*."

He also gave to the same Company all his ands and tenements in the parish of Trinity-he-Less, and a lane called Trinity-lane.



The old hall was partly destroyed by the Great ire of 1666, and a new structure erected, the ntrance to which was by a richly carved and otherwise ornamental doorway. This was emoved a few years since, and within a short me the hall has put on a new face, correspondig with the style of recent improvements.

The hall erected after the fire is of large size nd noble proportions, enriched with stained lass and paintings. The present roof of plain lanking is, however, a sad eye-sore. Formerly he roof was composed of a panelled ceiling, art of which, not long ago, ten days before the me appointed for an important feast, fell down —fortunately in the night—with a tremendous crash. Workmen were immediately set to work to remove the whole of the plastering, and within the ten days the present ceiling was fixed. It is a pity that such haste was necessary: the effect is beggarly: it might, however, be improved by the judicious application of colour.

The kitchen, at which we take a peep on the way to the crypt, may be older than the time of the fire, probably about the time of Henry VIII. On a conspicuous part of the wall is the excellent motto—"WASTE NOT, WANT NOT." There are some pointed arches and windows, and also two corbels, visible. The crypt is at a considerable depth below the kitchen, and has been used for some time past as a coal-cellar: the walls and filling in between the groins are of chalk; the proportions may be judged of by the engravings.

CORBEL.

PLAN.

Some alterations are being made on the premises of the Company, under the direction of Mr. Hardwick; and it was during the execution of these, that the crypt was brought into notice. We are glad to hear that the Company have determined on preserving it.

About 7 feet from this crypt, and under the late open yard of the hall, another old vault has been recently discovered: it is 7 feet wide, and quite full of garden mould. The walls are of chalk-rubble, and the voussoirs of Kentish rag.

Let us note in conclusion, that the Merchant Tailors' Company have always shown a consideration for literary men, and have done much for general education.

* This is about the date of the crypt engraved.

THE NEW CHURCH AT ISLEWORTH. — The first stone of this new edifice was laid on Monday last.

THE METROPOLITAN BUILDINGS BILL.

We have now before us the Metropolitan Buildings Bill, "as amended by the Select Committee:" but whether or not it will be carried through this session, appears still doubtful. Comparing it with the Bill originally brought in by Sir William Molesworth, it will be seen that it has undergone so many changes as to be no longer the same measure. As we have already said, it is in most respects very greatly improved: many of the objections that we pointed out have been remedied: some of them at the last moment, as for example, the dangerous exemption from control of detached buildings. The exemption of greenhouses ought not to remain unlimited, especially if they are not detached: it should be stipulated that no part of the enclosure should be of wood excepting the doors and sashes, and that the chimney, shaft, &c. should be in accordance with the directions of the Act. Clause IX. which excepts from the operation of the Act works done for the purpose "of necessary repair," would lead to differences of opinion, and so, for the sake of all, should be more clearly defined. As it now stands defective walls might be taken out and rebuilt, or tampered with without supervision. The exception of "necessary repairs" should apply only to woodwork, plastering, or other superficial covering. By Clause XXV. it is required that "the eaves or cornices to any overhanging roof" shall "be of brick, tile, stone, slate, cement, or other fire-proof material." This will put an obstacle in the way of the most natural and proper mode of roofing, and ought not to be insisted on. It is true the clause says, "unless the Metropolitan Board (the Board *to be* appointed under Sir Benjamin Hall's Bill for the better local management of the Metropolis) otherwise permit;" but it would surely be much better legislation to settle the matter by the Buildings Act itself.

Very great powers are confided to this Board, even to the extent, with the consent of her Majesty in council, of altering "in such manner as they may think fit, the Rules for the Regulation of the Thickness of Walls;" and to give to any district surveyor such a fixed salary as they may determine by way of remuneration, instead of fees. This can scarcely be deemed justice to the surveyors appointed *previously* to the passing of the Act, and will doubtless be reconsidered when the House goes into committee on the Bill.

Touching the rules for determining the thickness of walls, the formulæ originally prescribed have been abandoned, and tables are substituted showing the thickness required according to the height and the length of each wall. The rules have an advantage over the schedules of the present Act, but they seem to involve various strange anomalies, and are modified by so many provisions that we fear they will be found very troublesome,—to use no stronger term. Mr. Thomas Cubitt, Mr Piper, and Mr. Wales (as secretary of the Builders' Society), gave evidence before the committee in favour of the proposed schedules as they now stand.

The official referees and registrar are to be compensated, as a matter of course, for the loss they will sustain; and we are glad to observe that the appeal we inserted in favour of the clerks and others employed in the Office of Metropolitan Buildings has not been made without effect.

MR. EDITOR,—A comedy in real life is proposed to be performed in 1856, by H. M.'s servants, the district surveyors, if the order of her Majesty and both Houses of Parliament can be obtained. It is to be in one (the Metropolitan Buildings) Act: will you kindly insert three of the scenes, and oblige a

DISTRICT SURVEYOR.

N.B. The author of the Act is not one of the performers.

Scene 1.—*The District Surveyor's Office.*

[The District Surveyor discovered alone at his desk, in a despairing mood over the schedule.]

D. S. (concluding his meditations). Well! I suppose my duty is to try to induce the public to think this schedule a model of perfection. Such, then, shall be my endeavour.

Enter a Builder of small Houses.

Builder. I want to build a small two-story house, and to ask you whether I understand aright Schedule 1, part 2, rule 2, horizontal column 9; vertical column, 2. I intend to build my party-walls 8½ inches thick, as they will be only 23 feet high, and 26 feet long.

D. S. The Act will not allow it.

B. Why? *There* is the rule.

D. S. So it *is*, but it cannot be used because of Rule 6.

B. Then why is it in the Act?

D. S. I suspect it was put there as an architectural ornament, because the table would not have looked so well without it. I believe, too, it has been endeavoured to make the schedule ornamental, to compensate for the Act restricting very much the external decoration of the buildings themselves.

B. But I am a practical man, and want a practical Act. Is there no remedy?

D. S. Yes. The Legislature in its wisdom, foreseeing that difficulties would occur, specially provided by the 52nd section for the repeal of the schedule and enactment of another without the interference of Parliament. You had better, therefore, apply to the Board of Works.

[*Exit Builder towards Whitehall.*

Scene 2.—*A large Dwelling-house in course of Erection.*

Enter Mr. P. (*an eminent Contractor*), *and the District Surveyor.*

P. What is this notice which you have given me, as to my building being wrong? You say the walls of this story are not thick enough, and that I must either raise the story to a height of 25 feet, or lower it to 18 feet, and then my 13-inch walls will do; but that they will not do for the story 20 feet high as at present. This is against common sense (indignantly).

D. S. The Act requires it. Schedule 1, part 2, rules 5 and 9.

P. Then the Act is against common sense?

D. S. Oh, no! that cannot be; and besides you spoke in favour of this schedule last June, at the Institute of Architects.

P. So I did. But can you reconcile the rules with common sense?

D. S. Not with common sense. But setting that aside, cannot you perceive some analogy between the Act and a Quadratic Equation, the solution of which you know always gives two results?

P. I see. The Act is doubtless right. So I will make my walls thick enough by raising them 5 feet higher. Thank you for your courteous explanation.

Scene 3.—*An Architect in his Study, designing a House. Soliloquy over the Buildings Act.*

A. The rules for the thickness of walls of dwelling-houses were calculated so as to make them about one-fifth *thinner* than the walls required for public buildings. It is curious that in working out the rules, the walls should actually be required to be much thicker. I suppose that in mathematics there is always a difference between a thing before involution, and after evolution. Here comes the District Surveyor; I will ask him.

Enter District Surveyor.

A. Mr. D. S. If I build a building strong enough for a public building, may I use it as an ordinary dwelling-house?

D. S. Reason would say so.

A. But what says the Act?

(The architect explains his case.)

D. S. No. Your walls must be thicker for the dwelling-house than for a public building.

A. Then the Act is contrary to reason.

D. S. (At first at a non-plus, but recovered by a happy thought) Oh, no! On the banks of the Cam they have two kinds of reasoning, one of which is called the "reductio ad absurdum," and was adopted in the case of the Buildings Act, which is highly scientific. Good bye.

[*Exit in haste to avoid further inquiries.*

PROTECTION OF IRON FROM OXIDATION.—Mons. Paris, it is said, has discovered a vitreous enamel, which will stand the test of any chemical or physical action to which it may be subjected. Experiments, it is added, fully prove that the adherence is perfect, and that the enamel resists the most violent shocks without cracking, although the iron it covers may be completely bent; and it does not peel off or take fire by the action of heat; while concentrated acids can be kept at the boiling point for a considerable period in vessels protected by it. Iron may thus be used where glass, silver, gold, or platina only has heretofore been employed. It is also proposed to apply the invention to the lining of water and gas-pipes, covering roofs, and sheathing ships, anchors, &c.

INCISED SLABS AND PAVEMENTS,

WITH A VIEW TO THE USE OF THEM.

It is a matter surely to be regretted, that the artists of the Middle Ages, generally so profuse in their legacies to posterity, should have been so parsimonious with regard to those historiated pavements of incised stones which formed by no means the least valuable ornaments in some of the largest cathedrals, and by which the forcible outlines of the Egyptian hieroglyphics and the Etruscan vases are brought back to our recollection.

A few scattered, half-defaced slabs, long removed from their original position, with one or two scanty notices of the Benedictines, serve rather to suggest what we have lost, than to afford us many data for any reconstruction.

It is probable, however, that even in the thirteenth century the extreme amount of cost and labour demanded for the production of incised stones prevented their frequent employment in large masses, such as pavements; although as tombs, consisting of single slabs, they are sufficiently common all over Europe.

Dante gives a curious proof of this: describing the examples of the punishment of pride incised on the marble floor of the first circle of the hill of Purgatory, he compares them to the slabs on the floors of the churches, which exhibit the image of the person such as he was when alive, by which it would appear that figure-subjects were in his time for the most part employed for monumental purposes. For had such a mode of treatment been common in the pavements of the churches of Florence, or of his own "bel San Giovanni," he would doubtless have referred to them.

The marble plan of Rome, now in the Capitoline Museum, which anciently formed the floor of the temple of Remus; and an obscure allusion by Pliny to the pavimentum scalpturatum, which he described as ornamenting the temple of the Capitoline Jove, as far back as the third Punic war, show that the origin of these pavements is to be sought at a time far anterior to the period of their greatest prevalence.

As regards the Middle Ages, we must refer the gradual employment of incised slabs to the increased difficulty of procuring the costly and exotic materials for the pavements of the Opus Alexandrinum and Opus Vermiculatum, which were so common in ancient art. Accordingly, we find incised stones first of all used in conjunction *with* mosaic, as in the tomb of William, son of Robert, the second count of Flanders, who died in 1109, a few years back discovered in the ruins of the church of St. Bertin, at St. Omer. This tomb was no other than a pavement of mixed mosaic: the principal feature was a cross saltire, the circles at the extremities of which contained stones with incised lions, the lines being filled up with a coarse cement; and if I remember rightly, an imitation in incised stone and mortar was in some cases substituted for the coarser mosaic. If we may believe the authors of the "Voyage Littéraire," the cathedral of Arras possessed in the choir a pavement of historiated stone, still more ancient than this example; but unfortunately the judgment of the Benedictines was so often wrong when they attempted to assign a date to objects of the Middle Ages, that it may well be permitted to doubt whether those "great hard stones on which the history of genius was represented in relief" were really constructed when the bishopric of Arras was separated from that of Cambray, viz. in 1095. In all probability they resembled those at St. Omer, and the deterioration of the cement would easily explain how they came to present the appearance of being in relief, especially when the edges became worn down.

We now come to the pavement belonging to the ancient cathedral of St. Omer. Although repeatedly taken up and removed from place to place, and still worse, injudiciously restored, it remains by far the most important example we possess, not only with regard to the quantity of the stones, but also to the importance of the subjects represented.

The choir, the chapels, and probably a portion of the ambulatory were paved with these slabs, the execution of which appears to have

extended from the end of the twelfth century to the latter half of the thirteenth. In 1608, the soil of all the east end of the church was raised, and they were then conveyed to the nave, where, being exposed to much rougher usage than in the choir, they rapidly decayed, until at last, after very many removes, the few, comparatively speaking, which have been left have found an asylum in the Chapelle des Antiquaires. Unfortunately it was decided that they should be restored before being finally deposited in safety, and accordingly a hot cement was run into all the hollows utterly irrespective of the ancient colours, while a few strokes of the chisel gave the requisite sharpness to any part that had become obliterated. After this it is needless to say, that the drawings are but shadows of what the originals must have been; indeed, it is probable that not a single line retains its ancient shape, not only on account of the restoration, for that was only partial, but from the fact that the ancient workman sometimes under-cut his incisions, or did not make them all of equal depth. Now, when these incisions came to be worn down, they would present a very different appearance from what they did when they were first executed.

The Italian work, on the contrary, is far better preserved, for the marble being a harder material, the lines were formed in the first instance by means of drill holes, and as they went in much deeper than the chisel, we can often ascertain the direction of the lines when they themselves have been utterly obliterated.

The slabs at St. Omer consist of three sizes, the sides of which bear the proportion, 1, 3, 5. The larger ones consist principally of portraits of the donors on horseback: these were varied by others containing nine figures of men or animals, in as many circles. Others, again, have interlacing foliage or shields. There are also some fragments of slabs much larger than any of these: they probably served as centres for the pavements of the chapels. One represents the burial of the Virgin, and the other is defaced.

Of the second size, the subjects are still more varied:—Armed elephants, the seven liberal arts, the signs of the zodiac, the labours of the months, the fables of Æsop, besides the usual arrangement of foliage, and circles, with animals in them, form the subjects. Unfortunately all the series are very imperfect. Thus we have only five out of the seven arts, six of the labours of the months, five of the signs of the zodiac, and only two of the fables.

As to the smaller stones, they are exceeding numerous, there being about seventy varieties. They represent various species of foliage; various subjects from the Bestiarium (the natural history of the time); some Minotaurs, which strongly recall the manner in which these metamorphoses are depicted in the "Ovid Moralisé," in the library at Rouen; and, finally, sundry subjects of satirical allusion, such as the ass playing on the harp.

It is not a little singular that in even those few dalles which have reached our time—the sole wrecks of this once magnificent pavement—we can almost trace the same thing that M. Didron fancies he has discovered in the sculpture at Chatres Cathedral, viz. the Speculum of Vincent de Beauvais, written in stone. Vincent de Beauvais divides his Speculum into four parts;—The Mirior Doctrinal, which teaches the seven liberal arts; the Mirior Historique, the history of the world; the Mirior Naturel, the study of nature; and the Mirior Moral, the different duties to fulfil and vices to avoid. The first is represented by the seven liberal arts, the second probably by the metamorphoses, the third by signs of the zodiac, the labours of the year, &c.; whilst the fourth is wanting, but probably has been destroyed, as it is impossible not to believe but that so common a subject as the battle of the Virtues and the Vices should have had a place in so large a pavement. It exists, however, at Canterbury, to which place I must now refer for the next chronological example.

In front of the shrine of St. Thomas à Becket remains a pavement of Opus Alexandrinum, unlike any other that I have ever seen—the porphyry, the serpentine, the piombino, and, indeed, the general lines tell of an Italian origin; but the intermixture of the black French slate, the brass fillets, the flattened circles, the fretted border in the centre, and the scale-like diaper in the angles, inform us that those materials have been put together by some western artificer, and not the "Petrus Civis," who about the same time had employed his skill at Westminster. Round this pavement, as a centre, there are now inserted about thirty-four small incised stones. Those drawn, although not in their original position with regard to each other, appear to have retained to some degree their ancient arrangement. Unfortunately it is almost impossible to make any restoration that would be completely satisfactory with regard to the angles of the opus alexandrinum; but that which presents the greatest probability would be to place the circles three deep on the north and south, two deep on the west, and none at all on the east, inasmuch as there does not remain sufficient room between the points of the mosaic and the furrow worn in the marble by the knees of the countless pilgrims who went, like Chaucer, to worship the blissful martyr. There are two lozenge-shaped stones, one containing four lions, in as many circles, and the other defaced, which help to fill up the space left between the angles of the mosaic and the indented marble above mentioned. The rest of the intervals, as well between the mosaic and the stones as between the stones themselves, were probably filled with the coarse mosaic of black slate, red French marble, and white close-grained stone.

The subjects are, as usual, the Signs of the Zodiac, the Labours of the Year, the Virtues and Vices, and chimerical animals.

No one of these series is perfect; but at the same time they are most valuable examples, both from the spirit of the drawing, and from the fact of their having escaped the restoration which has so lamentably disfigured the slabs at St. Omer; and indeed it was with great pleasure that I heard the architect of the cathedral, Mr. Austen, disclaim any intention on the subject, and I may here be permitted to thank that gentleman, not only for the facilities afforded me, but for sundry hints as to their ancient state and the sources of their material.

The next pavement of importance is now preserved in the church of St. Remi, at Rheims; it originally ornamented the space between the high altar and the body of the choir, of St. Nicaise. When this church, the *chef d'œuvre* of the celebrated architect Libergier, was destroyed by the Bande Noire of Santerre, they were sold with the rest of the materials, and for several years formed the pavement of a yard leading to a stable. However, some time ago, they were acquired by the town, and finally deposited in their present position.

These dalles differ from any of the others before described, inasmuch as the figures are formed of a single outline run in with lead. From the style of the drawing they can scarcely be earlier than the beginning of the fourteenth century, and we should probably not be far wrong in saying that they were executed under the superintendence of Robert de Coucy (the successor of Libergier), who died in 1311.

They consist of forty-eight lozenge-shaped slabs, each having a group incised on it representing some one of the Bible stories within a more or less complete quatrefoil. The series begins with the construction of the Ark, and finishes with the condemnation a second time of Daniel to the lion's den.

Mr. Tarbé, who has published these very interesting monuments, supposes that if the pavement was wholly composed of historiated slabs, we should want just as many again as those we possess; but I think it very doubtful if the whole of the slabs contained figures, inasmuch as we have several half ones, in which foliage is the only ornament.

In 1553, the Spaniards and Flemings succeeded in destroying Therouanne, a town about eight miles from St. Omer. Never, probably, since the introduction of Christianity, has a town been destroyed with such relentless animosity. The victorious Flemings carried off the works of art, and even the building materials, for trophies: thus the cathedral at St. Omer possesses a colossal figure of our Lord, with St. Mary and St. John, which came from the grand portal of the cathedral of Therouanne. In like manner, in the little village church of Blaringhem, there are about sixty incised slabs, nearly defaced, and inserted into the pavements without order. The tradition runs that they formed part of the spoils of Therouanne; and when we consider that broken pieces of them are found built up into the houses, it will be found rather easier to believe tradition in this case, when the same authority asserts, that the dalles of St. Omer came from a temple of Minerva, situated on Mount Sithieu.

As to the art of these stones we may observe, that they appear to have been executed a little later than those of St. Omer: the large ones consist of scenes from sacred history in circles and quatre foils, and the smaller in much the same subjects as those at St. Omer.

Another pavement is drawn in Willemin's work: it is there described as being in the Musée des Augustins. What became of it after the dissolution of the museum, I cannot tell. I do not remember ever to have seen it in any of the public collections in Paris, but most probably it is in the depôt at St. Denis. The design was a series of quatrefoils, touching one another, and containing foliage: the space between them was occupied by figures on a black ground, and the incised parts are stated in the text to have been filled up with bitumen.

I must now direct your attention to Italy, and there we find a somewhat different process applied: the body of the pavement is white marble, and the figures are detached by a black ground of the same material. If the ground is tolerably extensive, the black marble goes right through: if on the contrary it is small, a hole is cut in the white marble, into which a thin piece of black is then inserted: lastly, the lines of the drapery, the features, &c. are formed by incised lines, filled in with a black resinous cement. The two principal examples which occur to me are the Baptistery at Florence, and the Cathedral at Sienna. The former may almost be passed over; for though it contains a great many white slabs, with black ornaments, they are all mosaic; the only portion containing lines being a circle with the signs of the zodiac: unfortunately this has been so much worn, that little can now be made of it.

As to Sienna, we are much better off: it is certainly the only incised pavement tolerably perfect, and although of different dates, and consequently of different styles, it still retains its unity of arrangement. The first in order of time, are the representation of the Virtues, which are arranged round the altar: they are all referable, with one or two exceptions, to the beginning of the fourteenth century. The illustration represents Justice, surrounded firstly by a richly cusped circle, and then by a square border, at the angles of which are represented the winged lamps of knowledge. At the present moment I forget whether the Italians, who always know who did everything, or if they do not, always invent, refer the designs of these to Buoninsegna or Simone Memmi. However that may be, they are beautifully drawn, and are certainly without exception the very finest incised slabs which have come down to us. The rest of the church is thus mapped out. Rich borders run from pillar to pillar, both north and south, and east and west. These again enclose rich borders, separated from them by bands of plain marble. In the nave within these last, we find principally scenes from the Scriptures, executed during the latter half of the fifteenth century: some of them of latter date are attributed to Beccafumi. Others again are earlier, more particularly a curious collection of mediæval emblems of the Italian cities in opus vermiculatum, which probably dates considerably before the present cathedral. Other subjects are the Wheel of Fortune, the Seven Ages of Man, Socrates and Crates climbing the Mountain of Virtue; together with the ten sybils and figures of Faith, Hope, and Charity: these last and the sybils are placed in the aisles, and belong to the sixteenth century.

I have now, I think, given as correct an account as I can of the various pavements of incised stones that I have been able to make myself acquainted with, either by books or actua

inspection: that there are others I can scarcely doubt; more especially in Germany, a country so rich in the arts of the Middle Ages; but, neither have I seen them myself in that country, nor have I been able to find an account of any.

It appears to me very desirable that some endeavours should be made to introduce this beautiful description of pavement into the choirs and richer portions of our cathedrals and churches, and in some measure to substitute a material affording opportunities to the artist to embody his ideas, in place of what are now called encaustic tiles; which, however they may recommend themselves by the excellence of their manufacture, generally end by sickening us of their endless repetitions of the same rose, the same fleur-de-lys, and the same scroll. If this holds good with regard to our churches, how much more must it be with regard to our public buildings, where black and white marble pavements, and tiles with the badges of extinct dynasties, usurp the place of those representations of the history of a people which would indeed enable us to find sermons in stones.

I do not mean to assert that it becomes us to copy the errors of our forefathers in natural history and place them in our cathedrals. But the other sources of design remain equally open to us as to them: the Bible is the same now as then: the same virtues and the same vices affect us: the arts abstractedly are the same (would that their excellence were identical); so are the fables of Esop (for at least the beasts and birds have not changed their costume), and surely the modern discoveries in natural history would furnish us with beings as strange as any which ever presented themselves to the compilers of the Bestiaria. In fact, time has added to rather than diminished our choice of subjects.

Above all, in designing new subjects, we must be careful to the last degree to give them a sharp and energetic outline even when copying from nature; unless the subjects are really copied directly from nature, there can be no freshness or originality about them. In designing a group of figures, it will be necessary to have the living model and good stout cloth garments; for a man may copy mediæval figures for ever, and yet be unable to design as they did in the Middle Ages; for it is to be believed that then, as now, really good figures (and there were not a few of them produced in the thirteenth and beginning of the fourteenth centuries) were copied directly from the life. If monsters must be employed, why not follow the advice of Leonardo da Vinci, who recommends us in this case to copy parts of existing animals, and afterwards to join them together? but I think the giraffe, the kangaroo, and the apterix, would be as effective as any mediæval chimera; to say nothing of the resources we might derive from the antediluvian world: truth is always stranger than fiction.

Again, in designing an incised slab, our great aim should be to make the object cover the ground pretty equally, so as to leave no very large spaces of cement which would be liable to be worn into holes. When this cannot be done a small circle is left, so as to diminish the space and balance the composition. These little circles occur very frequently in the St. Omer slabs. When this space becomes larger, as in the Taurus, at Canterbury, they become quatrefoils; and when, as in the equestrian figures, it becomes still more extensive, a stem of foliage supplies their place. Another point to be considered is the termination of the lines of the drapery: they should never, if possible, end in a sharp point, but rather in a blunt point, with a nick at the end. The object of this is evident: the workman can get his drill or chisel to the end of the latter, whereas the former must necessarily be shallower towards the end, and consequently soon become obliterated in that part, especially when the stone has become worn down to the depth of an eighth of an inch, as the dalles of St. Omer have.

Again, the borders should be composed of a stout, strong network, of two or more scrolls: if a single scroll is used, figures should be introduced, to restore the proper balance, and give it strength. An additional amount of energy is got by not making the scroll homogeneous with the outer line of the border: a good strong line should be employed to divide them.

Altogether, I see no reason why incised slabs might not become the receptacles for the very best artistic talent we can procure,—only taking care always to preserve a certain energy of outline, for which we could find the most valuable hints in the Egyptian hieroglyphics and Etruscan vases.

Having designed our dalles, the next thing is how to arrange them. It will be perceived that the small ones have a plain border round each, which enables us to place them in juxtaposition, without requiring any intervening plain border: they can therefore serve as a ground in which to insert the larger subjects, or can form a subsidiary border round one of the intermediate-sized slabs, so as to enable it to range with the larger.

But of course the whole arrangement of a pavement depends on the disposition of the large subjects. Now these latter, in western Europe, are generally either lozenge-shaped or circular, and occasionally quatrefoiled. If the space required to be paved was small, such as the sanctuary of a church, a species of diaper might be formed by making the large dalles touch at their edges, as at Canterbury, and the examples from St. Denis, the interstices being filled up with plain dalles or mosaic or cement of a different colour. If the space is rather considerable, a more complicated form of diaper was adopted, as in Abbot Seabrook's tile pavement in Gloucester cathedral, where every alternate row of the diaper is made up of smaller and unequal members, thus affording ample space for detaching the subjects, by means of a plain border. When, however, the space was still larger, as a whole choir or a large chapel, it was divided into three or more longitudinal strips by means of borders: these borders were again filled with a diaper such as I have above described, only varied in each strip. The middle strip, of course, would be the widest, and contain the most important subjects; while those of subsidiary interest, such as the signs of the zodiac, the labours of the year, or the battle of the virtues and the vices, would be referred to the sides.

A border would run all round this composition, but I am very doubtful whether it would enclose the first and simplest; for the western artists during the Middle Ages were not over fond of borders, exhibiting thereby a great contrast with their Italian brethren who followed the antique, where the border often forms the largest part of the composition.

I should not omit to state that a large square subject was generally placed in the sanctuary before the altar. This, in Prior Crawden's Chapel at Ely, represents Adam and Eve; and M. Deschamps has very properly placed a great slab of the death of the Virgin in a similar position in his very clever restoration of the pavement of St. Omer. It will be perceived that I have been obliged to resort to tile pavements to find types for the general arrangement, on account of the deficiency of any example of incised stones remaining *in statu quo*. But I think that there could have been but very little difference between them in this respect, for the subjects show that the majority of incised stones were intended to be used lozenge fashion, in the same manner as we generally find the tiles arranged in the more perfect pavements which have come down to our own times. One word more on the cement, or as the French call it the mastic, with which the interstices are filled. An analysis has been made of that at St. Omer, by M. Tavernier: it was found to consist of lime, mud, pounded brick, rosin, and colouring matter; the rosin being in the proportion of one-sixth of the whole. It would appear that the materials, with the exception of the rosin and part of the lime, were made up into a kind of clay, which was burnt and ground into powder: it was then mixed with the colouring matter, the rosin, and the rest of the lime. The accounts of this process, which are repeated in the same words both in the work of M. Deschamps and M. Wallet, are rather confused; but the above appears to me to be the meaning, as far as I can make it out, inasmuch as two analyses are given and one receipt for the synthesis, which agrees with neither of the former.

M. Deschamps recommends the hot cement used by marble masons, and it is with this that the restoration has been made. M. Vandambosse, by whom the dalles of St. Omer have been restored, informed me that his cement was composed of one-quarter of wax, three-quarters of rosin, besides powdered stone and ivory black: however, he added, the workmen were not particular to a shade with regard to the proportions. Of this there is good proof in one of the large equestrian dalles fixed against the wall: in one place the cement has cracked, while in another it runs out like honey: however, it is but justice to add, that generally speaking it has stood very well. Probably where one colour only is to be employed, there is nothing superior to the modern Roman cement: unfortunately its tone is so strong, that any attempt to colour it would require so much pigment that all the strength of the cement would be destroyed. Parian cement is much better in this respect, but does not possess sufficient properties for resisting damp to recommend its use in any work required to last for centuries, as a pavement of a church.

I regret much that want of time has prevented me from making any experiments in this matter. That we can obtain a cement which will take colour and resist the damp cannot be doubtful in an age which is, par excellence, the age of cements: it can only require a little time and patience. I may here observe that M. Wallet, who describes the slabs before they were restored, enumerates the following colours as being visible;—brown of various tints; slate colour, more or less deep; brick red, more or less yellow; and bright red. One or two of the smaller slabs which have escaped the restoration, and are at present in the Museum, present us with a cement of a granulated appearance, like coarse gunpowder mixed with little pieces of brick. That at Canterbury is much finer, and there is less brick; but when it does occur, it is in much larger pieces.

If marble be used, probably the best thing would be to burn shellac mixed with colour in the incisions with a hot iron. The lead filling in, as in the St. Nicaise pavement, is much the most difficult of all, inasmuch as only a small portion of the lead is run at a time: in this case the incisions should be undercut, and small drill holes made in the angles, in order to prevent the lead from moving.

The principal objection to this last process is, that in course of time the lead oxidises on the surface, and becomes nearly the same tint as the stone itself: the best remedy for this would be to oil or wax the stones at intervals, much in the same way that oak floors are kept in order.

Thus there are really no valid reasons why these pavements should not share in the general renaissance of Christian art. Luckily there remains enough to enable us to effect this in all certainty; and it must be a subject of congratulation that what few examples have been spared to us belong to the golden period of Christian art and poetry—the age which presented us with the Cathedral of Beauvais, the Abbey of Westminster, the Niebelungenleid, and the divine Comedy.* WILLIAM BURGES.

INCISED PAVEMENTS.

CHURCH BUILDING NEWS.

Dunham.—The new church erected at Dunham Massey, by the Earl of Stamford and Warrington, was consecrated on Wednesday in week before last, by the Bishop of Chester. The church stands on high ground, on the Chester road beyond Altrincham, and close to Dunham-park. The foundations, according to the *Manchester Courier*, were commenced about four years ago, but before one-half of the length was put in, the design, which was intended to be realized in white brick, with ashlar dressings, was abandoned. In September, 1851, the agent of the Earl wrote to six architects, in London and Manchester, inviting them to furnish designs for a church to be built of stone, adopting, as far as practicable, the foundations already put in; and the successful competitor was Mr. Harley, of Manchester, architect, from whose designs the church is now built. The style is perpendicular, and the plan cruciform, consisting of a nave, lighted from clerestory windows; north and south aisles, lighted by three-light windows, the tracery of which is of different designs; transepts lighted by three-light windows, and a chancel lighted by nine windows, varying in size and design. On the south side is the Stamford chapel, lighted by two two-light windows. A tower and spire rise from the intersection of the nave, and the transepts and chancel ascend from four moulded stone piers to an altitude of 210 feet, surmounted by a cross. The spire has enriched flying buttresses. At the east end there is a large seven-light window. The west end window is divided into five compartments, filled in with tracery. Under this window is a large doorway, with square head over a moulded arch. The other entrance to the church is through a porch on the south side. The exterior is built of wall stone from the neighbourhood of Sheffield, with ashlar stone dressings from Hollington. The first object which attracts the eye on entering the church, is the stained glass window at the east end, over the altar. In the openings of the arched head in this window is the emblem of the Holy Lamb with the monogram of "Jesus Christus." In the upper panels are angels bearing the instruments of the passion, and others in adoration. The smaller are filled up by scrolls and ornaments on a ground of ruby colour. The square portion of the window contains fourteen large openings, arranged in two tiers, of seven openings in each. In the centre of the upper range is the whole-length figure of our Lord. The other figures ranging with this are St. John the Baptist, the four Evangelists, and St. Peter. The centre compartment of the lower tier is occupied by the figure of St. Paul, the others by prophets, each bearing an inscribed scroll. In the general tone of this window the ruby prevails. All the figures stand under canopies. The west window contains two ranges, of five openings in each. In the centre opening of the upper range is the figure of the Virgin and child. The other four figures are those of Mary Magdalene, Mary the mother of James, Salome, and Elizabeth. The centre compartment of the lower range has the figure of St. Margaret, to whom the church is dedicated. The other four are Deborah, Ruth, Esther, and Dorcas. The prevalent tone of this window is sapphire. All the figures, as in the east window, stand under decorated canopies. The other windows are frosted with stained glass borders. The whole of the internal fittings are of oak, and the pews throughout have open ends. All the pews are furnished with cushions, stuffed with curled hair, and covered with scarlet morocco cloth, having the appearance of morocco leather. The extreme length of the building is 130 feet, and the width, exclusive of the transepts, 60 feet. The church will accommodate 700 persons, 200 free. The gas standards and metal work were designed and manufactured by Messrs. Skidmore and Son, Coventry. The tower contains a peal of ten ringing bells in the key of C. The weight of the tenor is 27 cwt. 3 qrs. The total weight of the ten bells is 123 cwt. 2 qrs. 10 lbs. There is also a set of fourteen bells for chimes, shortly to be fixed in the tower. These bells are furnished by Messrs. Taylor and Son, of Loughborough. The heating and ventilating are secured by a combined hot-air and hot-water apparatus, furnished by Messrs. Haden, of Trowbridge, Wilts. Messrs. Bowden, Edwards, and Forster, of Manchester, were the contractors for the church, and Mr. James Garbett was clerk of the works.

Plymouth.—On Thursday week the church of St. John the Evangelist, erected in the district parish of Sutton-on-Plym, a portion of the parish of Charles, situated at the head of Jubilee-street, was consecrated by the Bishop of Exeter. The church is designed in the Middle-Pointed style. It consists in plan of nave, north and south aisles, divided by a stone arcade of four bays, with chancel and south chancel aisle, separated by a screen of open timber, and tower at the east angle of north aisle. There is a north entrance and porch, and also a west doorway. The materials of which the church is built are Bath stone for the dressings, and the main walls of the limestone of the neighbourhood, laid in random courses and slightly hammer-dressed. The roofs are covered with grey slates. The interior is fitted up with open deal seats stained, and the timbers of the roof are also stained and exposed to view. The length of the nave and north and south aisles is 66 feet; the chancel, 26 feet; the height of tower and broach, 120 feet. The church accommodates 550 persons, and is built from a design of Mr. Ferrey's, by Messrs. Bovey and Matcham, of Plymouth.

Birmingham.—The foundation-stone of the restored spire of St. Martin's was laid on Thursday before last.

PROVINCIAL NEWS.

Boston.—The Corn-exchange is making progress, under the contractor, Mr. Webster, of Wyberton. The laminated ribs for the roof, constructed at Wyberton, are now lying in front of the Exchange. Their span is nearly 50 feet. ——The works of the New General Cemetery are approaching completion. The walks, plantings, and shrubberies have been laid out by Mr. Foxley, of the Boston Vauxhall Pleasure-gardens, at a cost, it is said, of about 400*l.* The chapels and lodge are nearly finished.

Lynn.—The Poor-law Board advised the erection of only a portion of the New Workhouse works, namely, the main buildings and the infirmary. It being considered by the Local Board, however, that the present infirmary would answer the purposes required of such a building, it was resolved to proceed with the main works only; and Mr. Bennett's tender for that portion (5,240*l.*) being the lowest, was accepted.

Banbury.—The circular baths, of which we have before spoken, are in progress at the south-eastern extremity of the borough, adjoining the canal. The water is supplied from a perpetual spring in the hills. The circular building will be about 100 feet in circumference. The centre of this circle, 24 feet across, forms the boys' bath, which it is intended should be occasionally a tepid one, 4 feet in depth. The outer circle will form the bath for men, varying from 4 feet 6 inches to 5 feet 6 inches in depth. An embankment runs round, from the top of which instructions may be given in the art of swimming. The men's department will contain sixteen dressing-boxes—and the boys a proportionate number, all of which will be enclosed and made as comfortable as private baths. In the bath-house adjoining the entrance, over a small bridge, will be some private warm baths, each department to be superintended by proper attendants. The building, according to the local *Guardian*, is erected at the sole expense of Mr. T. Draper. Mr. A. Kimberley is the builder employed, and the baths are expected to be ready for opening in the course of the ensuing month.

Watford.—The foundation-stone of the new Corn-exchange here was laid on Monday before last by the Provincial Grand Master of Freemasons in Hertfordshire. The new Exchange is to occupy a part of the site of the old posting house, the Essex Arms. It will comprise a hall 60 feet in length, 30 in breadth, and 23 feet 6 inches high to the crown of the arched ceiling. The ceiling will be pierced by eight lights, and is to be coffered and enriched with mouldings. There will be an assembly-room at its east end, and a billiard-room over it. Opening into the principal half will be seven rooms, for the use of the corn buyers. The building will be approached from the street by a vestibule. The hotel is to be reconstructed. The street elevation will, in appearance, form part of the Corn-exchange. The architect, Mr. James Murray, and the contractor, Mr. Thomas Pratt, both of Coventry, are said to have recently acted in the same capacity at the erection of the new Corn-exchange in that city. The amount of the contract is 18,000*l.*

Newcastle-under-Lyne.—That portion of the new covered market here appropriated to the use of the butchers having been found too small, the town council some time ago determined upon its enlargement: this alteration is just completed, and thus about twenty additional stalls are added to the building.

Kelham.—The committee appointed to consider the measures to be adopted for the erection of a bridge at Kelham, in the place of the one destroyed by ice in February last, have reported to the magistrates in special sessions, that Mr. Cubitt did not recommend either of Mr. Worth's designs which had been submitted to them, and that Messrs. Fox and Henderson had not sent in any design, but that Mr. Cubitt had approved of a design which had been laid before him, by Mr. Carr, of a brick and stone bridge, which afterwards had been amended by Mr. Carr, and also approved of by Mr. Cubitt, now submitted to the court by the committee, and for the erection of which Mr. Waring had submitted a tender for the sum of 6,900*l.* The committee recommend the court to adopt the same design." The committee were accordingly requested to proceed with the erection forthwith.

Manchester.—The foundation-stone of the new mechanics' institution was laid on Thursday before last at the corner of David-street, Portland-street, by Mr. Oliver Heywood. The design was furnished by the late Mr. Gregan, architect, and, according to the local *Courier*, this design will be carried out in its integrity, under the superintendence of Mr. W. R. Corson, of Leeds.

Droylsden.—On Saturday before last the ceremony of laying the first stone of new schools at Clayton, in this parish, was performed by the agent to Mr. P. R. Hoare, owner of the estate, at whose sole cost the building is to be erected. The site of the new school is a field adjoining Clayton Hall.

Blackburn.—According to the new valuation, just completed by Mr. Railton, the following appears to be the number of assessments of the rateable value of property in each ward of this town:—

	Assessments.		Valuation.		
Park ward	1,850	...	£20,808	15	0
St. Peter's	1,523	...	16,604	5	0
St. Paul's	1,892	...	17,910	10	0
St. Mary's	1,214	...	21,971	10	0
St. John's	1,697	...	16,870	10	0
Trinity	1,763	...	17,046	10	0
	9,939	...	£113,212	0	0

Wigan and Ince.—Progress is now being made with the Wigan cemetery. A new road to it, 12 yards wide, has been cut from the highway to Warrington, and a large iron girder bridge has been erected across the North Union Railway, at the point where the new road terminates. The lodges and gates of the cemetery will be close to the westerly side of the bridge. The Episcopal chapel is 7 yards out of the ground, and the foundations of the Dissenters' chapel and Roman Catholic chapel are also laid. Workmen have commenced the drives, walks, &c. The Ince Burial Board have also selected a site for the proposed cemetery for the township of Ince. Their plot consists of 3a. 2r. 10p. and, like the Wigan ground, forms part of the Hall of Ince estate. The price is 300*l.* per acre. The Ince Board are now obtaining plans and estimates for two chapels.

Slaithwaite.—On Tuesday week the foundation-stone of the Slaithwaite gas-works was laid by the agent to the Earl of Dartmouth.

Newcastle-upon-Tyne.—Mr. Grainger is about to submit to the corporation a plan for a new cattle-market. The site proposed is ten acres in extent, near to the Water Company's reservoir at the Westgate.

Glasgow.—The new suspension-bridge, near the Humane Society's house, is in progress.

The iron pillars intended to surmount the stone piers are placed in position, and otherwise nearly completed; and two chains have been suspended across the river.——The long intended improvement at the north end of Glasgow bridge is now in course of being carried out. The parapets of the wing walls have been cut short by some 25 feet or so, and the foot pavements towards Broomielaw and Great Clyde-street will be rounded quicker off, thus affording a greater width of carriage-way for the Broomielaw and Clyde-street traffic, and easing off the over-bridge traffic from these streets.

Perth.—Sir Hugh Munro, of Foulis, bart. has bequeathed his estate of Milton, in Rossshire, to found a free school in Perth, for the education of the children of tradesmen belonging to the town. The rental of the property, being about 300*l.* per annum, is to be applied to the support of the institution; and the sum of 1,000*l.* is left for the building of the schoolhouse. The school is to be in connection with the Established Church of Scotland.

Arbroath.—On Saturday week, according to the local *Guide*, the new market buildings were opened, and a dinner was given in the hall henceforth to be used as a corn exchange.

ST. PETER'S-IN-THE-EAST, OXFORD.

THE great interest which has always attached to the Church of St. Peter-in-the-East, its venerable antiquity and curious architecture, give it rank among the most valuable remains of ecclesiastical architecture, and on this account its preservation is an object of considerable importance.

For some years past the south-east angle of the chancel has exhibited increased signs of weakness: the turret is several inches out of the perpendicular, and so also are the walls, which, besides this defect, present fractures in many places. These injuries at length assumed so threatening an aspect, by their enlargement across the stone roof, as to require immediate attention. The warden and fellows of Merton College, the patrons, undertook the work in the most generous spirit, and employed Mr. Buckler to carry out their intention.

When it is considered that the south wall yielded to the pressure of the stone groining of the roof so far back as the commencement of the fourteenth century, and required the aid of a powerful buttress to check the accident, the existence of several of the present defects may be easily accounted for, as, for example, that in the Norman window on the south side, which was crippled at the time referred to. There can be no doubt that the principal defect was in the foundation of the turret at the angle: it has gradually subsided from the want of sufficient strength, a fault of no common occurrence in Norman architecture, and in this instance resulting from the fact that the walls of the crypt were built nearly to their height without any additional bulk as a preparation for the staircase turrets, the stonework for which was abruptly started at the ancient ground-line. The turret is 5½ feet square, and the projection of the face, beyond the foundation, 18 inches: rough stones were loosely piled up between the footing and the overhanging turret, as if intended to answer the purpose of a shore, but the ground was no sooner removed from it, than the rude casing fell away from time to time, and revealed the evidence of the change which had been made in the design at this place. The turret now stands upon a basement of solid masonry, and the defective portions of the adjoining walls have been repaired.

The angle rib of the roof was sadly depressed, but it has been restored as nearly as possible to its original curve, and the joints made perfectly secure. The ribs receive no support from the stone vault: they have only to sustain their own weight, and may be regarded as solely ornamental to the interior.

The design is a chain pattern, which would have been greatly enriched had the carver resumed his labours after the stonework was fixed.

PETERBOROUGH CATHEDRAL. — The Dean and Chapter have determined on a steady and gradual course of repairs and improvements in and about the Cathedral.

TO FIND THE STRENGTH OF A BEAM SUPPORTED BY PROPS.

WHERE a beam of any material is supported at its two ends only, the strength thereof is found by the formula

$$S = c.\frac{b.d^2}{l}$$

Where S = weight which the beam will bear, b = its breadth, d = its depth, l its length, and c is a constant quantity depending on the material of the beam.

If then we place a prop under the centre of the beam we divide it into two other beams, each of which is half the length of the former beam. Therefore, if we call S the strength of the unsupported beam, and s that of the half-beam, it follows that

$$s = c.\frac{b.d^2}{\frac{1}{2}l} = 2.c.\frac{b.d^2}{l} = 2.S$$

And since the whole supported beam consists of the two halfs whose separate strengths are each double of that of the unsupported beam, therefore the strength of the propped beam is four times that of the unpropped beam, or is equal to 4.S.

If the beam has two props, dividing the length into three equal parts, then since the length of each part is $\frac{1}{3}l$, the strength of each part

$$= c.\frac{b.d^2}{\frac{1}{3}l} = 3.c.\frac{b.d^2}{l} = 3.S.$$

And since the strength of the whole propped beam must be equal to the sum of the strengths of its several parts, therefore its strength is equal to three times that of one of the parts, or is equal to 9.S. In other words, the strength of a beam divided by props into three equal parts is nine times the strength of the same beam without props.

In the same way we can readily obtain a general rule for the strength of a beam having any number of supports. Let n be the number of equal parts into which a beam is divided by $n-1$ props, let s be the strength of each part,

$$\text{then } s = c.\frac{b.d^2}{\frac{1}{n}l} = n.c.\frac{b.d^2}{l} = n.S$$

and since there are n of these parts, therefore the total strength of beam $= n^2.S$.

Or, the total strength of a beam divided by props, placed at equal distances, into any *number of parts*, is found by multiplying the strength of the beam without props, by the *square* of the *number of parts*.

When a beam has a prop which is not in the centre but at a distance of m feet from one end and of $l-m$ feet from the other end, if we call s_1 the strength of the former part, and s_2 that of the latter,

$$s_1 = c.\frac{b.d^2}{m} = \frac{l}{m}.c.\frac{b.d^2}{l} = \frac{l}{m}.S$$

$$s_2 = c.\frac{b.d^2}{l-m} = \frac{l}{l-m}.c.\frac{b.d^2}{l} = \frac{l}{l-m}.S$$

And the total strength of the propped beam $= s_1 + s_2$

$$= l\left(\frac{1}{m} + \frac{1}{l-m}\right).S = \frac{l^2}{m(l-m)}.S$$

In the same way may be found the strength of a beam supported by any number of props placed at irregular distances apart.

E. W. TARN, M.A.

THE TOMB OF AYLMER DE VALENCE, WESTMINSTER ABBEY.

MY notice of "M. H.'s" interesting letter of the 28th of October last (*Builder*, Vol. XII. p. 557), is indeed late, but I had not the opportunity of reading it until the present week. Your correspondent speaks of the "evident inaccuracy" of an anecdote quoted by me in the address to the Worcester Architectural Society, viz.—that Aylmer de Valence's tomb in Westminster Abbey was removed to make room for General Wolfe's monument. We must remember that, in quoting Horace Walpole, I quoted a living witness—one personally interested in the subject. His was not a mere hearsay report; and what does he tell us? That the Dean of Westminster had at first objected to the arrangement of removing this tomb for Wolfe's monument, but that he was wrought upon to consent to the removal. Walpole was doubtful as to the fact: he wrote to the dean, expressing his regret that this fine monument should be removed, and asking for it as an ornament for Strawberry-hill. What a translation, from Westminster Abbey to Strawberry-hill! Then he tells us that after a fortnight's delay, the dean avowed the story under his own hand, viz.—mistaking the earl's tomb for that of a Knight Templar; that upon discovering whose it was, he had been very unwilling to consent to the removal, and at last had obliged Wilton to engage to set it up within 10 feet of where it stands at present.

Now I would ask whether Walpole's letter was not sufficient to lead me astray? and I would also ask whether the removal of the ancient tomb might not have been commenced, and been happily stopped, from difficulties intervening, or from a better feeling arising amongst the chapter; and was it in the efforts made during its partial removal that this noble monument was injured? It is admitted that either from unpardonable neglect or wilful injury "considerable dilapidations" have taken place.

It would be worth ascertaining whether the space which Wolfe's monument occupies was sufficient to have admitted the older one. If too small, all thoughts of removal must have been at once abandoned, unless De Valence's monument was to have been subjected to monstrous curtailment.

Notwithstanding Walpole's explicit statement, I admit that the anecdote in my paper should not have rested on his unsupported testimony, and is too strongly expressed. Instead of saying that the reckless deed was actually perpetrated, I should have merely shown that it was contemplated or perhaps attempted.

J. H. MARKLAND.

ART-WORKMEN.

CONVERSAZIONE, ARCHITECTURAL MUSEUM.

THE *conversazione* at the Architectural Museum on Monday evening last was exceedingly well attended, and passed off with much spirit and satisfaction. There were probably 500 or 600 persons present. Earl de Grey presided. The treasurer, Mr. Scott, read a report, from which we take the following illustrative passages:—

"The one great object of this institution is the improvement of that large and important class employed on architectural works who may be included under the denomination of art-workmen, and, through them, the restoration to their proper level and estimation of the branches of art which they represent.

It is a peculiarity in architecture, as distinguished from the other fine arts, that it requires for its perfection workmen and artists in almost every branch of ornamental workmanship, and is in itself a concentration of nearly the whole range of decorative art. In the best ages of architecture, whether under the civilization of the ancient world, or in the days which heralded our own, this fact was thoroughly appreciated, and it was considered the province of architecture to promote the perfection of all the subsidiary arts. In our day, however, this has been unhappily lost sight of. Painting and sculpture, in their higher branches, have estranged themselves from architecture, while she has neglected to foster those humbler branches of the sister arts which she has retained in her service, and has allowed them to sink into mere handicrafts, scarcely removed a step above the mechanical operations of masonry or carpentry. The humble artificers who are employed in our decorative work, have been suffered to go on without any means being provided for their artistic education and improvement, and really without the means of knowing whether their productions were good or bad. And, strange to say, such has been the apathy of the public, and their want of appreciation of such subjects, that they have never appeared aware of these facts: they seem never to have discovered the demerits of the works with which they are surrounded; and, even now, it is not uncommon to find educated men filled with admiration of the genius of some precocious stonemason, whom they have seen boldly cutting into a piece of stone, and with unhesitating confidence producing sculpture somewhat inferior to that of the gingerbread kings at Bartholomew Fair. We do not pretend to say that *our* movement has been the first to remedy this state of things. Individual architects and others have done much within their own spheres to ameliorate it. Ours, however, claims the honour of being the first PUBLIC and SYSTEMATIC step taken for the benefit and improvement of the art-workman.

If you will look into our published catalogue, you will find a detailed statement of what we have already done, and wish to do. Our first principle is to bring within the reach of the workman as large a collection as possible of objects of study, as it is for the most part quite out of his power to visit them if not brought within his reach. Our next object is to excite his interest and to induce him to make use of the means we are placing at his disposal."

The Rev. Mr. Maurice, Archdeacon Thorpe, Mr. A. Beresford Hope, Mr. S. C. Hall, Mr. Godwin, the Rev. Mr. Boutell, the Sub-Dean of Salisbury, Sir Walter James, and others, addressed the meeting at some length; and thanks were voted to the treasurer; the hon. secretary, Mr. Clutton; the curator, Mr. C. B. Allen, &c.

Amongst the contributions for the evening we may mention the model of the Crystal Palace, as proposed by Sir C. Barry, and lent by him; a large collection of modern fine art work, in brass and iron, by the Messrs. Hart, of the Strand; a collection of cups, book-covers, in silver, &c. by Messrs. Skidmore, and some ironwork for the new Oxford Museum; a panel incised stone, by the Messrs. White; some

specimens of glass, by the Messrs. Powell; drawings of glass, from Altenberg, taken by Mr. A. O'Conner; designs for glass windows, by Mr. Oliphant; a glass window, by Mr. Lavers; the cartoons for an altar-piece, by Mr. A. Rowan, typical of the Incarnation; some specimens of Oriental workmanship, by Mr. Rhode Hawkins; a number of specimens of panels, &c. of glass mosaic, by Mr. Stephens; a model of the top platform of the Parthenon, showing the curvature of the east and west points, and two sides, also the rise in the centre, exhibited and explained by Mr. Jopling; a collection of photographs from Venice, by Mr. Scott; some specimens of Spanish terra cotta, by Mr. Rogers; some casts of natural leaves, by Mr. French; and a vase, Eastern workmanship, lent by Mr. Owen Jones.

COMPETITIONS.

Lincoln Cemetery.—Although the committee, as we said last week, had selected a certain number of designs, and had even recommended one for the first prize ("Justitia"), the Board have determined on referring the whole of the designs to an architect for him to report upon, and have invited Mr. Scott to undertake the matter. This is a proper step. The authors of the design marked "Justitia" had identified themselves by referring to works which were being performed under their direction elsewhere, contrary to the advertisement, which says,—"If any name is written on the plans, or any written or verbal communication made, directly or indirectly, to indicate any competitor's name to any member of the Board, or the officials, previous to the plans being selected, such plans will be absolutely rejected." The following are the mottoes of the other selected designs:—"Ad Rem cum Deo," "Hope," "Experience," "Spes," "Industria," "Confide in Deo," "Nulla fallacia est," and "Studii Summa."

"*Barrack Committee.*"—Allow me to protest against the injustice contemplated by the "Barrack Committee," in keeping "*all plans sent in*," as stated in their otherwise liberal advertisement.—M.

Dudley Workhouse.—The plot thickens. Every step that is taken sinks the Guardians deeper in the mud. Notwithstanding the denial of foul play so emphatically given to the *Builder* correspondent, will they say that *no attempt* was made to pass a certain set of plans by name? or rather to vote for a certain individual before his plans ever were known? Scorning the advice for professional assistance, the Guardians took upon themselves the decision—made it in favour of a "picture." The result is, the plans are returned from London, with a voluminous letter of forty-eight pages of foolscap, pointing out alterations that were required. The letter likewise suggested the *docking* the elevations of the ornamental work, "more especially of the entrance building, and of the central tower of the main building," which they thought might be dispensed with. The Poor-Law Board were apprehensive that *after their* deductions were made, *the cost of the building would exceed the architect's estimate.* The above is no hearsay, but gathered from the local press. Do you do right, then, sir, to let the matter rest? Is it not so flagrant a case of *mal competition* that it deserves the heartiest castigation that can be inflicted?

ARCHITECTUS.

ARCHITECTS' CHARGES.

You will do well, I think, to open your pages to the discussion of architects' charges. I have found great difference of opinion among *professional* men as to how the usual 5 per cent. is made up. Some books state that it is made up of four equal parts, thus:—

Design and working drawings	1¼
Specification	1¼
Approximate estimate	1¼
Superintendence, including supply of detail drawings	1¼
	5 per cent.

Again, the evidence of some three or four architects lately taken in the Court of Queen's Bench was to the following effect:—

Design, including working drawings, specification, approximate estimate, superintendence, and further details	5 per cent.
If not actually built:—	
For design, working drawings, specification, and approximate estimate	2½ per cent.

And lastly, in a recent number of your journal, I find Professor Donaldson stating that 2 per cent. is the proper charge for superintendence, and the remaining 3 per cent. for designs, working drawings, and specifications. No mention is made of estimate, which I suppose he includes in the last-mentioned item.

It is evident these three cases, while agreeing in 5 per cent. as the maximum, are at variance as to the proper charge in the event of the works not proceeding. I should be glad to know from good authority what is really the charge adopted by the profession *generally*, and your journal seems a likely medium to elicit and supply this information.—B.

ADDITIONAL WORKS SELECTED BY PRIZE-HOLDERS IN THE ART-UNION OF LONDON.

From the Royal Academy.—Skaters, C. Lees, 105*l.*; Lallah Rookh, F. Wyburd, 80*l.*; Cuddie Headrigg, D. W. Deane, 60*l.*; Gathering Watercresses, W. F. Witherington, R.A. 60*l.*; Landscape, G. Cole, 60*l.*; At Sonning, G. C. Stanfield, 50*l.*; Erridge Park, C. R. Stanley, 35*l.*; Italian Mother praying for her Sick Child, H. Pickersgill, 35*l.*; Lane, Hastings, J. Meadows, 35*l.*

From the Society of British Artists.—Quiet Evening on the Thames, H. J. Boddington, 60*l.*; at Lynton, A. Clint, 35*l.*; Etretat, Normandy, J. Wilson, 35*l.*; Girl and Chickens, J. T. Peele, 35*l.*; Lutcombe Chine, J. Danby, 35*l.*; Cymon and Iphigenia, A. J. Woolmer, 35*l.*

From the National Institution.—Autumnal Morning, A. W. Williams, 100*l.*; Lane Scene, A. W. Williams, 75*l.*; Kilchurn Castle, S. R. Percy, 75*l.*; Scenery in Knowle Park, E. J. Cobbett, 60*l.*; Feeding Rabbits, E. J. Cobbett, 50*l.*; Showery Weather, E. C. Williams, 35*l.*; Reading a Chapter, C. Dukes, 35*l.*; Salmon Trap, F. W. Hulme, 35*l.*

From the Water-Colour Society.—Hadley Castle, G. Fripp, 42*l.*

From the New Water-Colour Society.—Belted Will's Tower, W. Bennett, 75*l.*; Berry Pomeroy Castle, E. G. Warren, 73*l.* 10*s.*; Ye hae tellt me that afore, Jemmy, H. Warren, 105*l.*; Fishermen off the Nore, T. S. Robins, 25*l.*

THE BATH-ROAD BRIDGE AT BRISTOL.

IN place of the cast-iron bridge at Bristol, which was recently destroyed by a coal-barge, the Dock Committee determined to erect a bridge of wrought-iron; and on the 13th of April Mr. Finch, of the Chepstow-bridge works, made arrangements with their engineer, Mr. T. E. Blackwell, to construct it. This bridge is to consist of nine girders, each girder being 107 feet long, 5 feet deep in the middle, and 4 feet at each end; and weighs, each, about 25 tons. Upon the top of these girders is placed strong planking, and over this is formed the road. As there was novelty in the mode of conveying and erecting the two girders now in place, we may briefly state how this was accomplished. The girders, 107 feet long, were put together and rivetted complete in the maker's yard. When ready for shipment, they were taken each separately out of the yard, and placed alongside the wharf. At high-water a barge was floated to the wharf, and as the tide receded, the barge was left aground on the mud bank. Balks of timber were then laid, one end resting upon the barge and the other on the wharf, immediately under the bottom flange of the girder. Upon these balks rails were laid: these were greased, and the girder was slided gently down until it rested on the deck of the barge, and being longer than the barge by about 36 feet, there was 18 feet at each end of the girder overhanging. The balks were then removed, and the girder lashed to its place, edgeways on the barge, the underside of the overhanging ends of the girder being about 4 feet from the surface of the water. When the tide again rose, the barge with the girder upon it floated, and was towed away from the river Wye, at Chepstow, to Bristol.

The masonry has been prepared, and stands about 17 feet above the high water-mark; a substantial square block on each side of the river: upon these two blocks of masonry the girders have finally to be placed. About 40 feet below the bridge, Mr. Finch erected two substantial stages, formed of balks of timber, firmly attached to the ground, and stayed in every direction. These stages or platforms stood at high water about 3 feet 6 inches out of the water: the steamer then brought up the barge with the girder upon it, with the flood-tide, to the bridge, so as to arrive there about half an hour before the tide turned, and before the current was very strong: when arriving at the stages above described, the barge was placed across the stream, so as to allow the two overhanging ends of the girders to come over the stages: they were retained in this position, and a valve in the barge was opened, and the vessel partially filled with water, until she sank sufficiently to leave the overhanging ends of the girders resting upon the stages, and until she was so far immersed as to be moved down the stream by the receding tide. The girder is now across the stream, resting upon these two stages: the tide now recedes, until there is nothing left but the fresh water from the hills flowing down the bed of the river, the girder then being left high above on the stages. We will now see how the operation of lifting the girder and conveying it to its place is performed. Two mud barges, used by the Dock Company, at Bristol, for conveying the refuse out of the docks are obtained: these are large flat-bottomed boats that will carry 67 or 70 tons each. Upon each of these barges is erected a stage or tower, so high, that when the barges are resting on the bed of the river at low water, the top of the tower shall reach, or nearly so, to the under side of the girder, as it rests upon the wood stages across the river: as soon as the tide has receded sufficiently low, these two barges, with the towers upon them, are placed under the girder, and are moored so that they shall not be able either to move up or down the stream, until required to do so. Being all prepared, as described, they remain stationary, until the tide turns; when the tide begins to float the barges, and as the tide rises, so the barges rise, until the towers press against the girder, and lift it off the stage; and as the tide continues to rise, so the girder is carried upwards, until it is finally lifted by the rise of the tide as high as the top of the masonry upon which it has to rest. The chains that hold the barges at one end are slackened out, and those at the other are tightened, and the barges are thus moved forward with the tide, until the ends of the girder are brought over the masonry, the exact place where the girder has to be fixed. It is held there until the tide turns; and, as this recedes, the barges sink, and deliver their burden to its final resting place on the masonry, and are carried down the stream with the receding tide, and anchored in a convenient place, ready to perform the same operation again.

POTICHOMANIE.

THE new practitioners of this old art take a much higher flight than our good old grandmothers of the sand bottles, and are content with no less a victory than an exact imitation of everything in the shape of porcelain that falls into their unmerciful clutches. To this all their energies are directed: on this all their talent is displayed. No improvement in the characteristic of the art is sought after, or the perfecting its capabilities as a distinct branch of the ornamentation and colouring of beautiful forms: all this is cast aside for the tempting *ultimatum*, which is to make blown-glass appear baked pottery, and coloured prints pass as porcelain painting. But no human being could ever mistake the one for the other on close inspection, and painted porcelain invites minute examination; we must, therefore, pronounce the present practice of Potichomanie as an unmistakable abortion. It is a misfortune that popular favour should have taken this bent, when so many beautiful effects are within its reach, and might so easily be obtained, if those who practise the art studied the harmony of colour, the disposition of form, the peculiarities and difficulties of the process of application, overcame the latter, and turned the former to advantage.

I would suggest that the forms of the beautiful Etruscan vases in the British Museum, should be reproduced, as the material which Potichomanie is best fitted to render beautiful. These, when produced in clear thick glass, might be decorated with Rowney's water-colour prints, or the chromo-lithography of Vincent Brooks, especial care being taken in harmonising the background with its subject, so that all violent contrasts may be avoided. This would give us the pure beauty of *form* in the vase, and when we examined more minutely the *colour* of the prints, we should there find no disappointment. Knowing perfectly well what they were, we should feel pleasure in examining their various claims to our admiration, and be willing to allow them a niche in the vast temple of Beauty and Art. The art would then depend on its own foundation, and not rely on any tricky deception for its toleration amongst us. In this way many beautiful objects might be obtained, at a cost which would place them within the reach of all. And, then, as a distinct and really legitimate branch of art, let us call it by a name which neither breaks our teeth nor excites commiseration; for this, I would humbly suggest that the treatment I have proposed should be distinguished from its meretricious sister by the name of "RALLIA WARE."

But allow me, through your columns, to raise my voice against the present practice of Potichomanie, merely as an imitation of another and much higher art;—to protest against the scattering, broadcast, vile, and unsightly Chinese caricatures of dragons and houses, outrages of nature and perspective;—against the transferring body and bones, the barbarous and puerile efforts of any nation which happens to be ignorant in art to the hearths of a highly refined and educated people; against the reproducing all the *defects* of porcelain of every "school;"—and against the *ultimatum* of an English art being the low, trivial victory of a take-in!

A MARLBOROUGH-HOUSE STUDENT.

Notices of Books.

The Louvre; or, Biography of a Museum. By BAYLE ST. JOHN. London: Chapman and Hall. 1855.

THE history of the Louvre runs over many centuries,—if we go no further back than the year 1204, when Philippe-Auguste built the great tower there, that long frowned over Paris. Mr. Bayle St. John has sketched this history with a pointed pen, and has produced a pleasant book, which will interest as well those who stay at home at ease, as those who have visited, or are about to visit, the finest home of which the Arts can boast. François I. destroyed the great tower, and to him may be ascribed the commencement of the present building, during the Renaissance, when the revivers of the antique style, or what they considered such, were combatting and overlaying the Gothic. Mr. St. John speaks of an allusion to the discussions which accompanied this change by a rhetorical writer of the end of the sixteenth century, Estienne Pasquier. Pasquier says that—

"There still existed some people of the old school who admired all the edifices built 'since the coming of the kings,' as Notre Dame, the Holy Chapel, and the Palais, which common observers, adopting the fashionable term of praise, esteemed to be all constructed in the antique style. 'Yet, in the judgment of brave architects,' he continues, 'there is nothing antique about them; they are built after the modern fashion, and have none of those rare traits which the ancient Greeks and Romans used in their architecture; but it may truly be said that a Louvre was constructed by the late M. de Claigny, in the antique style, although it is new; and he has expressed in it everything that was fine and worthy of old.' On the other hand, as the same writer tells us elsewhere, according to a great architect, Maistre Jacques Androuet, dit Du Cerceau, the Sainte Chapelle was the finest modern building known; and he spoke slightingly of the *parades* which M. de Claigny, or Clagny—that is to say, Pierre Lescot, to whom François I. gave the Abbaye of that name—had borrowed from the antique. We have here the record of a conflict of opinion, which does not seem to have left any other documentary trace; but it is difficult to reconcile the admiration of Du Cerceau for the master-piece of the time of St. Louis, with the accusation directed against him by M. Vitet, that he introduced the colossal order from Italy."

Pierre Lescot, aided by Delorme, Lemercier, Perrault, Bernini, Mansart, and Duban, followed each other at wide intervals, as architects. Claude Perrault, who designed the frontispiece and colonnade of the Louvre, was born in 1613, and died in 1688. He had studied medicine. Boileau refers to him, when he speaks of one who "from an ignorant physician became a good architect." The Colonnade of the Louvre has had more praise than it seems to us to deserve. Perrault translated Vitruvius, and published some other works on architecture.

After the revolution of 1848, the new government appointed Mons. Jeanron director, and this gentleman Mr. St. John regards as having rendered greater services to the museum than any other individual since its foundation. Under circumstances of extreme difficulty, when the court of the Louvre and the yards were occupied by five or six thousand insurgents, he contrived by his addresses to protect the building from spoliation. Although they consented to refrain from sacking the museum, they determined to destroy the bronze statue of the Duke of Orleans in the court, and were only persuaded from it by the pledge that he would cause the obnoxious statue to be removed during the night.

"The rain was falling in torrents, and the night had become dismally dark. That colossal monument was difficult to move. No tools, no workmen were ready. M. Jeanron made an impassioned appeal to some of the people of the museum, and to M. Debay, the sculptor attached to the Louvre. They worked all night, and by daylight the statue had, indeed, been carried to the Pavilion Beauvais, and carefully surrounded by a hoarding. Only just in time, for immediately afterwards the folk from the Palais Royal, flushed with wine, came tumultuously to ascertain whether the engagement entered into with them had been kept. The bas-reliefs on the pedestal had not yet been unsealed, and numerous hammers were at once raised to shatter them. But a man in the crowd saved them by saying that M. Jeanron had proved himself to be a diligent workman, that he was himself of the trade, and could not understand how so much work had been got through in so little time. 'The least we can do, therefore,' he added, 'is to make him a present of the two bas-reliefs for his trouble."

From Mons. Jeanron Mr. St. John repeats many opinions, especially on the subject of restoring works of art, wherein our author speaks strongly, giving a frightful account of such doings in Paris:—

"'We have sometimes,' said a sculptor working at Versailles, 'very sad fellows in our ateliers, the poor and impudent devils who serve as our models. They have carried many a word from the language of our class to the barriers, and other out-of-the-way places, where a hideous language is spoken for hideous confidences. To kill a man, in slang, is 'to clean him.' This word came from us. To clean a picture is to kill it."

Mr. Jeanron objects, and with justice, to the alterations made by enlargement to integral and pure architectural monuments,—

"Whose complexion had been pre-established in the mind of the architect, their size fixed, and their compartments exactly divided in their variety—which have been completely destroyed, as manifestations of that first instinct of the beautiful and the proper, which the creating artist had known how to introduce. Architecture also has its framework and its proportions. Thus the admirable Hôtel de Ville of Paris, increased beyond measure, enlarged and continued, in pretended respect of the style of the primitive monument—with the same fineness—the same lightness of form and ornamentation—appears now as a colossal mass, on which are written, as it were, an imperceptible and flimsy tissue of ornaments, which were only proportioned to the old edifice."

There are parts in which the book is a little spun out, but as a whole we can safely recommend it to those who would get a knowledge of the Louvre and its contents.

Miscellanea.

IRON AND STEEL: IMPORTS AND EXPORTS.—Returns issued from the Parliamentary Paper Office show that, comparing the imports with those of 1853, there was a large increase last year in iron ore, and also in wrought iron and steel goods; but the supply of the latter came chiefly from Denmark, France, and Holland, in 1853, while last year the United States, Belgium, and France, were the chief sources of it. As regards bar iron, there is a decrease of almost precisely the quantity received from Russia in the preceding year. The exports of foreign iron show a decrease. The quantities of British iron exported last year were as follow:—Pig iron, 293,432 tons; bar iron, 604,662 tons; bolt and rod iron, 12,056 tons; cast iron, 69,338 tons; iron wire, 7,987 tons; wrought iron, 176,203 tons (including 26,084 tons of anchors and grapnels, 30,709 tons of hoops, and 8,141 tons of nails); old iron for remanufacture, 12,242 tons; and unwrought steel, 20,793 tons. Comparing these figures with the return for the preceding year, we find that the decrease in the quantity of pig iron exported is exactly accounted for by the loss of Russia as a customer, which, in 1853, imported from this country 639 tons. Of bar iron Russia imported from Britain, in 1853, 5,080 tons, but the decrease in the exports of last year is about 40,000 tons, the remainder of the difference being accounted for by the diminished demand from the United States. The export of cast iron has increased, notwithstanding the closing of the outlet afforded to the Russian markets, which in 1853 took 1,499 tons.

A CAUTION.—While a child, under two years of age, the daughter of Mr. Holt, organ-builder, Halifax, was watching the progress of some excavating work, and standing close behind on the left side of a workman who was casting out earth, he accidentally struck the child on the face with his spade, actually cutting off the nose.

AN ANTIQUARIAN QUERY: GLASTONBURY.—Can any of your readers oblige me with any information respecting the "Pyramids" mentioned by William of Malmesbury ("History of Kings of England," section 21), as being close to the church of Glastonbury? One of them is described as 28 feet high, and having five stories; another, as 26 feet high, and of four stories. It appears that they were Christian monuments of the Saxon period. I do not suppose that any traces of them are still in existence, since one of them, in Malmesbury's time, was threatened with "ruin from its extreme age;" but I should be glad to be informed whether anything is known respecting them, beyond what Malmesbury has said in the passage above quoted, and whether any monuments of a similar character ever existed in this country.—BETA.

DECORATION OF GLOUCESTER.—Mr. Clarke, architect, of Gloucester, has been engaged to superintend the decorating of the city for the Royal Agricultural Show. His remuneration, according to the *Carlisle Journal*, is to be twenty guineas.

METROPOLITAN ASSOCIATION FOR IMPROVING THE DWELLINGS OF THE INDUSTRIOUS CLASSES.—According to the eleventh report of the directors of the Metropolitan Association for Improving the Dwellings of the Industrious Classes, they have purchased during the last year two houses in Albion-buildings, Bartholomew-close, Aldersgate-street, tenanted by twenty-four families, each occupying two rooms. Dwellings for 108 families on the freehold site in Nelson-street, Bermondsey (near the London-bridge Railway termini), are also on the point of completion: they consist of 102 sets of three rooms, and six sets of four rooms. When the whole are completed they will have provided a total amount of improved accommodation for 395 families and 362 single men. In consequence of the applications from the inhabitants of different metropolitan districts for the apportionment of capital, and to grant the same immunities to persons resident in the metropolitan districts as could be enjoyed by those resident in the provincial towns and districts, without incurring the further expense of obtaining separate charters, the directors have obtained a further supplemental charter, enabling them to effect this object, that the whole of England and Wales may now be worked by such district committees as the respective shareholders may appoint, yet preserving that unity and principle of action so essential to accomplish a beneficial result.

THE SAPPERS' CHURCH IN THE CRIMEA.—One among the many interesting objects in the British Camp before Sebastopol is the Sappers' Church on the right attack. It is built wholly of siege apparatus; but these are neither injured nor unfit for service, being only "in store," while so arranged. The articles employed in the construction have been scaling ladders, gabions, fascines, timber ready cut and shaped for gun-platforms, a few planks, and some pieces of rope. Two scaling-ladders locked into each other at the top, form the columns which separate the aisles from the body of the church, and bear the roof. The framework of the outer wall is made by long upright timbers, which lean against the summits of each set of ladders respectively, and are secured by cords. Across these a few joist beams are lashed, and the outer wall of gabions, though thicker at the base than above, in a great degree rests against these horizontal supports. To form the wall, the gabions are placed end to end, one above the other, until they reach the height of the roof. The roof is made by the platform timbers laid between the tops of the ladders on each side, and at right angles to these the fascines are laid in regular rows, until a complete covering is formed. The roof is light, admits, of course, of free ventilation, and gives a perfect protection against the direct rays of the sun. At the end opposite the entrance into this truly military church a semicircular sweep is given to the gabion wall, and in the recess thus formed several sacks stuffed with straw, and covered with the Union Jack, are arranged, to form a reading desk and kneeling cushion for the preacher.

BURSTING OF THE LOCK OF THE VICTORIA DOCKS.—The intended opening of these spacious docks, at Plaistow marshes, in August, will be delayed some months, according to the *Shipping Gazette*, in consequence of a serious accident which happened on Sunday before last, by the bursting in of the principal lock, near Bow-creek. The whole of the north side of the lock quay, with its enormous iron piles and plates, forming the wall, broke outwards with a loud report, destroying nearly every part of it; and the opposite lock wall was discovered next day to have sunk considerably, with every indication of its being thrown outwards in a similar manner to the other. The lock is, we believe, between 300 and 400 feet long, and nearly 70 feet in width. Luckily for the contractors, Messrs. Peto, the water is not yet admitted into the dock, which will enable them to remove and rebuild the lock quay wall without loss of time. Land-springs are supposed to have undermined the foundation of the wall. The contractors are removing the earthworks on each side the lock to ascertain the precise cause of the accident. The loss must be very great.

BATH STONE.—With reference to a remark quoted by us on Bath stone used at Liverpool, a Quarry-owner urges that "Bath stone would hold a lasting reputation, in any clime, provided it were properly selected, and not (as I am sorry is the case) taken from quarries where anything in the shape of blocks is found, and sent away regardless of the different beds or qualities of the stone: the consequence is, the weather acts upon it, and brings the *Bath stone* into disrepute." The matter would seem to be worth investigation. His brother quarry-owners should look into this.

NEW MARKET-HALL, HOLYHEAD, ANGLESEY.—Like most places in northern Wales, the want of accommodation for an increased and apparently increasing population has been seriously felt in Holyhead, and as one step towards making up the deficiency, the Hon. W. P. Stanley, M.P. has manifested his good wishes by erecting a spacious market-hall, for the use of the town,—the first public building erected in Holyhead. It is 134 feet in length, and 85 feet in breadth. The style is Elizabethan, the rubble work being of blue stone from Mr. Stanley's quarries, of variegated colours, the windows, cornices, &c. of Storeton stone. The centre room on the upper floor, 41 feet by 33 feet, is intended for public meetings and a general assembly-room. On the left is a reading-room and library, taken by the Holyhead Mechanics' Institute: its length is 41 feet by 24 feet, divided by folding-doors, so that when necessary, it may be thrown open for lectures, &c. On the right is another room, 41 feet by 24 feet, intended for a corn-exchange. The roof is made of open timber framework, stained in imitation of oak. The area of the market-hall is floored with Holywell flags. The roof, consisting of open timber framework, is supported by two rows of Storeton stone octagonal columns, with moulded capitals. At the top of the market is a well with a pump, for clean water; and the rain-water from the roofs is conducted into a large iron tank to be used for common purposes, such as washing vegetables, &c. The number of stalls fitted up is 56, varying in size from 11½ feet square to 9 feet by 6 feet, each of which is provided with a convenient fire-place. Mr. John Edwards was the architect; Mr. John Thomas, the builder.

APPROPRIATION OF WASTED POWER.—Will you allow me to express my conviction that much power which might readily be made available, is annually wasted upon the London Bridges? The work which, I submit, is available and wasted consists in the *vis viva* of waggons, carts, &c. descending the bridges. It is obvious that much of this could be most *advantageously* expended *in overcoming a slight obstacle*. In order to render this force valuable, I propose that the descending routes of the principal bridges be furnished with pairs of large wheels, fitted in the earth-work or masonry, each vertical, and in such position, and of such diameter, as to present an arc, not rising more than 6 inches above the surrounding surface, and presenting a chord (described by that surface) of at least 3 feet. One of each pair of wheels would be placed by the curb-stone, to catch the "near" wheels of the passing waggon, and the other a short distance from it, to meet the "off" wheel, leaving a sufficient space for the passage of the horses, and still broad enough to allow for divergence from the exact line, or difference of distance between the wheels. A waggon or cart passing over this apparatus would depress it, and would thus give motion to a hydrostatic machine, filling a tank, for the purpose of obtaining water-power,—or it might be connected with any mechanism requiring only irregular motion. This apparatus would not impede the transit of vehicles: if the weight be not sufficient to produce the piston-like motion, the very light carriages would pass over easily. Thus, by gently checking the impetus of descending traffic, a valuable piston motion might be obtained.—O. H. HODGE.

LAYING CHIEF STONE OF MODEL DWELLING-HOUSES IN WORCESTER.—Monday before last was selected by the City of Worcester Association for Building Dwellings for the Labouring Classes for the inauguration of their first adventure as an association for social improvement. The foundations of the model dwelling-houses in Cooken-street, one of the dirtiest and most disreputable localities in the city, having been laid, invitations were sent to the Mayor, Town Council, Magistrates, Chamber of Commerce, clergy, officers of militia, and most of the public bodies and public men of the city, to attend the laying of the chief stone of the building. A luncheon was provided by the association for their numerous guests in the assembly-room of the Guildhall. Large crowds of persons occupied the street, and the Militia band was stationed in the area in front of the Guildhall. The company numbered about 160. The Mayor presided on the occasion.

MR. RAWLINSON WOUNDED AT SEBASTOPOL.—We regret to learn that the chief engineer to the Crimean Sanitary Commission, Mr. Rawlinson, was accidentally wounded by a shot from the enemy while passing through a ravine near the trenches. The wound, however, is not dangerous, and the patient is going on favourably by last accounts.

THE ASYLUM FOR IDIOTS.—The National Model Asylum for Idiots, which has been in the course of erection for nearly two years, at Earlwood, near Reigate, will be opened by Prince Albert, on Tuesday, 3rd July. The building is intended to accommodate 400 pupils. There are at present about 250 cases in the institution, and the applications for admission continue to be numerous.

SALT IN WALLS.—DISINFECTANTS. — Regarding the inquiry as to the nitrification in walls, what is the original cause of the salt-formation, or what is it supposed to be? Has sea-sand been used for the mortar, &c. for wall? What is the nature of the soil upon which the wall is based? Also, is it in contact with any refuse animal or vegetable matter? If your correspondent will answer these questions, and send me, per letter, a small quantity of the salt formed, I will with great pleasure inform him of what is best to be done under the circumstances. Meantime I may as well give the process I have found quite effectual in the few instances of the kind that have come under my notice. Take 4 lbs. commercial carbonate of soda (natron), 2½ lbs. commercial carbonate of potash (pearl-ash), and 2½ lbs. of finely sifted silver sand: mix intimately, and put into a crucible (iron is best if not Hessian), capable of containing three times the quantity, and fuse for two or three hours: pour out upon a stone or iron slab, and allow it to cool; then boil in about one gallon of water, until a saturated solution is obtained. Let the salt be scraped off the wall as much as possible, and washed well with warm water; then brush the hot solution prepared as above on all parts of its surface; give the wall another coat in three days' time, and at the end of a week or two the wall will be covered with an impervious glassy coating, which will, I think, attain the desired object. If applied to damp walls, they cease to be so. It will also prevent the white rubbing off.——In reference to "the use of disinfectants in the Crimea," I quite approve of the employment of quicklime, as being better than nothing. For absorbing moisture, sulphuretted hydrogen, and removing effluvia offensive to the olfactory organs, quicklime is undoubtedly very useful; but for destroying malaria,—disinfecting, in fact, in the proper sense of the word,—chloride of lime is the only real disinfectant. Why has charcoal been so completely overlooked? It possesses the property of absorbing and condensing in its pores gases of every kind: mixed with the chloride, it greatly economises and increases its power by absorbing the nascent chlorine and giving it up again to organic matter. Is not charcoal just the thing for the Crimea?—AN ANALYTICAL CHEMIST.

BRIDGE SURVEYOR OF WEST RIDING OF YORKSHIRE.—The demise of Mr. Barnard Hartley, for many years bridge surveyor of the West Riding, has made this office vacant. Mr. Barnard Hartley, the son of the late surveyor, and who has for many years discharged the duties of the office for his father, is a candidate; so also is Mr. W. L. Moffatt, of Doncaster, architect, according to the local *Gazette*. The election is in the hands of the West Riding magistrates, and the present salary is 800*l.* per annum. On 3rd July a day will be fixed for a special meeting of magistrates, for the purpose of appointing a successor to the late surveyor.

RUINS OF OLD BATHS ON LORD PANMURE'S ESTATE IN SCOTLAND.—An interesting discovery was lately made in connection with the old castle of the Lindsays, at Edzell, near Brechin. Remains of baths are rarely to be found at old baronial buildings in Scotland; indeed, those now discovered at Edzell, are supposed to be the first that have ever been found. There had long been a tradition in the district that in addition to the many comforts enjoyed of old by the Lindsays of Edzell, they had also those of baths; but the accuracy of that idea has only now been ascertained. Little more than the foundations remain. They were attached to the south-west corner of the flower-garden. Some portions of the building are as high as 3 feet, and the foundations of the whole are quite distinct. They consist of a bath-room, dressing-room, and sitting apartment, the last of which is 16 feet square, and a lobby (entering from the flower-garden) about 16 feet long and 8 feet broad, with steps leading to the sitting-room. A narrow stair or private entrance from the lobby to the bath, and the stone pipes from the bath and the well, are in nearly as good preservation as when first erected. But for the accidental discovery of the mouth of the pipe leading from the well, the remains would have still been unknown.

THE GUTTA PERCHA COMPANY.—We have had serious statements as to gutta percha piping and the conduct of the Gutta Percha Company to plumbers, but as they affect an article of much utility, we must make some inquiries before inserting them.

THE IRON TRADE.—The collapse still continues, especially in the Staffordshire district, and there have of late been numerous failures. It is admitted that "even the most sanguine are not bold enough to think of any advance of price." The demand for iron in Lancashire and Yorkshire has improved, in consequence chiefly of a brisk start in the building trades in these districts. Beyond this, the war is, unfortunately, the best customer of the iron-masters at the present moment. A valuable discovery of ironstone, it appears, has been made at Muiravonside, in Stirlingshire.

UNCULTIVATED LAND IN FREEHOLD LAND SOCIETIES. — Unfortunately I am the possessor of some land at East Moulsey through a society; and sorry I am that I ever became such possessor, for the occupiers, or rather the proprietors, of land on either side of myself have allowed weeds to cover their land, and, in fact, in nine cases out of ten, the land is so covered a yard in height. The wind, of course, blows the seed of those weeds upon my land; so that if I weed from morning to night, trying to keep my place in order, my efforts are in vain, and my place gets overgrown with weeds from my kind slovenly neighbours' land. Cannot they let some one on the spot cultivate it for a nominal rental, and thereby turn the land to a good account? If proprietors will not see the force of this remark, it would be no more than justice that a clause should be inserted in hereafter land societies' rules, that in the case of non-cultivation within a reasonable time by the possessors, such land should be forfeited.—A WELL-WISHER TO MY NEIGHBOUR.

FIRES IN FLAX WAREHOUSES.—The alarming frequency of fires in flax warehouses at Dundee and elsewhere, is engaging the attention of the press in the north; and the *Dundee Warder* of last week has a leading article, urging the necessity of building fire-proof warehouses, and suggesting that such fires may in many cases arise from spontaneous combustion. It is a curious circumstance, that since the cholera raged in London last year, fires have been here too unusually frequent. If such fires do in many cases arise from spontaneous causes rendered more than ordinarily inflammatory by atmospheric peculiarities, it is to be hoped that the meteorological equilibrium is now re-established, and that the metropolis will neither be revisited this autumn by cholera on the one hand, nor by unusually extensive or numerous fires on the other. The deficiency of thunder about the metropolis last year was quite remarkable: we are rather reassured by the little that has already occurred in course of the present season, and we listen somewhat anxiously for more.

ELECTRO-TELEGRAPHIC PROGRESS.—The Atlantic telegraph is no longer a merely talked of project: although not yet realized, an European company, of which Mr. Brett is a prominent member, is said to have now actually entered into contracts for the completion of the work by 22nd January, 1858. The length of the wires from Ireland to Newfoundland will be some 1,750 miles: they will lie on the sandy plain which the soundings of the United States' Government have shown to stretch from land to land for the whole distance, with the exception of 200 miles next to the Irish coast, where the bottom becomes irregular and the water deeper. The actual distance is about 1,600 miles only, but it will be necessary to make a detour with the wires in order to carry them round the banks, where icebergs often ground, and where the cable might be broken by their weight and friction. The cable is to contain six wires, eight tons to the mile. Messrs. W. Kuper and Co. of London are the manufacturers. They mean to splice the ends of the portions carried to the spot in different steamers. An American company propose to form the entire American portion of the telegraph from St. John's, Newfoundland, to New York. This part of the line will be 1,200 miles in length, 71 miles of which will be under the Gulf of St. Lawrence, and the cost of the whole is estimated at a million and a half of dollars. The wires across Newfoundland will make 400 miles of the line, running through a country hitherto unoccupied and unknown. In the cutting of the path and other preparatory labours the company have had 600 men employed during the past year in that island alone. The cable to go under the Gulf of St. Lawrence has been made in this country. It contains three electric wires only, it being contemplated to lay down another of same size when the European wires have been taken across, and the business between New York and London requires it.

SARSEN STONES.—"M." asks why the Druidical sandstones in Wilts and Berks are called "sarsens?" The question itself suggests a solution. As the Saxons applied the term Saresyn to pagans, or heathen in general, and as the principal specimens of these blocks of stone were perceived to be congregated into temples popularly attributed to heathen worship, it naturally came to pass that the entire geological formation acquired the distinctive appellation of Saresyn (or heathen) stones; that is to say, after the conversion of the Saxons to Christianity. The same epithet the Saxons also applied to their invaders the Danes or Northmen, who on their coming hither were all heathen. Thus Robert Ricart (quoted in Roberts's "History of Lyme") says, "Duke Rollo le Fort was a Saresyn come out of Denmark into France." And a spot in Guernsey is still designated, I believe, the Saracen's-hill, from having constituted the temporary stronghold of certain Norman freebooters.—J. W.—*Notes and Queries.*

TENDERS

For sundry additions and alterations to house at Crowhurst Park, Battle, Sussex. Mr. W. M. Teulon, architect. Quantities supplied by Mr. Charles Poland.

Clout, Tunbridge Wells	£4,820	0	0

ADVERTISEMENTS.

TO PARENTS AND GUARDIANS.

AN Eminent Architectural Firm, in a large manufacturing district, in one of the midland counties, have now a VACANCY in their Offices for an ARTICLED PUPIL, possessing a good address, and having a taste for drawing; to whom will be afforded peculiar opportunities and advantages.—Address to A. & B. Office of "The Builder."

A YOUTH who has a taste for drawing, and can write a good hand.—Address, S. S. Office of "The Builder."

AN Auctioneer and Appraiser near the City is desirous of obtaining a PARTY, thoroughly acquainted with the profession in all its branches, to JOIN HIM, with a view of assisting him in and increasing his business. Capital required, about £600. Also, a YOUTH is required to be APPRENTICED or ARTICLED for a term to be agreed upon; if in-door, 100£; out of doors, 50£.—Address, W. C. 15, Nelson-street, City-road.

TO BUILDERS.

CLERK WANTED, as Junior or otherwise, in a Builder's Office.—Address to Y. S. Office of "The Builder."

WANTED, a CLERK, qualified to keep Builders' accounts, measure work, take out quantities, and estimate works.—Address, stating salary, to H. B. 38, Palace New-road, Lambeth.

TO BUILDERS' CLERKS.

WANTED, in the country, a Young Man, in the above capacity.—Application to be made by letter, to D. S. Office of "The Builder," stating age and terms. N.B. A draughtsman would be preferred.

TO MASONS AND OTHERS.

WANTED, a respectable Man to SUPERINTEND some WORKS in the country. He must be enabled to give security to a small amount, and have good references.—Address by letter to A. B. Office of "The Builder."

TO SHOP FOREMEN.

WANTED, as working FOREMAN of Carpenters and Joiners, a thorough practical man, well acquainted with staircase work, and accustomed to setting out working drawings and who can be referred to. Moderate salary expected.—Apply, by letter only, stating age, salary required, and where last employed, at Lambourn-cottage, Bow-road.

WANTED, a respectable YOUTH as out-door APPRENTICE to a Carpenter, Blind-maker, and Green-house Builder; small premium required.—Apply to S. SHEARMAN, 4, Prospect-place, Kingsland.

TO ARCHITECTS, BUILDERS, AND OTHERS.

A THOROUGH practical CLERK of the WORKS is OPEN to an ENGAGEMENT, to superintend any building of magnitude. Can give first-rate references to the public buildings he has superintended as clerk of the works; also to buildings he has erected on his own professional account. Terms moderate.—Address, C. D. 23A, Westbourne-grove, Bayswater. Letters prepaid.

TO CIVIL ENGINEERS AND ARCHITECTS.

A LAND and ENGINEERING SURVEYOR and DRAUGHTSMAN, aged 34, and conversant with town surveys, is desirous of an ENGAGEMENT.—Address to E. R. care of Mr. Robertson, 130, Aldersgate street, London.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION as THREE-BRANCH HAND, by a Young Man, who has been ten years in the trade. Has been accustomed to keep a builder's books.—Address to A. B 52, Exeter-street, Lisson-grove.

WANTED, EMPLOYMENT, by a Young Man, a Carpenter, either as CLERK, TIMEKEEPER, or to Work at the Bench. Has a knowledge of plans, and can keep accounts.—Address, W. T. H. 9, Gilbert's-buildings, Westminster-road.

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of building, can make plans, working drawings, &c. and has unexceptionable references from previous engagements.—Address to C. D. 6, Little St. James's-street, Pall-mall.

TO ENGINEERS, SMITHS, AND BUILDERS.

WANTED, a SITUATION as SUPERINTENDENT, or CLERK, by a persevering Man, having had twenty years' experience with smiths, founders, and hydraulic works; also builders' ironmongery; can make drawings and estimates, and keep books. Address, C. D. 14, Norton-folgate, Bishopsgate street Without.

WANTED, a SITUATION by a Person of some years' experience, in taking out quantities, estimating, measuring, and making out builders' accounts. Has a practical knowledge of the business.—Address, H. H. No. 4, Wilmot-street, Bloomsbury.

WANTED, by a young Man of respectable connections, a SITUATION as CLERK, in an Office where an opportunity is afforded of learning Land Surveying.—Apply to L. G. S. WELLS, Esq. High-street, Wycombe, Bucks.

WANTED, by a respectable Young Married Man, a SITUATION as BOOK-KEEPER, in an Engineer's Office. Satisfactory references will be given.—Address X. Y. Office of "The Builder."

WANTED, a SITUATION as CLERK in a Brickfield, or FOREMAN at a Brick and Tile Wharf. The advertiser has been in the employ of a large firm for the last five years. Has no objection to the country. Satisfactory references can be given.—Address, A. B. Cartice's Library, 3, Moreton-terrace, Pimlico.

TO BUILDERS AND PLUMBERS.

WANTED, a constant SITUATION as PLUMBER, or Three-branch Hand, by a respectable and steady married man.—Direct to A. B. 11, Draycott-terrace, Chelsea.

WANTED, a SITUATION, to superintend the Erection of New Buildings and Repairs generally, on a nobleman's estate, by a young Man, aged 23. Is thoroughly conversant with bricklayers' and carpenters' work; can prepare plans, &c.—Address, JOHN OSMER, Jun. Church-street, Cliffe, near Rochester.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION, by a young Gentleman, aged 23, who has had eight years' experience in Architecture and Building. He began his career with an eminent London Architect, and would now prefer a situation in a London Architect's Office, with a small salary if large buildings were in the course of construction. He has a general knowledge of drawing, specifying, estimating, measuring, book-keeping, and carpentering, and writes a fair hand. He was six years in a late situation.—Address, PERSEVERANCE, 25, Swinton-street, Gray's-inn-road.

TO BUILDERS BY THE SEA SIDE.

WANTED, a SITUATION, by a respectable young man, aged 23, a JOINER, who through ill health is unable to bear confined in-bench work, and who is recommended by the doctor to the sea side for a few months, where his time could be partly occupied at the bench and part in the office. Good references can be given, if required.—Address, C. F. Mr. Lawson's, 77, High-street, Whitechapel.

TO ARCHITECTS.

THE Advertiser, a good draughtsman, competent to prepare working, detailed, and perspective drawings, a tolerable colourist, and acquainted with surveying and levelling, is open to an ENGAGEMENT. Terms moderate.—Address, F. R. 17, Great Carter-lane, Doctors'-commons.

THE Advertiser, who is a good draughtsman, and acquainted with the usual duties of the profession, wishes for an ENGAGEMENT with an Architect, where he may have opportunities of improvement.—Address F. R. S City Newsrooms, Cheapside.

TO ARCHITECTS AND BUILDERS.

THE Advertiser, who has had considerable experience in practical building and surveying, having part of his time disengaged, is desirous of undertaking the EXTRACTION of QUANTITIES, on terms of mutual advantage. References given. Apply, with real name and address, to ALPHA, 22, Marchmont-street, Russell-square.

TO PLUMBERS AND BUILDERS.

THE Advertiser, who is a good and well-experienced PLUMBER, either in the jobbing or building trade, WANTS a SITUATION. Would not object to fill up his time in glazing or gas-fitting, if the place would be permanent.—Direct to A Z Office of "The Builder."

TO ARCHITECTS, SURVEYORS, AND CIVIL ENGINEERS

THE Advertiser, aged 19, wishes for an ENGAGEMENT in an Office of the above description. He is a good draughtsman and colourist, can copy or trace drawings neatly and accurately, writes a good hand, and is quick at ace units. He is acquainted with land surveying, levelling, and mapping. Has been two years in an Architect and Civil Engineer's Office, who can be referred to. Moderate salary expected.—Address, prepaid, to C. H. L. 63, Westbourne-street, Pimlico.

TO BUILDERS, PLUMBERS, PAINTERS, &c.

THE Advertiser, a good three-branch and general hand, is open to an ENGAGEMENT as FOREMAN or MANAGER of a BUSINESS, or the work on a gentleman's estate. Can measure and estimate either from plans or work, and is a good accountant. Unexceptionable testimonials.—Address, V. V. Office of "The Builder."

TO the PROFESSION GENERALLY.—Two Gentlemen, with about fifteen years' experience as Architectural Assistants and Principals in some of the first London Offices, having carried out on their own account several works, both private and public, are about COMMENCING BUSINESS. From their long experience, combined with a varied practice, they are enabled to undertake any description of work entrusted to their care. Their terms will be found to offer peculiar advantages to architects, engineers, and surveyors. Provincial architects can have their designs, working drawings, and specifications prepared with economy, punctuality, and despatch. The highest testimonials and references can be submitted.—Address to H. H. 38, Old Bond-street, Piccadilly.

A FRENCH GENTLEMAN, an Architect, who has just published a work on Architecture, and has another nearly ready, is desirous of meeting with a Partner or other interest in an Architect's Office. Being a clever draughtsman, his knowledge of general drawing, mouldings, mathematics, and natural science, would be of some advantage if pupils were kept.—Address, by letter, Mr. STAPLEY, 20, Cannon street, City.

TO MASTER PLUMBERS, &c.

A YOUNG MAN wishes for a permanent ENGAGEMENT, as THREE-BRANCH HAND, in a thorough jobbing shop. No objection to the country. Good references can be given.—Address, E. S. 3, Spring-place, Kentish-town.

TO DECORATORS.

AN experienced Practical Man, accustomed to first-rate work, and the management of a large body of men, will be at liberty in a few days, either to take the Management of Foremanship of a DECORATOR'S, PAINTER'S, or PAPERHANGER'S BUSINESS; is competent to measure, abstract, make plans, &c.—Address, O. S. 21, Denbigh-terrace, Westbourne-grove West, London.

TO ARCHITECTS AND DISTRICT SURVEYORS.

A GENTLEMAN of some experience in the profession, and a good draughtsman, is desirous of an ENGAGEMENT.—Address to M. C. W. H. 35, Great James-street, Bedford-row.

A PRACTICAL DRAUGHTSMAN and MEASURER is desirous of obtaining an ENGAGEMENT. References both to architects and builders.—Address, C. Post-office, Leigh-street, Burton-crescent.

TO BUILDERS AND OTHERS.

AN active middle-aged Man, who has been engaged in one of the leading firms in London for the last eight years, and who has just completed a job upon the London, Brighton, and South Coast Railway, is open to an ENGAGEMENT as FOREMAN or otherwise.—Address, W. S. Office of "The Builder."

TO DECORATORS.

A YOUNG MAN, who has served his apprenticeship to the Paperhanging, wishes to article himself to be finished in the Decorating.—Address, T. W. 15, Meredith-street, Clerkenwell.

TO ARCHITECTS, &c.

AN ASSISTANT, a first-rate Draughtsman, accustomed to prepare finished and working drawings, writing specifications, making surveys of dilapidations, and superintending works, &c. wishes for a RE-ENGAGEMENT, either in the office, or as clerk of works. No objection to the country.—Address, "REFORM," Office of "The Builder."

A YOUNG MAN, aged 20, who has been four years in an architect and surveyor's office, is desirous of a SITUATION. No objection to the country.—Address, A. B. 18, Chandos-street, Strand.

A MASON is in WANT of WORK, as Jobbing Mason. No objection to town or country.—Address, A. B. care of Mr. H. Driscoll, Atlas Works, Borough-road, London.

A PPRENTICE or IMPROVER.—A Grainer and Marbler of experience and ability requires an intelligent Youth, either in or out doors, he would have many excellent advantages, and first-rate practice in every branch of the art. A premium.—Address, L. C. 27, Albion-street, Hyde park.

A PRACTICAL MAN, several years accustomed to the management of work, wishes for a SITUATION as GENERAL FOREMAN or CLERK of WORKS. Good references can be given.—Address, W. X. Post-office, Cleveland-street, Fitzroy-square, Marylebone.

TO BUILDERS, CONTRACTORS, &c

AN experienced BUILDER'S CLERK is now OPEN to an immediate ENGAGEMENT, in town or country (seven years' strong recommendation from former employers).—Address, A. B. C. Office of "The Builder."

TO CIVIL ENGINEERS AND CONTRACTORS.

A GENTLEMAN desires an ENGAGEMENT as ASSISTANT on WORKS in course of construction. He has been accustomed to the routine of a civil engineer, in the office and field. Can produce testimonials. Active employment is the main object. Terms moderate.—Address, H. S. 4, Grenville-street, Brunswick-square, London.

TO MASTER BUILDERS AND PAINTERS.

A RESPECTABLE Young Man, aged 24, is in want of a permanent SITUATION as Three-branch Hand. He is a very fair Writer and Grainer, and his character will bear the strictest investigation.—Address, A. D. Burnett's Library, Southampton-street, Camberwell.

TO ARCHITECTS.

A GENTLEMAN, who has had great experience in the duties of an Office, is desirous of an ENGAGEMENT.—Address, F. T. at the Office of "The Builder."

A WRITER and GRAINER, aged 33, wishes for constant employment.—Address to E. Y. care of Messrs. Woodward and Whitens, Star Coffee-house, St. George's-circus, Blackfriars-road, Southwark.

PARTNERSHIP.—To BUILDERS.—WANTED, by a well-established Builder, doing a thriving trade in the heart of London, a young man of energy and ability who is fully conversant with the routine of a Builder's business. Capital required, about £600.—Apply, in first instance, by letter, only, stating real name, &c. to B. D. C. Office of "The Builder."

PARTNERSHIP.—An Architect, in good practice, in a large commercial town wishes for a PARTNER. A moderate premium would be required, and he would be expected to take an active part in the business.—Address, C. A. Office of "The Builder."

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES, To Clerks and others guarantees at the lowest rates. Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 32, Ludgate-hill.

THE ASYLUM LIFE ASSURANCE OFFICE, 72, CORNHILL, LONDON.
Established 1824.
CHAIRMAN—JOHN CLARMONT WHITEMAN, Esq.
Policies on healthy and diseased lives, at home and abroad, for civil, military, and naval employments.
The only office on purely proprietary principles, involving therefore no partnership among policy-holders.
For prospectuses, proposal papers, &c. apply to
MANLEY HOPKINS, Resident Director.

IMPORTANT TO YOUNG MEN DESIROUS OF MAKING A SURE PROVISION AGAINST ADVERSITY.

THE LONDON FRIENDLY INSTITUTION, established and enrolled 1834; has a reserved capital now exceeding 13,000*l.*

ANNUAL DIVISION OF PROFITS.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY,
14, Waterloo-place, London, and 30, Brown-street, Manchester.

DIRECTORS.

THE CHISHOLM, Chairman.
RICHARD HARTLEY KENNEDY, Esq. Alderman, Deputy-Chairman.

Major-Gen. Michael E. Bagnold
Francis Brodigan, esq.
Alexander Robert Irvine, esq.
John Inglis Jerdein, esq.
James John Kinloch, esq.
Henry Lawson, esq.
William Morley, esq.
Robert Frances Power, esq. M.D.
Archibald Spens esq.
Frederick Valiant, esq.
Rev. F. W. J. Vickery.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the Policy-holders, under their own immediate superintendence and control. The profits are divided annually, and applied in reduction of the current premiums. Policy-holders participate in profits after payment of five annual premiums.

The Annual General Meeting of this Society was held on the 30th of May, 1855, when a Report of the business for the last year was presented, exhibiting a statement of most satisfactory progress. It appeared that during the two last years, 1853 and 1854, between 800 and 900 new Assurances had been effected, producing an increase of premium income amounting to 14,000*l.* per annum. It also appeared that, notwithstanding the extraordinary mortality which prevailed during the last year in consequence of the visitation of the cholera, it had not been found necessary to reduce, in the slightest, the allowance previously awarded to the Policyholders.

The Members present at the Meeting were fully satisfied with the Report, and resolved unanimously that a Reduction of 31½ per Cent should be made in the current year's Premium payable by all Policy-holders now entitled to participate in the profits.

Credit is allowed for half the Annual Premiums for the first five years.

The following Table exemplifies the effect of the present reduction:—

Age when Assured.	Amount Assured.	Annual Premium originally paid.	Allowance of 31½ per Cent.	Annual Premium now payable.
	£	£ s. d.	£ s. d.	£ s. d.
20	1,000	20 17 6	6 11 6	14 6 0
30	1,000	25 13 4	8 1 8	17 11 8
40	1,000	33 13 4	10 13 8	23 4 8
50	1,000	48 16 8	15 7 8	33 9 0
60	1,000	75 17 6	24 18 0	51 19 6

A. R. IRVINE, Managing Director.

14, Waterloo-place, London.

GRESHAM LIFE ASSURANCE SOCIETY, Head Office, 27, Old Jewry, London.
Instituted A.D. M.DCCC.XLVIII. (7 and 8 Vict. cap. 110.)

TRUSTEES.

Matthew Marshall, esq.
Stephen Oldinz, esq.
William Smee, esq.
William Tabor, esq. Chairman.

This Office will be found highly eligible for every description of Life Assurance. Its main features being the publicity of its accounts, and the systematic readiness of its transactions.

Perfect security is guarantee'd by an ample paid-up capital, subscribed by persons of the highest character and respectability. The Company, moreover, being under public Act of Parliament, official copies of its accounts may be readily had at the Government Registrar's, on payment of the usual record fee.

Policies may be effected without loss of time, formalities being carried on at the office every day from Ten to Four; Saturdays Ten to Two; medical officer daily at Eleven. The Board assembles on Thursdays at half-past Twelve.

A special portion of the Society's Policies are upon first-class lives, but the Company being specifically established to include the Insurance of individuals of regular and temperate habits, in whom health may be more or less impaired, the Board openly seek to transact business of this class at equitable rates, founded upon a careful consideration of these cases. Lives of this description, declined at some offices, are accordingly open to acceptance at the Gresham.

Loans may be obtained in connection with Policies effected with the Company. The Directors have advanced, in this respect, upwards of 175,000*l.* to the members since July, 1848.

The range covered by English rates in times of peace, and under ordinary circumstances, is North of Gibraltar and Philadelphia.

N.B. Active and influential persons will be appointed as Agents on liberal terms, in districts where the Society is not already sufficiently represented.

EDWIN JAMES FARREN, Secretary.

PHŒNIX FIRE ASSURANCE COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established 1782.

ARCHITECT AND SURVEYOR.—John Shaw, esq.

SOLICITORS.—Messrs. Dawes and Sons, Angel-court.

Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, on the most favourable terms.

Persons insuring with the Phœnix Company are not liable to make good the losses of others, as is the case in some offices.

Insurances with this Company expiring at Midsummer must be renewed within fifteen days thereafter, or they will become void.

Receipts are now ready at the principal offices, Lombard-street, and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE ALBERT ASSURANCE COMPANY.
(Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.

W. B. VARDY, Manager.

HOUSEHOLDERS' and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references) may apply.

B. HODSON, Secretary.

ESTABLISHED 1803.

Full Security to Parties Assured by means of a Capital of ONE MILLION STERLING, for the last Fifty Years all Paid up and Invested.

Premiums particularly favourable to the younger and middle periods of life.

Two-thirds of Profits as Bonus.

Life Tables according to various plans, to suit the special circumstances of Insurers.

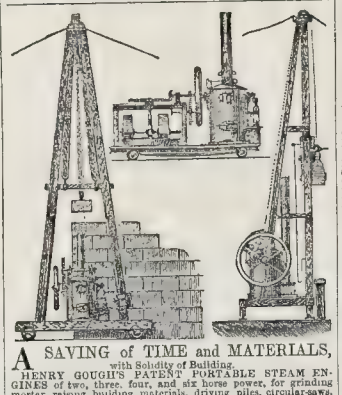
No charge for Stamps on Life Policies.

Fire Insurance Proposals entertained to any amount.

Liberality and promptitude in the settlement of claims.

Prospectuses, with full Tables and Details—and Forms—may be had at the Company's offices, or of the Agents.

WILLIAM NEWMARCH, Secretary.



N.B. Life Insurance Premiums are allowed as deductions in Income Tax Returns.

NOTICE.—To TRADE SOCIETIES, BUILDERS, and OTHERS.—The NORTH LONDON SOCIETY OF CARPENTERS AND JOINERS have REMOVED from the Horse and Groom, Great Portland-street, to 29, UPPER MARYLEBONE-STREET, Fitzroy-square.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

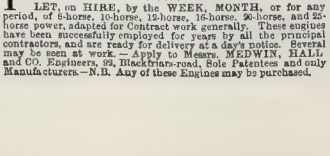
JAMES BURTON & SONS, Engineers and Contractors, John's place, Holland-street, Southwark, London.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

Railway Contractor's Office, Wellington, Salop.
December 1, 1853.

"Dear Sir,—We have much pleasure in bearing testimony of the value of your Patent Portable Engine that you fitted for us, for the construction of the tunnels on the Bacup Branch of the East Lancashire Railway in 1851, and have since used for sawing timber, and driving other machinery up to the present time, during which period, although for weeks the fire has never been out, we have no stoppage for repairs.



"We remain, dear sir, yours most faithfully,
"Mr. Gough." "DICKSON and McKENZIE."

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 70, Strand.

To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps left on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS

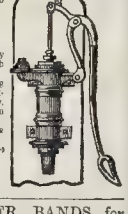
PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs. MEDWIN, HALL and CO. Engineers, 99, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.



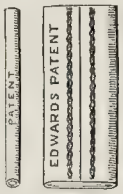
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 33s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,



which is recommended for the simplicity of its construction, and the ease with which it works.

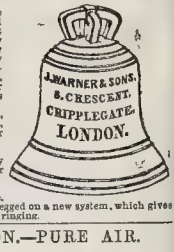
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Deer and Water Engines for raising fluids from a depth not exceeding 28 feet also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

LEATHER BANDS for DRIVING MACHINERY (EDWARDS PATENT). Engineers, Mill-owners, Printers, and others using bands for driving machinery, are respectfully invited to inspect

EDWARDS IMPROVED FOLDED BANDS,



Which for strength, durability, and straightness in working, surpass any Bands at present in use.

Best STRETCHED SINGLE BANDS, with Cemented Joints.

Improved LEATHER HOSE, SUCTIONS, FIRE BUCKETS, &c.

MANUFACTORY,
33, Great Sutton-street, Clerkenwell.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any Bells, of any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For calico Blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 8, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Matresses, Brushes, &c. are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations.—T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate-hill, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 84, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers of White Zinc Paint on a large scale in this country, are enabled, by a process, which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Those direful maladies, paralysis and painters' colic, will be entirely avoided. It is entirely free from all poisonous or pernicious property. Neither exposure to heat, nor to equal climates act upon it. The Patent Zinc White can be had for grinding in Oil, Japan, or Turpentine Varnishes, and there is used with Size, Varnish, &c. To be had of the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK, LONDON PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers in this country. Paint and Varnish Works, Upper East Smithfield, opposite the London Docks.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any alteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior indeed of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 69, King William-street, City; FREDERICK BABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Ipswich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Hath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrat.

These Cements are, they believe, the best for any purpose now in use; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The Portland Cement is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that its strength exceeds them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers', to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Laight and Park, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Building, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements. CHARLES RICHARDSON, 6, South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the first quality manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, Agent, as above.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side, 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for inside is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London. March 29, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, expressly to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c. Notice is hereby most respectfully given, that the LONDON DEPOT for these WARES is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Reports of the Juries," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Peakes," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability. Sixths and Tiles for Fireplaces and Hearths. Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 9 inch pavings, 45s. per 1,000; 9 inch pavings at 40s. per 1,000; 9 inch pavings, at 32s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT. L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, Contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

ENFIELD.—TO BE SOLD, about a MILLION good STOCK and PLACE BRICKS. For particulars, inquire of Mr. WM. FISHER, Union-court, Old Broad-street, London.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 59, Nelson square, Blackfriars-road.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey stocks, 25s. per thousand; Grizzles, 20s. per thousand; Rough Stocks, 20s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

WHITE SUFFOLK and RED FACING BRICKS.

GOWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE foreseen to Mr. Benjamin Gough, 6, ADELAIDE-PLACE, LONDON-BRIDGE.

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT. Whitefriars Wharf, Whitefriars. Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

WANTED, some second-hand RAILWAY EARTH-WAGGONS and CONTRACTORS' RAILS, about 35 lbs per yard.—Send price, delivered in London, and where to be seen, to B. T. Adams's Newspaper Office, 9, Parliament-street, Westminster.

600,000 KILN-BURNT BRICKS.—For SALE, in large or small quantities, the above excellent stock of BRICKS.—Apply to Mr CHANDLER, the North Brick-fields, Crawley-down, Crawley, Sussex

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bars, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations

Pine Planks, 12 ft. 3 in. by 11 in.....	from 3s. 6d.	each.
Spruce Deals ..... 3 in. by 9 in.....	„ 2s. 9d.	„

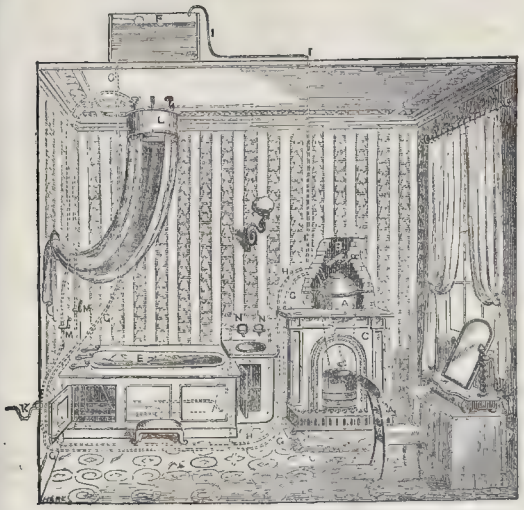
IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.



Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 21, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated form.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of the draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

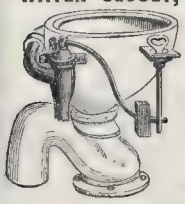
G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1¼-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.

L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, and have levers fixed on them, engraved, "hot and cold shower."



A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept continually alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.

WATER-CLOSET, WITH APPARATUS COMPLETE, FOR 13s. 6d.

DOULTON & WATTS,

LAMBETH POTTERY, LONDON.

DOULTON'S NEW ENAMELLED CLOSET-PAN, REGISTERED,

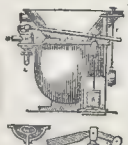
Plumbers' Brass Work of every description.



SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

UNDERHAY'S PATENT REGULATOR CLOSETS, for constant or intermitting supply, dispense with Cisterns, Service Boxes, Valves, Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been sold, and no instance of failure has occurred.

These Stool-valves are cheaper, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by CHARLES BOTTEN and SON, Brass Founders, Crawford passage, Clerkenwell, London.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E and W. STURGE, Bon-secours Wharf, City-road.

N B The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made. January, 1855.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post.

Price for Closet and Apparatus complete from 25s. and 10 feet action guaranteed. Five specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish street, near St. Paul's, London.

Crown Glass, 18 tables, 30s. per Crate.

ISAAC PARRY'S GLAZED STONE SEWER PIPES, RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY, CHURCH-STREET, DEPTFORD, KENT. ESTABLISHED UPWARDS OF 100 YEARS.

SALES BY AUCTION.

TO BUILDERS AND OTHERS.

MR. MARSH has received instructions from the Directors of the South-Eastern Railway Company to SELL by AUCTION, on the PREMISES, on TUESDAY next, JULY 3, at TWELVE o'clock, in lots, the BUILDING MATERIALS of the residence and premises, "Bells Yew House," Tunbridge Wells, within a few minutes' walk of the railway station, comprising about 125,000 bricks, two tons of lead, a large quantity of timber in roofs and quarter-partitions, flooring and joists, paving, slating, excellent four and six-panel doors, sashes and frames, marble chimney pieces, fixtures, and other useful material. May be viewed the day prior and morning of sale, and catalogues obtained at the Railway Station, at Tunbridge and Tunbridge Wells; of Mr. Edward Ridge, Surveyor to the Company, at his Office, London-bridge terminus; and at Mr. MARSH'S Offices, Charlotte-row, Mansion-house.

KENSINGTON PARK, NOTTING-HILL. Most important and eligible Plots of Freehold Building Land in this admired locality; the roads and sewers formed.

MR. ROBINS is instructed to SELL by AUCTION, at the MART, on THURSDAY, JULY 12th, at TWELVE, in several Lots, FREEHOLD BUILDING LAND, of an extremely attractive and important description, intended to form both sides of the Sussex-road, leading from the Uxbridge-road; also a continuation of Uxbridge-road North and Somerset-terrace, at Kensington-park, Notting-hill. The great beauty and advantages of this most admirable site have been most happily developed by the architect on many leases granted to prepare the plan for a building operation, which is now rapidly advancing towards successful completion. The much admired new church, now nearly finished, and the numerous commodious residences of a superior character have been erected and are in course of being finished; a glance at the plan will at once show the intimate connection of the land now offered for sale, with the most beautiful part of the estate, and the advantages to be derived from assisting in carrying out the original scheme. The land will be arranged into lots of moderate size and value, and the building public are invited to inspect the plans and to operate. The roads and sewers are already formed, at great expense. May be viewed, and particulars with plans had at the Clarendon Hotel, close to the land; of Messrs. Roy and Cartwright, Solicitors, Lothbury; at the Mart; and at Mr. Robins's Offices, Covent-garden.

TO ENGINEERS AND OTHERS COMMERCIAL-ROAD.—TO BE SOLD by AUCTION, by

MESSRS. FULLER and HORSEY, on WEDNESDAY, JUNE 27th, 1855, at TWELVE o'clock, without reserve, at Mr. FROST'S ROPE-GROUND, COMMERCIAL-ROAD, opposite the George Tavern, a powerful PNEUMATIC ENGINE and MACHINERY, for the manufacture of PATENT ICE; including a compressing engine, with iron cylinder 20 inches diameter, 31 inch stroke, gun-metal piston, valve-boxes, iron cranks, pump, 4 inches diameter, 24-inch stroke, expanding cylinder, lined with brass, 18 inches diameter, 34-inch stroke, brass piston, covers, valve-boxes and sheaths, brass pump with covers, cast-iron fly-wheel, 17 feet 6 in. diameter, two pair strong driving-wheels, 7 feet 2 in. 8 feet, and 4 feet diameter, three wrought-iron receivers, iron refrigerator, 17 feet 6 in. long, 5 feet wide, and 6 feet deep; the corrugated iron roof and front to form factory, 60 feet long, and 40 feet wide. To be viewed on Tuesday previous to the sale. Catalogues may be had on the Premises; and of Messrs. Fuller and Horsey, 13, Billiter-street, City.

TO IRONMONGERS, BUILDERS, SMITHS, COACH-BUILDERS, AND OTHERS. By

WOMERSLEY will SELL by AUCTION in one lot, at the SWAN HOTEL, HASTINGS, on WEDNESDAY, the 25th of JULY, 1855, at THREE o'clock, FOUR advantageous PLOTS of GROUND, comprising to the Old London-road, leading out of the town of Hastings, and be mile from the sea. Three of the plots are suitable for building or garden ground. The fourth plot is covered by a detached dwelling, called Orient Cottage, and has a stabling, with a flower garden in front, and a yard behind. The premises are in substantial repair, and just vacated. The view from the front of the house is down the valley, looking southward on the sea. Excellent water, good dry soil, and well drained. The dwelling house consists of a large cottage and a smaller one, communicating by an enclosed passage. The larger one contains a porch and passage entrance, two sitting rooms, store-room, kitchen, scullery, and larder. The smaller one has four bedrooms, wash-closet, and bath-room, containing a bath, &c. There is convenience on the premises for washing, brewing, and baking; also a large coal cellar, and separate water-closet. The smaller cottage has four rooms, adjoining which is a building 80 feet long by 40 feet broad, having the stabling, &c. in the centre, and a ride around of about 19 feet wide, all under one roof.—May be viewed till the day of sale by cards only, which, with particulars and conditions of sale, may be obtained of the Auctioneer, Mr. Womersley, 1, Harold place, Hastings.

BUILDING MATERIALS.—Upper Thames-street and Broad-street, City.

PULLEN and SON will SELL by AUCTION, on the PREMISES, on WEDNESDAY, JULY 4, at TWELVE, by order of the Joint Executor committee of the parishes of St. Giles, Cripplegate, and St. Luke, Middlesex, all the BUILDING MATERIALS of the large stock of WAREHOUSES, dwelling-house and premises, No. 208, Upper Thames-street, and 16, Broad-street-hill; comprising about 200,000 sound stock bricks, slates, oak and fir timber in balks and boards, sound floor boards, sashes, doors, shop front, lead gutters and pipes, large iron cranes and jibs, iron columns, stone paving, coping, and sills, and a variety of useful fixtures and fittings, &c. May be viewed the day previous.—Catalogues had of A. J. Bayliss, Esq. 22, Red Cross-street; and of Pullen and Son, 87, Fore-street, Cripplegate.

MARBLE TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—

MONDAY, 6th AUG.	MONDAY, 1st OCT. 1855
MONDAY, 3rd SEPT.	MONDAY, 5th NOV. „

Catalogues and further particulars to be had on application one week previous to each sale. The MARBLE WHARF, Thames Bank, Pimlico, close to the Grosvenor Bridge.

TO BUILDERS, ARCHITECTS, DECORATORS, AND OTHERS An important and peremptory Sale of Patent Chimney-pieces, suited either to mansion or cottage, Gothic Columns, Table Stone Vases, and other ornamental lots.

MR. KEELING is instructed to SELL by AUCTION, at the ROOMS, No. 3, Chemies-street, Tottenham-court-road, on WEDNESDAY, JULY 4th, at TWELVE for ONE o'clock, without the slightest reserve, a consignment from Berm ndsey, of all the PATENT CHIMNEY PIECES, of quality designed, Gothic Columns, large and small Table-tops, Vases, and other articles for decoration. The material is the hardest, most durable, and perfect imitation of the choicest marbles, and for which the Hyde-park Exhibition Medal was awarded. May be viewed the day previous to and the morning of sale, and catalogues obtained on the Premises, or at Mr. Keeling's Offices, 2, Edgeware road.

Building Materials, King-street, Bloomsbury

MESSRS. EVERSFIELD and HORNE will SELL by AUCTION, on the PREMISES, on TUESDAY, JULY 3, at TEN for ELEVEN, the MATERIALS and FITTINGS of THREE HOUSES, to be Nos. 46, 47, and 48, King-street, Bloomsbury; comprising sound timber, flooring, doors, sashes, wainscotting, lead in flats, gutters, and flushings; sound brickwork, and other effects. May be viewed one day previous to the sale; and catalogues had on the Premises; and of the Auctioneers, 49, Parliament-street, Royal Exchange

PLUMSTEAD POTTERY, near WOOLWICH

MESSRS. WILSON and ST. QUINTIN will SELL by AUCTION, on FRIDAY, JULY 6th, upon the PREMISES, as above, by order of the Assignees of Mr. Jas Harris, the STOCK and EFFECTS, comprising a quantity of red-ware drain pipes, chimney-pots, pantiles, sugar and lead pots, paving tiles, fire-bricks, balls, stocks, and hollow bricks, sea-kale pots, dry boarding, and a variety of useful material, three capital horses, two waggons, spring cart, also the furniture of the residence.—May be viewed the morning of sale. Catalogues had on the Premises; at the Inns in the vicinity; and of Wilson and St. Quintin, Auctioneers and Surveyors, 3, Royal Exchange.

Extensive fall of Capital Oak and Ash Timber.—Westley, near Newmarket Cambridgeshire.

MESSRS. NOCKOLDS and KING have received instructions from the proprietor to offer for SALE by AUCTION, upon the PREMISES, on MONDAY, the 30th day of JULY, 1855, at TEN o'clock for HALF-PAST punctually, on account of the number of lots—

368	Fine Oak TIMBER TREES.
16	Ash ditto.
161	Oak Saplings.
154	Ash Seconds.
733	

The timber has all been felled this season, and lies contiguous to good roads within two miles of the Bullingham Station, on the Cambridge, Newmarket, and Bury (Eastern Counties) line of railway, affording an easy conveyance to any part of the kingdom. The Auctioneers beg to call the particular attention of shipwrights, contractors, timber-merchants, and others, to this sale; many of the trees are of good dimensions, long lengths, and excellent quality, and suited for many purposes. Twenty per cent deposit to be paid on the day of sale, and six months' credit will be given for the remainder upon approved joint security.—May be viewed upon application to John Pearson, the keeper, at Westley, of whom catalogues may be had; also at the principal Inns at Newmarket, Bury, Cambridge, Royston, St. Ives, Huntingdon; and of Messrs. Nockolds and King, Land Agents, &c. saffron Walden, Essex.

Note. About 70 tons of good Oak Bark to be sold by private contract (fall of this year).

PEREMPTORY SALE.—To Coal, Brick, and Lime Merchants Builders, Engineers, Maltsters, Gas Companies, and others

MR. TINDALE will SELL by AUCTION, on the PREMISES, Honduras Wharf, Bankside, Southwark, on THURSDAY, JULY 12th, 1855, at TWELVE o'clock, all the remaining PLANT, UTENSILS, and STOCK IN-TRADE, consisting of several well-built coal waggons and carts, by Brady), horses, weighing machines, planks, trucks, and ladders, a selected assortment of the best manufacture fir goods, real Dutch clinkers, and dapentry. Other material suited to the building trade will now be day before the sale. Catalogues post free of the Auctioneer, 1, Portland-place, Commercial-road East.

TO CARPENTERS and BUILDERS.—TO BE DISPOSED OF, the LEASE and GOODWILL of a first-rate old-established COUNTRY BUSINESS, in the above lines, with a good retail Timber trade. This concern is a certain fortune to any one; there is a first-rate profitable business now, and has been carried on for many years, and may be much increased, for it has many advantages, and only wants to be seen by any one in want of a business. The only reason it is to be disposed of, is the forcible indisposition of the proprietor.—For particulars, apply to Mr. FOX, Southend, Essex.

TO ENGINEERS and OTHERS.—TO BE SOLD by PRIVATE CONTRACT, the valuable BUSINESS PREMISES, held under lease for 99 years, from the 24th of June, 1851, and the GOODWILL of the BUSINESS carried on at, and known as the West London Ironworks, Latimer-road, Notting-hill, by the side of the West London Railway, now in operation, and which connects the Great Western and London and North Western railways. The works consist of three large houses, fitting and tool shops, with good assortment of tools, erecting shop and sheds, smiths' shop, pattern-makers' shop, and pattern loft, engine and boilers, stable for two horses, large yard, with five-ton crane, the whole in good condition and repair. There is a good connection to the business, and there is a foundry next door.—Further particulars may be obtained of, and Tenders made to, Messrs. FREHERN and WHITE, solicitors, 13, Bucklersbury, Cheapside, London, who will also give an order to view the premises if required.

TO ARCHITECTS AND SURVEYORS.

TO BE DISPOSED OF, upon moderate terms, a small but increasing PRACTICE, in a rising and beautiful watering-place.—For particulars, address, S. S. 9, Studley-terrace, Larkhall-lane, Stockwell, Surrey.

TO ARCHITECTS and SURVEYORS.—An old-established watering-place PRACTICE, in the South of England, TO BE DISPOSED OF, on very moderate terms.—Address, X. Y. Z. 19, Albert-terrace, Barnsbury-road, Islington.

TO ARCHITECTS, BUILDERS, and SURVEYORS.—TO BE DISPOSED OF, an old-established COUNTRY PRACTICE, having the building trade connected, which has been successfully carried on for a long period, and the reasons for wishing to relinquish it can be satisfactorily explained. For further particulars, apply to Messrs. EVERSFIELD and HORNE, Auctioneers and Estate Agents, 49, Parliament-street, Westminster.

TO LEAD and GLASS MERCHANTS, PAPER-STAINERS, PLUMBERS, PAINTERS, and others.—TO BE LET, very desirable large and convenient PREMISES, fitted up expressly for the above business, with a first-rate opportunity for a man or firm to do trade with a moderate capital.—For particulars, apply to Mr. JOHN DAWSON Land and Estate Agent, 49, Pall-mall, and Kingston.

TO DRAIN-PIPE and STONEWARE MANUFACTURERS, and others.—TO BE SOLD, by PRIVATE CONTRACT, by order of the Assignees of Mr. Jas Harris, important LEASEHOLD PREMISES at CHARLTON, within five minutes' walk of the railway station, and most conveniently situate for the trade to the various metropolitan depôts and railways. There is a frontage of 208 feet next the river, with landing pier, a substantial brick building, enclosing four spacious kilns, a steam-power machinery, stabling, workshops, and every convenience, will be land in the rear, comprising about three acres; had at a valuation the premises ready for immediate work.—For further particulars, apply to WILSON and ST. QUINTIN, Auctioneers and Surveyors, 30, Royal Exchange.

EPSOM.—To SMITHS and IRONMONGERS.—TO BE LET, the BUSINESS of an old-established SMITH and IRONMONGER; together with the premises, which are well adapted for the business. Commencing moderate. For particulars apply to Mr. HENRY ANDREWS, Surveyor and Estate Agent, Epsom.

TO PLUMBERS, WINDOW-GLASS CUTTERS, and OTHERS.—TO BE DISPOSED OF, a BUSINESS of the above description, situate in one of the leading thoroughfares of the metropolis, and having both a trade and a private connection.—For particulars apply by letter to P. W. Mr. White's, 33, Fleet-street.

BUILDER'S BUSINESS, within three miles of the Bank.—TO BE DISPOSED OF, a respectable BUSINESS, with dwelling-house, large yard, eight workshops, including joiners', plumbers', benches; all for 500 guineas. This is an excellent opportunity for a young man going into business, as it has been established thirty years, and the rent of the house and premises is merely nominal. Direct or apply to Mr. THOMAS KING, 1, St. Michael's alley, Cornhill

TO BUILDERS with Capital.—Westbourne-terrace North.—FOUR substantial well-built CARCASES of first-rate HOUSES, in this terrace, TO BE SOLD, on advantageous terms, at low ground rents. Leases direct from the Trustees of the Paddington Estate of the Bishop of London.—For particulars apply to Messrs. UNDERWOOD and COLMAN, Solicitors, 18, Holles-street, Cavendish-square.

TO BUILDING MATERIAL DEALERS, &c.—TO BE SOLD by TENDER, the MATERIALS of a STABLE and other OUTBUILDINGS, at the rear of No. 9, Nassau-street, Soho, to clear the site for the proposed Welsh Methodist Chapel. Apply to the Architect, R. H. MOORE, Esq. 4, Queen's-terrace, Regent's-park.

TO BE DISPOSED OF, the Sixteen Years' LEASE of a HOUSE, containing ten rooms, in a healthy and respectable neighbourhood. At present let to respectable tenants, clearing the sum of 36l. a year.—Address to A. B. care of Mr. Hales, Advertising Agent, 12, Catherine-street, Strand.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 235, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery businesses to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent 30-horse engine boiler, 3 furnaces and fans, screw-cutting and other lathes, punches, anvils, blocks, tools, &c. The foregoing spacious premises are in full work, and will be supplied, and may be had on advantageous terms. Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 235, Blackfriars-road, near the bridge.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brom) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, June 30, 1855.

COMPETITIONS.

TO ARCHITECTS, BUILDERS, AND OTHERS.

THE BURIAL BOARD for the PARISH of SAFFRON WALDEN, in the County of Essex, are desirous of receiving PLANS, DESIGNS, and ESTIMATES, including ground-plans, sections, and elevations, for LAYING OUT, PLANTING, and FENCING a NEW BURIAL-GROUND, suitable ENTRANCE GATES, and for BUILDING a CHAPEL and TWO CHAPELS thereon. The ground contains about seven acres, a plan of which may be seen and further information obtained at the Office of the Clerk to the Board. The party whose plans are approved will, at the option of the Board, either be the superintendence of the works or be paid the sum of Fifty guineas for his designs. The plans and estimates must be delivered at the Office of the Clerk to the Board on or before the 25th JULY, o'clock at noon, on the 23rd day of JULY next. Each of the plans to be distinguished by a motto, and a sealed letter, similarly endorsed, containing the author's name and address, to be delivered therewith.
SIMEON J. KING, Clerk to the Board.
Saffron Walden, June 21, 1855.

COMPETITIONS.

TO ARCHITECTS.

THE BOARD of MANAGEMENT of the Central London School District are ready to receive PLANS and ESTIMATES for BUILDINGS suitable for the purposes of a District Pauper School, to be erected at Hanwell, Middlesex, and sufficient for the accommodation of 1,200 children. A plan of the ground, with particulars, may be obtained on application to me at 51, St. Mary Axe, City. The plans and estimates to be delivered sealed, with a letter also sealed, containing a reference by motto or cipher, on or before Friday, the 31st of AUGUST next.
JOHN THOMAS ROWSELL,
Clerk to the Board of Management.
51, St. Mary Axe, July 6th, 1855.

CONTRACTS.

ORDNANCE CONTRACT.—To BUILDERS.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, Pall-Mall, London, on or before MONDAY, the 16th of JULY, 1855, from parties willing to CONTRACT for the CONSTRUCTION of NINETEEN SHELL RECEPTACLES, at Gosport Lines and Priddy's Hard. Plans and specifications for the work may be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR o'clock (Sundays excepted). The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall-Mall, London, and endorsed "Tender for the Construction of Shell Receptacles at Gosport Lines and Priddy's Hard, Gosport."
Royal Engineer Office, Portsmouth, June 30, 1855.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Inspector General of Fortifications, Pall-mall, London, on or before SATURDAY, the 4th day of AUGUST, 1855, from persons desirous of CONTRACTING for various WORKS at Dover Castle. Plans and specifications of the works to be executed, may be seen by competent persons, and forms of Tender obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 15th of JULY to the 3rd of AUGUST, 1855, Sundays excepted. No other persons need apply. The party whose Tender may be accepted for the works, will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of £3,000, for the due performance of the contract. Tenders for the above works to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Ordnance Works at Dover Castle."

N.B. The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, July 4th, 1855.

NOTICE to BUILDERS. — BARRACK WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Inspector General of Fortifications, Pall-mall, London, on or before WEDNESDAY, the 1st day of AUGUST, 1855, from persons desirous of CONTRACTING for INCREASING the BARRACK ACCOMMODATION at the WESTERN HEIGHTS, DOVER. Plans and specifications of the works to be executed may be seen by competent persons, and forms of Tender obtained, at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 16th of JULY to the 31st of JULY, 1855, Sundays excepted. No other persons need apply. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of £500, for the due performance of the contract. Tenders for the above works to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Barrack Works at the Western Heights, Dover."

N.B. The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, July 4, 1855.

NOTICE to BUILDERS.—Sealed TENDERS, addressed to the Inspector-General of Fortifications, will be received at the Ordnance Office, Pall-mall, London, on or before the 7th JULY next, for certain ALTERATIONS and ADDITIONS to Pater Battery. The specifications and plans for the above service may be seen, and the form of Tender be obtained, with every information on, at the Royal Engineer Office, Pembroke Dock. The Inspector General of Fortifications reserves to himself the right of rejecting the whole or any of the Tenders.
Royal Engineer's Office, Pembroke Dock, 21st June, 1855.

THE DIRECTORS of the FINSBURY FREEHOLD LAND SOCIETY are desirous of receiving TENDERS for the FORMATION of ROADS and SEWERS on their Estate at Woodgreen, Tottenham, Middlesex.—Specification, plans, and conditions may be seen at the Offices of Mr. LAMBERT, Surveyor, 4, New Basinghall-street. Sealed Tenders are to be sent in to the Offices of the Society, 48, Bedford-row, on or before TUESDAY, the 10th day of JULY. The Directors do not bind themselves to accept the lowest or any Tender.
R. A. MARCH, Secretary.

TO BUILDERS.

GREENWICH CEMETERY.—The Burial Board for the parish of Greenwich, in the county of Kent, are prepared to receive TENDERS for the ERECTION of TWO MORTUARY CHAPELS, Entrance Lodge, &c. at the new burial ground, near Wellnall-lane, in the liberty of Kidbrooke, Kent; also for enclosing the ground on the north and south sides with oak park fencing. The plans and specifications may be seen, and further information obtained on and after SATURDAY, the 7th inst. at the Office of the Architect, Mr. SAMUEL HEWITT, Montague-close, Southwark. Tenders to be delivered on or before MONDAY, the 30th JULY instant, at FIVE o'clock in the afternoon, at the Clerk's Office, No. 1a, Burney-street, Greenwich.—The Board do not bind themselves to accept the lowest, or any of the Tenders sent in.
E. W. JAMES, Clerk to the Board.
Greenwich, July 3rd, 1855.

CONTRACTS.

CHESTERFIELD WATERWORKS.—To EXCAVATORS, MASONS, and GENERAL CONTRACTORS.—The Directors of the Chesterfield Gas and Water Company will meet at their Office, in Chesterfield, on THURSDAY, the 2nd day of AUGUST, at TWO o'clock in the afternoon, for the purpose of receiving TENDERS or PROPOSALS for the following WORKS, authorised by their Act obtained in the present session of Parliament.

CONTRACT No. 1.—The EXCAVATING, FORMING, and COMPLETING of a SERVICE RESERVOIR, of about 3¼ acres in extent, on the Holme or Linacre Brook, with the Brc Channels, Waste Weir, and other works connected therewith.

CONTRACT No. 2.—The EXCAVATING, FORMING, and COMPLETING of a SERVICE RESERVOIR, of about 1½ acres in extent, near to Club Mill, with the Waste Weir and other works connected therewith.

Plans and specification may be seen, and further information may be had on and after THURSDAY, the 19th day of JULY, on application to Mr. JOHN W. LEATHER, Civil Engineer, Leeds.
By order,
SHIPTON and HALLEWELL, Solicitors to the Company.
Chesterfield, June 21, 1855.

ASTON NATIONAL SCHOOLS.—To BUILDERS.—Persons desirous of CONTRACTING for the ERECTION of NATIONAL SCHOOL BUILDINGS, at Aston, juxta Birmingham, comprising boys', girls', and infants' schools, with class-rooms, teachers' residences, &c. may forthwith inspect the plans and specification, at the Offices of the Architect, Mr. FREDERICK EMPSON, 33, Waterloo-street, Birmingham, to send Tenders, addressed to the Rev. GEORGE PEAKE, Aston Vicarage, to be delivered on or before MONDAY, the 16th day of JULY.

TO BUILDERS.

HUGHES'S, Druggist, Holyhead. Tenders to be addressed to Captain JOHN ROBERTS, Chairman of the Holyhead Gas Committee, Holyhead.
GEORGE WALCOTT, Engineer.

[For remainder of Contracts see next page.

CONTRACTS.

NOTICE TO CONTRACTORS.—The Commissioners for the Port and Harbour of Londonderry are now ready to receive TENDERS for the execution of the PUBLIC QUAYS, CHARLES QUAY-WALL, and other [illegible] and CONTRACTORS may be seen at the Office of Mr. NEWTON, [illegible] Londonderry, on and after WEDNESDAY next, between the hours of TEN and FOUR o'clock. Tenders are to be delivered to the undersigned, addressed "Tender for Harbour Works," on or before the hour of TWELVE o'clock, on THURSDAY, JULY 26. The Board of Commissioners do not bind themselves to accept the lowest or any Tender.

By order of the Board,
CHARLES CAVE, Clerk.

Bracknell, June 23, 1855.

TO CONTRACTORS AND HIGHTERMEN.

THE EAST and WEST-INDIA DOCK COMPANY are willing to receive TENDERS for LIGHTERING and LANDING MUD taken up in the Docks. Particulars may be seen at the Dock Office, Wapping Stairs. The Tenders to be delivered at the Dock House, Bullen's-place, on or before TUESDAY, 10th JULY next.

GEORGE COLLIN, Secretary.

East and West India Dock House, June 26, 1855.

TO CARPENTERS, BUILDERS, AND OTHERS.

PARTIES desirous of CONTRACTING for the ERECTION of a HOUSE and FARM BUILDINGS on the Estate of Sir William Bowyer Smythe, Bart. M.P. at Hoy Mill Hall, near Ripon, Yorkshire, are requested to think the matter as soon as possible, and particulars may be seen, on and after the 4th JULY, at Mr SMITH'S, Peacock Room, of the above estate; and at Mr. BELL'S, Builder, Ripon. A sketch of the proposed House, Stables, and Barn, may be seen at the Office of Mr. MICKLETHWAIT, Architect, Bond-street, Bradford, to whom Tenders are to be delivered on or before the 14th day of JULY next, at TWELVE o'clock at noon, addressed "Tender for the Buildings at Hoy Mill Hall." Copies of the specifications may be obtained on application to Mr. MICKLETHWAIT, on payment of 1s. Tenders will be received for any one of the contracts, but a preference will be given to the persons tendering for the whole. The Local Board of Health do not bind themselves to accept the lowest or any Tender.

By order,
GEO. BABB, Clerk.

Great Grimsby, June 19, 1855.

The Time for sending in Tenders for the above Works has been EXTENDED until the 28th of JULY instant.—By order,
GEO. BABB, Clerk to Grimsby Local Board of Health.

Great Grimsby, June 3rd, 1855.

WORTHING LOCAL BOARD of HEALTH.—WATER-WORKS. To EXCAVATORS, CAST-IRON PIPE LAYERS and OTHERS.—The Local Board of Health hereby give notice, that they are prepared to receive TENDERS, from parties willing to undertake the following contracts:—
CONTRACT No. 14.—For EXCAVATING the LAND and for LAYING and JOINTING CAST-IRON WATER-PIPES FIXING SLUICE VALVES IN HOUSE DRAINAGE &c.

Specifications, schedules and forms of Tender (the minimum the set), may be obtained, together with any further information required, on and after MONDAY next, at the Office of ROBERT RAWLINSON, C.E. No. 34, Parliament-street, Westminster. Sealed Tenders to be delivered at the Office of the Local Board, Worthing, before TWELVE o'clock, on TUESDAY, the 14th day of JULY, endorsed "Tender for Contract, No. 14."

By order of the Board,
WM. HUGH DENNETT,
Worthing, June 21, 1855. Clerk to the Local Board.

TO BUILDERS.

TENDERS are required for the ERECTION of SCHOOLS and TEACHER'S RESIDENCE, for the District of St. Matthias, Bristol, to be built on the Weir, adjacent to the Church of St Matthias. The plans and specification will remain at the vestry room of the church from MONDAY, the 9th, till WEDNESDAY, the 18th inst on which latter day the sealed tenders are to be forwarded to the Architects, Mr NORTON, 24, Old Bond-street, London. Further information may be obtained on application to the incumbent, the Rev ADAM CLARKE, Rowley, or of the Architects.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of a CHAPEL, in NASSAU-STREET, Soho, may see the plans and specifications, &c at the Office of the Architect, R. H. MOORE, Esq., 3, Queen's-terrace, Regent's-park, from MONDAY the 9th, until the 23rd, when the Tenders are to be delivered. The Committee will not be bound to accept the lowest Tender.

TO BUILDERS

PERSONS desirous of TENDERING for the WORKS required to be done in the ERECTION of a five-story WAREHOUSE, at Leicester, may inspect the drawings and obtain the quantities, by applying at the Office of the Architects, Messrs FLINT and SHENTON, Leicester, on and after FRIDAY, the 13th instant. The lowest Tender will not necessarily be accepted. Leicester, July 4, 1855.

WISBECH S. PETER'S, CAMBRIDGESHIRE.—Builders desirous of CONTRACTING for the RESEATING and RESTORING the PARISH CHURCH of S. PETER, WISBECH, may inspect the drawings and specifications, on applying to Mr. JAMES WOODS, Churchwarden, Wisbech; and further particulars required may be obtained from the Architects, Mr. GEORGE DARLEY, of Lowestoft, or Mr. WILLIAM SMITH, 12, James-street, Adelphi, London.—Tenders to be delivered on or before MONDAY, the 23rd of JULY instant, addressed to the "CHAIRMAN, Wisbech, and to be sealed, and endorsed "Tenders for the Church Restoration." The Committee do not bind themselves to accept the lowest or any Tender. Good and sufficient security will be required for the due performance of the works.—By order of the Committee

ARTHUR CHAS COPEMAN,
WM. A. JEPPS, Esq. } Secretaries.
FRED. M. METCALFE,

Wisbech, July 3, 1855.

IRON FOUNDRY,
HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Bracket Stairs, Plate Copings, Tie Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rixers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank public building, or licensed establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse lane, Birmingham.

CONTRACTS.

TO BUILDERS.

PERSONS desirous of TENDERING for the ERECTION of FARM BUILDINGS, at Berwick Hall, White Colne, Essex, may see the plans and specifications on and after FRIDAY, JULY 6th, at the offices of Messrs. BIDDELL, SON, and CHANCELLOR, Architects, Chelmsford, to whom Tenders, addressed to Mr. [illegible] Berwick Hall, White Colne, are to be delivered on WEDNESDAY, the 11th inst. [illegible] The lowest or any Tender is not necessarily accepted.

THE Society of Clement's Inn are ready to receive TENDERS for the ERECTION of two third-rate HOUSES, to form a Court, Clement's Inn, in accordance with the plans and specification, at Mr. BUNNY'S, No. 5, Holborn-court, Gray's-inn. Tenders to be delivered at the above address, on or before WEDNESDAY, JULY 11, at 12 o'clock, when the Tender will not necessarily be accepted.

GRIMSBY LOCAL BOARD of HEALTH.—WATER-WORKS and DRAINAGE. To CONTRACTORS, ENGINEERS, IRON-FOUNDERS, and OTHERS. The Great Grimsby Local Board of Health are prepared to receive TENDERS from parties willing to undertake the following CONTRACTS:—ENGINE, BOILER, PUMPS, STAND and PIPE, for the lift of raising 2,000,000 gallons of water, 70 feet high, in twelve hours.—for the SUPPLY of [illegible] TONS of CAST-IRON WATER-PIPES, SLUICE VALVES, HYDRANTS, &c.; for LAYING the said PIPES, &c.; for the ERECTION of the PUMPING ENGINE-HOUSE, with BRICK CHIMNEY, and GLAZED EARTHENWARE PIPES. The drawings and specifications may be seen, and any other information obtained, at the office of Mr. MICKLETHWAIT, the Surveyor to the Local Board of Health, on and after MONDAY, the 9th JUNE next. Sealed Tenders to be sent in to the Office of the Clerk to the Local Board of Health, on or before the 14th JULY next at TWELVE o'clock at noon, endorsed "Tender for Pumping and Waterworks." Copies of the specifications may be obtained on application to Mr. MICKLETHWAIT, on payment of 1s. Tenders will be received for any one of the contracts, but a preference will be given to the persons tendering for the whole. The Local Board of Health do not bind themselves to accept the lowest or any Tender.

By order,
GEO. BABB, Clerk.

Great Grimsby, June 19, 1855.

The Time for sending in Tenders for the above Works has been EXTENDED until the 28th of JULY instant.—By order,
GEO. BABB, Clerk to Grimsby Local Board of Health.

Great Grimsby, June 3rd, 1855.

TO BUILDERS.

PARTIES desiring to TENDER for the ERECTION and COMPLETION of TWO third-rate HOUSES now in course of erection in Wakefield, Cleveland-road, as per the plans, sections and specification, at Mr. RAYNUS, No. 5, Hill-street, Leeds, Upper Head Row, on or before WEDNESDAY, JULY 11th. Tenders to be delivered at the above address, on or before WEDNESDAY, JULY 11, at 12 o'clock, when the Tender will not necessarily be accepted. Security will be required for the due performance of the work. The lowest tender will not necessarily be accepted.

TO BUILDERS.

PARTIES desiring to TENDER for the ERECTION and COMPLETION of TWO third-rate HOUSES now in course of erection in Wakefield, Cleveland-road, as per the plans, sections and specification, at Mr. RAYNUS, No. 5, Hill-street, Leeds, Upper Head Row, on or before WEDNESDAY, JULY 11th. Tenders to be delivered at the above address, on or before WEDNESDAY, JULY 11, at 12 o'clock, when the Tender will not necessarily be accepted. Security will be required for the due performance of the work. The lowest tender will not necessarily be accepted.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a VILLA RESIDENCE, at Oulton, near Stone, in the county of Stafford, may inspect the plans and specifications at our office, from MONDAY, the 9th, till SATURDAY, the 21st of JULY, when the Tenders must be delivered to us, properly sealed. The lowest Tender not necessarily accepted, and proper references required.

WARD and SON, Architects.

Albion-street, Hanley, Staffordshire, 28th June, 1855.

N.B. Oulton is about a mile from Stone, which is a first-class station of the Norths Staffordshire Railway.

TO ENGINEERS.

THE COMMITTEE of TRUSTEES of the POOR of the PARISH of ST. LEONARD, SHOREDITCH, will meet in the Vestry-room, Shoreditch Church, on THURSDAY, the 26th day of JULY, 1855, at SIX o'clock in the Evening, to receive TENDERS from persons who may be willing to contract for the supply and erection of a FOUR-HORSE TABLE ENGINE and a Cornish Boiler; together with the erection of a Chimney Shaft, formation of a Coal Store, and other Works, at their Workhouse, Kingsland Road. The drawings and specification may be seen at the Workhouse, and other information obtained upon application to Mr. T. E. KNIGHTLEY, Architect, 26 Cannon-street, City, on and after DAY next. The Tenders are to be sealed, and must state the names of two substantial persons who will be ready for their signature in the amount of the contract, and the Trustees will not pledge themselves to accept the lowest or any Tender.

By order,
HENRY EDWARDS, Clerk.

MIDLAND RAILWAY.—The Directors are now ready to receive TENDERS for the different works in the HEAD BOARD OFFICES, and making sundry ALTERATIONS and ADDITIONS to the Weighing Shed, at Leeds. The drawings and specification may be seen, and additional information obtained up to an early hour on the Engineer's office at the said station, on and after MONDAY next. Tenders are also out for the whole of the works, to be forwarded, addressed to the Works and Stock Committee, Derby station, not later than TEN A.M. on TUESDAY, the 17th instant. The Directors do not bind themselves to accept the lowest or any Tender. By order,

JOSEPH SANDERS, Secretary.

Derby, July 1, 1855.

TO BUILDERS AND OTHERS.

THE BURIAL BOARD for the PARISH of DEAL, in the County of Kent, hereby give notice that they intend to enter into CONTRACTS for the BUILDING of TWO CHAPELS and a PORTER'S LODGE, in the Burial Ground provided in and for the said parish, under the Burials Act, and 17 Vict. c. 134, and also of WALLS to ENCLOSE the GROUND, and for SETTLING and FIXING IRON FENCES and GATES, in and all for the same, according to the plans and specifications prepared for the Burial Board by Mr. J. MESSENGER, of Deal, some. The Burial Board hereby request any person or persons willing to undertake the above contracts or either of them, to make proposals for that purpose, to be offered to the Burial Board, at the Office of the Clerks to the Board, in Queen-street, Deal, at or before noon of the 21st day of JULY, 1855, under sealed Tenders, marked "Tender for Works for the Deal Burial Board." The proposals and Tenders to specify a separate price for building the Chapels and Porter's Lodge, and a separate price for building the walls and for erecting and fixing the iron fences and gates. The terms and specifications of the several works, are at the Office of Mr. J. MESSENGER, Architect, Deal, where Parties contracting will be required to enter into a bond with sufficient sureties, for the due performance of the works. The Burial Board will not be bound to accept the lowest or any Tender.

By order of the Board,
MERCER and EDWARDS, Clerks.

Deal, June 29, 1855.

TO BUILDERS AND OTHERS.

PERSONS desirous of submitting TENDERS for completely FINISHING two VILLAS, in Mildmay-park, Balls-pond, near Hackney, may see specifications of the several works required to be done on application to Mr. JOHN FOWLER, Surveyor, No. 4, Hardwicke-court, Temple, from the 6th JULY, between the hours of TEN and FIVE, until WEDNESDAY, 11th JULY, at FOUR o'clock, on which day Tenders are to be delivered.

TO BUILDERS.

THE MAYOR, ALDERMEN, and BURGESSES of the BOROUGH of CAMBRIDGE are desirous of receiving TENDERS for the ERECTION of a CONDUIT, on the Market hill, in the said Borough, according to a plan and a specification, prepared by GOODMAN & HILLS, Esqs. Architects, and which may be seen at 15, Chancery-lane, 13, John-street, Adelphi, London, or at my Office, in the Guildhall, Cambridge, on and after TUESDAY, the 10th day of JULY inst. Tenders, directed to the Corporation Committee, are to be sent in to me, or to the Council, on or before TUESDAY, the 24th day of JULY instant. The party tendering must specify the names of two responsible persons, who are willing to become bound for the performance of the contract. No member of the Council can be concerned as surety. The committee do not pledge themselves to accept the lowest or any Tender. By order,

C. H. COOPER, Town Clerk.

Guildhall, Cambridge, July 4, 1855.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction, being more extensively used, and its application rendered [illegible] nearly EVERY DESCRIPTION of BUILDING, whether public or private.

The system combines ECONOMY, with great [illegible] construction, perfect safety from fire, increase [illegible] and many other important advantages.

The floors and roofs are formed by a combination of [illegible] wrought or cast iron, with concrete, so constructed [illegible] the [illegible] beam, after a beam of material one, and [illegible] the whole, thus possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface of [illegible] ordinary flooring boards, or of cement, asphalte, tiles, slate, or other materials.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended, at the desire of all who are interested in building, both as ensuring the necessary safety, and also as [illegible] and [illegible] saving the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent.—Mr BARRETT, 19, York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES a MANCHESTER, by FIRE.—Messrs. Ryands and Son Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after [illegible] exposure to intense heat.

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, Hyde-street, Manchester, March 10th, 1854.

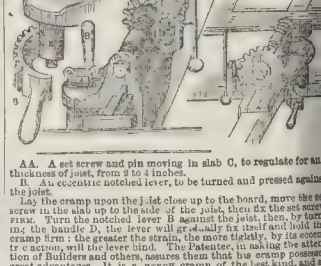
"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 2 years ago, for our late offices in New High street, has been the means of preserving our books, cash, notes, & c., [illegible] from the ruins of the fire of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks and keys answered to their respective keys, and all the contents received [illegible] except that one of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."



CHUBB'S LOCKS, with all the recent improvements. Cash, Deed, and Paper Boxes, of all sizes; Fire-proof Safes and Chests from 10s to 80l. Prices for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsefields, Wolverhampton.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL. Manufacturer of Wrought Iron Tube for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON. Manufacturer of Rim and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 3 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by forcing the handle D, the lever will gradually fix itself and hold the cramp firm; the greater the strain, the more rigidly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a RAPID cramp of the best kind, and a well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be as readily and safely used than any yet brought out, and at the same time it is light and portable.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentee, Mr. LEWIS JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 93, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought into perfect use that does three separate kinds of work by one machine, and as it is self-feeding, it does not require any skill or care in using like the other inventions introduced. It can either be worked by hand or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Long-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for wholesale Trade of Manufacturers for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times execute short notice and apply them. S. W. and Co. beg to make that they now [illegible] their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished cotton mills and factories in the world with their Machines for home and foreign use.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and office gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle trees, sugar-mills, &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and non-rising spring, swing, double acting, gate, and other Hinges. Floor centres, &c. &c. Orders for Hinges only, addressed to Mr J. WALBY, sole Agent, at the Warehouse, 30, Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

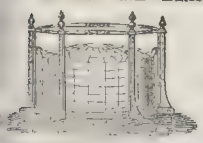
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

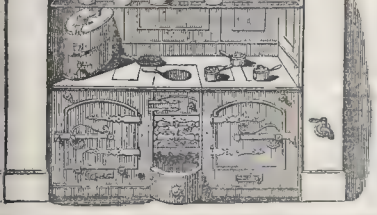
PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

SKAIFE'S GALVANIZING WORKS,

COMMERCIAL-ROAD, LIMEHOUSE, LONDON.



Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.

Patent Galvanised Iron supplied in every form.—Sheets plain and corrugated.—Roofs fixed complete.

J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.

AN ALLOWANCE TO THE TRADE.

FLAVEL'S PRIZE KITCHENER.

The only Kitchen Range which obtained a Prize Medal and special approbation at the Great Exhibition, 1851.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

SOLE AGENTS:

BENHAM AND SONS,

19, WIGMORE-STREET, LONDON;

and at the Crystal Palace, Sydenham.

MOREWOOD and CO. (late Morewood and Rogers),

Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham.

PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets,

PLAIN or CORRUGATED, and Curved, of all Gauges.

Manufactured articles always kept in stock, such as pails, scoops, bowls, trotters, skirts, &c. of all sizes.

Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Pipes, Stamped and Moulded Gutters, Wire, Wire Netting, Staples, Nails, Rivets, &c.

Estimates given for Roofs, and every description of Galvanized Iron Building at the

OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

PATENT PLUMBIC ZINC.

GREAT REDUCTION IN PRICE.

PLUMBIC ZINC is a perfect combination of Lead and Zinc, and requiring to be more than one-fourth or one-fifth as thick as Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Lead.

No. 11 gauge weighs about	18	oz.	per foot	super.
" 12 " "	20	"	"	"
" 13 " "	23	"	"	"
" 14 " "	26	"	"	"

Full particulars and the reduced price sent by post on application to

MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

PLAIN, CORRUGATED, PAINTED, or GALVANIZED.

Estimates and Drawings furnished on application.

Experienced Workmen sent to all parts of the Country.

MANSION-HOUSE PLACE, and LIMEHOUSE, LONDON; BERKLEY-STREET, BIRMINGHAM.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON,

For Roofs, Flats, Cisterns, Gas Tubing, Gutters, Pipes, Feeding, &c.

To be obtained only at

TUPPER and CARR'S WAREHOUSES, REGENT'S CANAL DOCK, LIMEHOUSE, LONDON; or BERKLEY STREET, BIRMINGHAM.

Rods, Bars, Rods, Hoops, Nails, Rivets, Screws, Wire, and Manufactured Articles, Pails, Coal-scoops, Buckets, Pumps, &c. always in Stock.

N.B. An allowance to the trade.

Address all letters to TUPPER and CARR, 3, MANSION-HOUSE-PLACE, CITY, LONDON.

PATENT IRON ROOFING and IRON BUILDING MANUFACTORY (late the Coalbrookdale Company's premises), 13, James-street, Liverpool.—N.B. Parties are particularly requested to note the address, LIVERPOOL. FRANCIS MORTON and Co. will supply estimates, plans, &c. for Iron Roofs and Iron Buildings, painted or galvanized, to be erected in any part of the United Kingdom. Roofs and buildings prepared for shipment abroad. F. M. and Co. possess advantages from their long experience, and are enabled to execute work on the most moderate terms consistent with good materials and workmanship.

N.B.—The attention of Agriculturists and Landed Proprietors is particularly invited to their Corrugated Iron Farm Buildings, Sheds, Roofs, &c.

UNDER PATRONAGE of the ENGLISH and FRENCH GOVERNMENTS.

Portable Galvanized or Painted Corrugated Iron Dwellings, Barracks, Hospitals, Stables, Warehouses, Theatres, Billiard and Concert Rooms, &c.

IRON ROOFS,

Patent Corrugated, Galvanized, and Painted, Wrought-Iron, principal, Glass and Slated Roofs, to any span.

Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.

Engineers' and Builders' Castings of all kinds manufactured by

JOHN WALKER,

Builder, Contractor, and Ironfounder, Mill-wall, Poplar.

Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.

N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

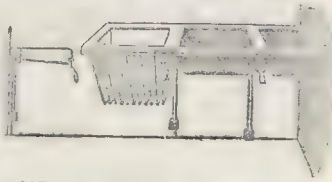
JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.

Offices: 12, Fenchurch-street, City.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. are much struck with confidence in the INFRANGIBLE COOKER, a COAL fire-grate of equal economy, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In the ironmongery department of DEANE, DRAY, and CO.'s extensive premises, Monument, London-bridge, may be seen a variety of other cooking apparatus, with prices affixed, and the whole will be forwarded free by post. DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.

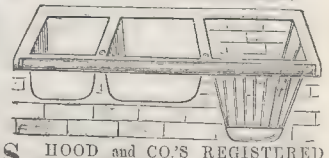
ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DERKIN'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful model of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.



HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,400 feet in length, at the small expense per day in fuel and labour of 1s. 8d. This achievement in heating by hot water is unparalleled.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, soot doors, for the same, hot water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and screw pipes, &c. also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron bridge wharf No. 9, Bankside, London, near the Southwark iron bridge.



DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42, Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required and a saving of from 20 to 30 per cent being effected in the cost of fuel. Prospectuses, with testimonials, sent on application.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well managed stable should be without these fittings, being a very durable appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fixtures. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 9, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled

Castings Warehouse removed from 81 to 83, Upper Thames-street.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at 1s. 6d. per foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

14, Stanhope-street, Clare-market, London.
No. 1764, BRITISH SECTION, HARDWARE DEPARTMENT, PARIS EXHIBITION, 1855.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.
This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the means extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.
Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.
Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. ITALIAN and GALWAY MARBLE QUARRIES, Depôt, Whitehall Wharf, Parliament-street, London. To SCULPTORS, MARBLE MASONS, & BUILDERS.—Twenty eight blocks of Statuary, Sicilian, &c. now landing at Whitehall Wharf, of Tanfield, from Leghorn. Mr FRANKLIN begs to call attention to the above; also to his extensive stock of Marble in blocks, consisting of Statuary, Vein, and Sicilian, Irish Black and Green, Dove, Bardilla, Sienna, Brocatella, Rouge Royal, St. Anne's, Emperor's Red, Black and Gold, &c. &c. which he is enabled to offer at reduced rates, on advantageous terms.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, a joining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account.
Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

By Her Majesty's  Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hare-hill, Park spring, and other stone, in blocks, slabs, landings, and head-stones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing Mills, Commercial-road, Pimlico, London.

SERPENTINE.—The Lizard Serpentine Company manufacture and also sell stone in block or slab. The stone now raised is from the lower beds, and as sound as the coloured marbles with which it competes in price.—Chimney pieces, columns, fonts, &c. &c. on view at the Show-rooms, Surrey-street, Strand.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOARE, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—FREGELIS and TAYLOR, 3, Pinner-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

TO BUILDERS and Others in Town and Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

VALENTIA SLATE SLABS.
The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Office, Model Prison, Pentonville, and other Penitentiaries; Mansion Floors in Bedfordshire and Hertfordshire, Breweries, the Pier Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; and by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvedere-road, where terms may be obtained.

PLATE GLASS AT GREATLY REDUCED PRICES.

THE UNION PLATE GLASS COMPANY,

RESPECTFULLY INFORM THE TRADE, THAT IN ORDER TO MEET THE PRESENT DEPRESSION, THEY HAVE MADE A VERY CONSIDERABLE

REDUCTION IN THE PRICES OF POLISHED PLATE GLASS

FOR GLAZING PURPOSES.

Lists of Prices may be obtained at the places named in another advertisement in this publication.

THE WORKS—POCKET-NOOK, ST. HELEN'S—JULY 2, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, is manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of the invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the ornament of our noblest buildings. Groups, statues, Vases, Fountains, and Architecture. Enable Establishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B can be referred to the whole of the embellishments of the external part of Cliveden House, his Grace the Duke of Sutherland's; also Tottenham and King-land Churches, the turrets to the Camden-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 13 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen street; and other works elsewhere, too numerous to mention. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind on releasing the cord, and avoiding winding on hooks. For calico blinds its action is perfectly noiseless, as it works on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 9d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Matting, Brushes, Netting, &c are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations. T. TRELOAR, Cocoa nut Fibre Manufacturer, 42, Ludgate hill, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 11½, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licences for their use. From the facilities thus afforded to companies to negotiate for a number of inventions under one arrangement, a considerable saving in cost will be effected. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to
WILLIAM HOWDEN, Secretary.

NATIONAL PROVINCIAL PLATE-GLASS INSURANCE COMPANY. Chief Office, 37, Lincoln's-inn-fields. The directors, in calling the attention of architects, builders, and others, to the claims to their support which the operations of this company, during the past year, have presented, are happy to be able to state, that the success anticipated in the prospectus has been more than realized, and that the business of the company has increased to a degree unprecedented in the history of any similar institution. The directors, in giving this statement, feel that the best evidence they can adduce of the value of the company's operations is the fact that the renewals of policies have been in a ratio of nearly 90 per cent. on the number of expiries, and that the gross premiums have increased from £1,500 to £5,000 per annum. The directors, in order to show the confidence they have in the stability of the company, have determined to offer an inducement to carefulness on the part of the insured, a participation in the profits will be allowed, where no claim shall have occurred within a stated period. The rates for insurance charged by this company are as moderate as can be allowed consistently with security, and every facility is afforded to parties to avail themselves of the security, by effecting insurances on the sums insured by glass in buildings in course of erection. Agents wanted.

THOMAS DRAKE, Manager.

LAW PROPERTY and LIFE ASSURANCE SOCIETY, 30, ESSEX-STREET, STRAND, LONDON.

Eighty per cent. of the profits do you among the assured. The following are specimens of bonus declared at the division of profits in May, 1854:—

STREET ARCHITECTURE. By VICTOR DELASSAUX and JOHN ELLIOTT, in a Series of Designs for Shop-fronts and Fronts, in Twenty-two Steel Plates, elaborately executed, with explanatory Letter-press.

London: JOHN WEALE, 59, High Holborn.

Now ready.

A LIST of NEW and CHOICE BOOKS recently added to MUDIE'S SELECT LIBRARY.

A LIST of SURPLUS COPIES of RECENT WORKS withdrawn from circulation, and offered at greatly reduced prices for cash.

CHARLES EDWARD MUDIE, 12, New Oxford-street, London; and 154, Cross-street, Manchester.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations from the present Value of Materials and Labour. Arranged for Architects and Surveyors, assisted by several experienced Measuring Surveyors. Illustrated in Detail by Steel Engravings and numerous Wood-cuts. Royal 12mo. price 8s. neatly bound.

London; published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had New Editions, uniform, of the following Practical Architectural Works

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET MAKING. Revised by THEODOLD PRICE, assisted by numerous Contributors of Practical Experience. With Additions and Improvements by JOSEPH GWILT, Esq. F.S.A. Illustrated by Fifty-four Steel Plates, and numerous Wood-cuts. Double vol. 4to. price £2 2s. cloth.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING. Revised by THEODOLD PRICE, and much enlarged, containing a new and complete System of Lines for Stone-cutting, for the use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c., and a Glossary of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of 900 Steel Plates, and numerous Wood-cuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of each Architecture. Illustrated in upwards of one Hundred Steel Engravings, drawn by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 40s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. BROOKS, Architect. Beautifully engraved on steel, with instructions for building, and the estimated Cost of each Design. Twenty parts at 3s. or 30 Plates, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. By S. H. BROOKS, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 15 Plates, 15s.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE containing a series of Designs for Decorating Apartments and Staircases, and suited to the various styles of Architecture. By H. WARD, A. and A. WARD, House Decorators to her Majesty. Ten Parts, with 30 Plates and 30 Cards, 22s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining and Marbling; and on the Origin of Colour, the Laws of Harmony and Contrast, the Manufacture of Pigments, Varnishes, &c. By W. M. HOOPER, Esq. A. with Loads by various Specimens of Hard-wood Graining and Marbling. Ten Parts, with 30 Cards, 12s.

8. THE ENGINEERS' and MECHANICS' ENCYCLOPEDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Manufacture. By JOHN BOURNE, C.E. Illustrated with upwards of 1,000 Wood Engravings. In two vols. 4to. price £2 2s. cloth.

The Author has taken great pains to render this work, which has developed many of the important facts since the first publication, in 1836, of the Encyclopædia. The Inventions and Discoveries of the last twenty years have received the attention of the Author, for, as the value of each was tested by experiment, a description was given of such principle. By this system of revision, the work is now brought down to the present time, and will be found to contain all the most recent improvements in the Steam Engine, Railways, Electric Telegraph, Navigation, Mining, Metallurgy, Civil Engineering, Architecture, Manufactures, &c. &c. The Author has also taken care that the work should be kept up to the present time, by the publication of Supplements, which will be issued from time to time, so that it may not become obsolete, but be faithfully expressing "the existing state of Engineering and Mechanical Operations throughout the World."

The two large 4to Volumes, of 1,400 pages, and 1,000 Engravings, are now complete, and may be had of all Booksellers.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper. Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between Land 36, Fleet); or to Mr. H. B. BARLOW, Office for Patents, Ducie place, Exchange, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's park.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. For Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Drawing, and Colouring. Making Finished and Working Drawings. Preparing Specifications. Taking out Quantities. Estimating, &c. &c. Terms—Two Pupils Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guilford-street, Russell-square.

MATHEMATICAL DRAWING INSTRUMENTS JOHN ARCHBUTT, 20, Westminster-Bridge-road, London (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS—External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, or terms that will instruct as proper temporary assistance given, in getting up Views, Elevations, Sections, Plans, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone place.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BUKT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERS AND PIPES. Estimates given for large or small quantities. Builders and Plumbers supplied with the necessary and other Filters at trade prices. These filters, at one, two, three, and four guineas each, supplying 25, 50, 75, and 100 gallons per day, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 50,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made of any required bore or pressure, it is comparatively flexible, cool, pliant, has great power of resisting the effect of frost, and what is of still higher consideration, it is perfectly innocuous, and will not impart (if desirable proper care is practised by using leaden pipes with gutta percha. Further information may be obtained on application to the Patentees, MOSES STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City-road, London.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is at JOSEPH WHITEHOUSE'S, WAREHOUSE, 24, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment of the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO BUILDERS.—Aldershott.—For SALE, several SITES of BUILDING LAND, free of land-tax and tithes, situate at Ash, opposite the encampment at Aldershott, commanding a most extensive view of this picturesque neighbourhood. The lands are laid out in plots marked, containing frontages of 50 to 150 feet by 90 to 200 feet in depth, affording an opportunity for investment in building ground to be met with. Terms, 10 per cent. down, and the remaining payment of Sec-Plans, with prices affixed, may be had of Mr. MCKENZIE, Dover Arms, Ash; or of Mr. PULLING, at Southampton-street, Strand.

BUILDING LAND WANTED.—Wanted to purchase, on Lease, a FEW ACRES of FIRST-RATE BUILDING LAND, in or near London. Particulars to be sent to Mr. EDWARD SALTER, Architect, 123, Cannonry lane, City; or 8, The Grove, Hammersmith.

THE HOUNSLOW ESTATE.—The CONSERVATIVE LAND SOCIETY. The HOUNSLOW ESTATE is NOW ALLOTTED, at the office, No. 31, Norfolk-street, Strand, London, on THURSDAY, the 19th of JULY, 1855. The Hounslow Estate is in the high road from the Metropolis to the Western counties, within half the distance of the station, and by the branch to Windsor and Isleworth. Letters are Thursday Letters—rental £2 10s. The house property is at 12s. and there are allotments of £10 each. The majority of the sites offer sufficient frontage for the erection of two houses each to front it will, therefore, be open to any two members, either of whom holds a single share of choice, to choose a 30l. plot, and afterwards elect to have such piece of land divided separately conveyed at the cost of each entrance money. For plans, price 6d. each, or 10d. if sent by post, apply to

CHARLES LEWIS GRUNEISEN, Secretary.

BRIGHTON ESTATE.—On JULY 19, the first and second portions of the ROUND HILL PARK ESTATE, will be sold by auction under the direction of the holders of rights, on terms novel and most advantageous to circumstances.

THE READING ESTATE.—On the 19th of JULY, the 32d PLOTS which existed on the READING PLAN of the SOCIETY, each 50 feet by 100, in consequence of the number in which the profit of pieces of not less than a rood of estate at the last-named scale.—Plans and particulars may be had of Mr. LEWIS GRUNEISEN, Secretary.

Offices, No. 31, Norfolk-street, Strand.

GUILDHALL, July 3, 1855.—The Committee for letting the City's Lands will meet at Guildhall, on WEDNESDAY, the 11th JULY inst. at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE, No. 23, on the south side of New Broad-street; a House, No. 2, on the north side of South-place; a House, No. 67, on the west side of Paul-street; a House, No. 13, on the north side of Banner-street; a House, No. 15, Tabernacle square; and a House, No. 58, on the east side of Tabernacle walk. Printed particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall.

FERDINAND BRAND, Comptroller.

The Builder.

VOL. XIII.—No. 618.

IN our last article on the history of architecture,* we alluded to the importance of understanding the position in which the art was left, late in the eighteenth ntury, when the course of styles is generally garded as having run out; and we endeavoured give some general characteristics of the state art which succeeded, by way of preface to ore particular examination. The knowledge facts such as we refer to, is of course the first d the indispensable step to what there is so uch difference about, namely, the proper prehension of existing circumstances. But, believe that the recent history of architecture nnot be said to have been as yet written; and ose who notice the difficulty of getting at rictly reliable particulars of any of the events our own time, will see that to detail the urse of architecture, even in a period about hich our memory might give help, is not cessarily a straightforward business. Until thin the last five and twenty years, or thereouts, such records as, with painstaking, may turned to account, are few in number. It is t till as late as the year 1828, that we meet th anything like a regular statement of proess,—which was then first attempted, and with me success in limited space, in the "Comnion to the Almanack" of the Society for the ffusion of Useful Knowledge.

Some years afterwards, our sources are inased by the publication of the "Architectural agazine," edited by the late Mr. Loudon,—a rk which did service in its day. The existing rnals, though of later date, may be said to an over really a considerable measure of exrience. Whatever the channel to which the quirer is able to look, he will rise from the pour, instructed, if not with some sort of onishment.

It has been said, perhaps more than once, t if any man would sit down and plainly reint the facts of his own history, he would oduce one of the most entertaining, instruce, and valuable works in the English lanage. This is something like the chronicler t has been wanted for the current history of chitecture,—since changes that occur under e eyes are indeed momentous. On looking back, might then be able to discern that progress s being made at particular dates,—as, even der late disadvantages. For, we are not of ose who abandon all hope of the present, or o refuse to see anything in recent history of t, but what is profitless for the future. As ntrasted with several preceding periods, architure, during the latter part of the eighteenth ntury and the beginning of the nineteenth, s indeed at a low ebb. But it seems to us t the proper and philosophical aspect in ich to regard the epoch, would be as a link in chain of *progress*,—one as much as any better derstood period, essential to the working out that problem of ultimate perfect art to which artists' efforts are intended to be directed.

In endeavouring to fix some distinctive aracteristic,—after rejecting the ordinary e as asserted, namely, the prevalence merely contemporaneous styles,—we found that other period had practised so much the exrimental system,—that where any and every del is resorted to by the same architects, and t with the sense of the *proper* use of ancient odels, but with the desire of producing *facsimiles*; an object which was itself not attained. Even such set direction of style as we can discover—enabling us to group buildings into examples of prevailing fashions—did in no case endure sufficiently long, for the completion of the didactic process which in a blundering sort of way, over and over again, commenced. During the last seventy years, the world has been infected with a Greek fever, or a Gothic fever, by turns,—not to mention an occasional dalliance with the Egyptian, Roman, Romanesque, Roman Italian, Elizabethan, Swiss, and Indian, Saracenic, and Chinese styles, and the modern nondescripts called Castellated, and Rustic architecture, or *Cottage ornée*. No favoured style was made the instrument of real *design*; yet there was always just enough latent dissatisfaction with the existing condition, to allow of an excursion in any eccentric direction. For some years great attention was given to the Greek architectural details; yet to the same general period belongs the Pavilion at Brighton, where the highest art consisted in putting the forms of dragons into every imaginable position and contortion,—until, as we have heard it said, the senseless repetition drove one ornamentist mad. The Greek precedent was adopted to an extent, even beyond what public buildings would lead us to suppose,—and we must look to the porches and doorways of ordinary houses to gain an idea of its actual prevalence. The portico, or rather the prostyle, was, however, the acme of the modern Greek art: it was attached to any sort of front, and was itself shorn of the accessories—the depth of shadow, the internal columns, the steps, and the sculpture—most conducive to its original effect. As to the sculpture, it is certainly curious, that at a time when reproduction was exalted almost as a principle of so-called *art*, this very element should have been, so far as we know, wholly omitted from that Grecian Doric order, which some who are best informed on the subject do not hesitate to regard as a mere framework for sculpture in the architecture. And as a fashion, Grecian architecture was on the wane, when its secret appeared to be penetrated. To the fact that its real spirit has been at length detected, we must ascribe some of the chief effects in St. George's Hall, at Liverpool, the Fitzwilliam Museum, at Cambridge, and certain recent buildings.

We must, however, not omit to say, that although some of the chief branches of study, thirty or forty years ago, were not so far advanced amongst architects as they are at present, the difficulties in connection with opposite prevailing styles, were due to the public demand, in great measure, as they are now. The precedent of Sir Christopher Wren has not protected a living architect from being denounced as one who can "paganize" in the universities; and in the case of Wilkins, connected with the university of Cambridge, yet by inclination and learning drawn to the endeavour after Grecian art, it was scarcely possible, without abandoning practice altogether, to avoid that difficulty in the pursuit of different systems, on which many a reputation has been wrecked. Few there are, who, like the architect of the Houses of Parliament and the Treasury building, succeed in establishing a successful practice, in what are fields of study really hard to reconcile with each other. We are even constrained to think that a better result for art generally, would follow from taking example of the entire devotion to an object shown by Welby Pugin. However unsatisfactory it is to have to say that the present condition of ecclesiastical architecture is defective, and exceptional to the progressing art of the day—for which fact we believe we have to thank the public demand above referred to—doubtless some of the principles now understood, and capable of extensive development, are due to the recent study of Gothic architecture, and in no slight measure to the example and teaching of Pugin himself. But, for the mass of men—under the pains and penalties of an early education, hardly yet what it should be in such a profession—mediocrity will be the inevitable result of want of concentration. Enlist all the resources of study; but let the energy of *action* be directed towards one clear and undivided aim.

The experimental system to which we refer, as commenced at the end of the eighteenth century, was therefore a bad system from the manner in which it was conducted. There is at all events a *disposition* to work out the experiment of Gothic architecture; but during the period we are noticing, grown men and learned architects comported themselves like those students who are ever at work, but who present you only with a folio of all-unfinished sketches.

If ever there was a turning-point in the history of art in Europe, we believe it is at the present instant. Under discouraging circumstances, many recent works in England are such as our architects may be proud of. The element of danger we believe to be solely that difficulty which the professional architect meets with in getting proper reward of the ordinary kind. To no other profession could such an offer be made by a Government Commission, as that which has lately appeared in our advertising columns—where, by holding out offers of premiums to three sets of drawings, the endeavour is made to procure a hundred others without any compensation whatever. What it is to the interest of the country to possess, it is just that the country should pay for; and the offer of premiums, even if larger than are now generally offered, but which would be by no means excessive for really good sets of drawings, is quite beside the question,—so long as all drawings are held possession of—the competitors in general going unrewarded. If the unsuccessful drawings were returned, their authors would have—as the pernicious system of competitions runs—no cause of complaint. As it is, the profession should note that a new phase of the encroachment upon the just "hire" of which labour is "worthy," has commenced.

We say that there is danger to ART, in this position of the profession,—because the inadequate compensation for thought, in all that large class of works which most conduce to the elevation or the depression of public taste, namely, the class of small houses, prevents the requisite study upon them, in the few cases in which they are sought for by architects. It is not the fact, as we have heard it asserted by architects who had been fortunate themselves, that success in one kind of work compensates for inadequate return in another. The prizes and blanks of life are not so evenly distributed: it would be nearer the truth to say, that the duties of designing and superintending small houses are shirked by one class of architects, or are liable to be hurried off too hastily by others,—so that, be the case what it may, the existing art suffers. Thus, if the vantage-ground which general art is taking up is to be secured, the serious attention of the profession must be directed to that diffusion of information as to the nature of an architect's duties, and the fair return for them, so often insisted upon, but as yet unconsidered in the proper quarter. Without this, all the space that we give to the discussion of the other element in the condition of architecture, viz. precedents in its history, is so much waste of paper and type. Believing, however, that the question of remuneration, with subjects associated with it, will, ere long, force themselves upon the attention of the profession, if not of the public, we proceed with the inquiry from which these remarks have detained us, though we desired to make the latter, that it might be at once understood where the effort to elucidate the antece-

* See p. 109, *ante*.

dents of the present state of art can and cannot serve us.

Now, it is not difficult to understand how the experimental condition of our art came about. Towards the end of the eighteenth century there was a general change of taste in Europe, towards exceeding plainness in architecture. In France we have seen that the characteristic style of decoration was worked out. There, the change was the natural result of what itself came from the separation of architect and decorator, occasioned by misconception of the relation of structural and decorative architecture. We recognised the tendency in examples of exteriors in the time of Louis XV. having a character wholly opposite to the style of interior decoration then prevalent. For a time, a decided antique Roman element is to be noticed, as in the works of Soufflot, the architect of the Pantheon. Still Gondouin—like Burlington, and the architects of England—was a great admirer of the works which were then esteemed of chief excellence, in Italy—where plainness is the characteristic of the most important of the few late buildings. Palladio was the great model; and the slight amount of decoration which there is in many of his works, was an excuse for imitators who had not the requisite capacity for invention, or to detect the real cause of excellence in the works of the master.

Of men of this class, Quarenghi and Rusca became largely employed at St. Petersburgh. Both architects have published their executed works and many of their designs; but all are marked by the affectation of simplicity. The chief designs in Rusca's book are for barracks on an immense scale, and this gives to the works a certain importance beyond what can be ascribed to the architect. The mention of Rusca brings us up to a very recent period; but the inanimate character of Palladian imitation is remarkable during a long interval. Now, whilst the idea of the purity of the architecture of the great Italian master was prevalent in Europe, knowledge of the Greek models began to justify what seemed to be the attainment of great effect by very simple means. For, as we said, although the Greek sculptures had been delineated, it does not appear that sufficient importance was then given to the sculptured element in the architecture. The Greek style in England, however, did not obtain great favour for some years. Greater attention was given to it in France.

Besides their use of the Doric order, the works of Antoine were marked by that form of rustication in which the perpendicular channellings are omitted. Architecture had stood in need of something new; and every trifling novelty, or revived detail, was sure to be rendered nauseous in passing through the hands of those who were incapable of an invention of their own. Thus, this kind of rustication had its day, and its like discontinuance. It had been used by Inigo Jones in his beautiful front of old Somerset House; it was used in the India-House, and, to a great extent, in the works of Sir John Soane.

The Greek style, however, did not continue in France to any very late date. In England, the Grecian orders, which had been depreciated by Sir William Chambers, in 1759,—though the work of Stuart and Revett appeared within a few years of the same date, did not meet with immediate favour. The general architecture of the country seems to have been gleaned from the books of Palladio, or in great part from works of less repute. The style of Sir Robert Taylor and Sir William Chambers was formed from elaborate study of Italian models, but is not the slavish reproduction of the style of one particular architect.

The long-continued sameness of manner, however, perpetuated two antagonistic principles in architecture, each to be explained from dissatisfaction with things as they were. Those who were ready to escape the labour of invention,—for which they felt incompetent,—were glad to justify poverty of effect by reference to sounding authorities; others determined at least to avoid that error, and therefore sought for precedents from any new sources. Consequently, belonging to the same general date as the emasculated Palladian of Italy, and, indeed, Europe, we have the budding Greek revival in Germany—expressed in the Brandenburgh-gate, at Berlin, by Langhans, copied from the Propylea, at Athens, and commenced in 1789—the exotic Greek architecture of France, and in England works of a superior character of Italian, as well as the growth of a taste for what was classical, and lastly the peculiar style of the Adams. To the architects last named, it has been the habit with many writers to allow no one good quality. So far as having mistaken mere opposition of system for good art, and for having under the desire for novelty sought out a degenerate school, their practice should not be imitated. In the details which they reproduced, novelty was not so much the characteristic, as was the obvious impotence of the effort of the following in the track of an originally noble school. The details of the Palace of Diocletian, should be classed with such styles as the "debased" Gothic architecture, where we are only reminded of how excellent are the details which are not actually before us, —and such sense of dissatisfaction is always fatal to an impression on the beholder. But after full importance has been given to this, there is much in the work of Robert Adam that deserves to be recorded with approbation. The introduction of medallions, enriched with sculpture in low relief or subjects painted, and the general recognition of ornamental and decorative art, evinced not only in his buildings, but in a profusion of designs for articles of manufacture, seem to us to show a mind, at all events, in advance of the architectural taste of many of his contemporaries, as of the pseudo-classical school, which succeeded. His industry was marvellous. At the Soane Museum, we recollect one or more large cupboards, or recesses, filled with folios of his sketches, including almost every imaginable object. We are not aware that any living architect has been so much appealed to for designs for articles of decoration and household use. At the same time there are numerous ideas of iconographic distribution,—in which, with reference to scenic effect, it is admitted by Mr. Gwilt that he excelled. He seems to have had the habit of preserving every scrap of paper that his pencil touched: the result is, that we get much that may be useless; still the habit is one to be imitated. There are houses in the Adelphi, of which the ceilings are well deserving of examination; and if they are not faultless in details, show great superiority over the designs during many years later, which were simply an unbroken surface of plaster, or treated with a centre "flower." Indeed, the flat style of relieved ornament is quite as suitable for the enrichment of ceilings, as the heavy beams and coffers, and the ponderous fruit and flowers introduced earlier. Even in the terrace of the Adelphi, which has been at one time unnecessarily exalted, and at another contemned, we see much that explains, if it does not justify, the praise which may be read of it. In the view from the river, the substructure is now nearly concealed by a number of low buildings,—with chimneys smoking for the especial advantage of the residents in the terrace. Formerly, however, when railway viaducts were unknown, the range of arches—with their spandrils enriched with large *paterœ*, of good design, but now injured and broken—gained for the place, attention of which it was not wholly unworthy. The vaults generally, as most of our readers know, extend under the houses and streets of the whole district. They are not undeserving of praise, as structural works produced when such matters did not often engage an architect's attention; but they of course absorbed an enormous amount of money, and must have been a serious mistake as a speculation. Such merits as there are in the superstructure, contributing to the general effect, are limited to the mere grouping of the buildings in blocks, and to such details of ornament (for example, about some of the doorways) as we have referred to. The general treatment of the orders there, as in the more pretentious front of the Society of Arts, in John-street, is feeble in the extreme. Nevertheless, evidence may be found in favour of our view of the merits of the school as to some particulars, on comparison of the original ironwork of the terrace-railing, part of which is remaining, with the cast spear-heads placed at a more recent date along the principal portion of the line. The favourite anthemions of the school, used in the balconies and lamp-standards, will suggest similar comparisons. In Bolton House, Russell-square, there were, formerly, and perhaps are now, as there are no doubt in other houses, several rooms with the doors and other wood-work decorated with medallions on the panels—enclosing figure subjects. The effect appeared very good, and highly suggestive as an improvement upon modes of decoration, such as are now general. Whether these particular designs were by any of the Adams, we do not happen to know; but they are quite in accordance with the style referred to, which prevailed to a wide extent in architecture and ornamental art. We may also add, that at Drapers' Hall there is a staircase with a highly effective lantern and ceiling, much enriched with ornament, and which is probably by one of the Adams. It deserves to be better known. Robert Adam died at the age of ninety-four, in the year 1792. Sir Joshua Reynolds, and Smeaton, the architect of the Eddystone Lighthouse, died in the same year. This was about ten years after Soufflot and Gabriel had died, in France, and four years after Sir Robert Taylor and "Athenian Stuart," in England.

The French Revolution had commenced with the capture of the Bastile, in 1789. In 1793 Louis XVI. was executed, and the war between France and England commenced. Sir W. Chambers lived to the year 1796. We therefore have the means of forming some opinion as to the comparative influences which were in operation. The general classical tendency—though not necessarily with the proper accompaniment of taste, is shown in the sculpture of this period, of which a large quantity was shortly executed, in commemoration of the heroes of the war, by such men as Nollekens, Banks, and Bacon. Attention was given about this time both to Egyptian, and classical antiquities. The interest of the problem of the unravelling of hieroglyphics drew to the former much notice. The French carried with them to Egypt a corps of *savans*, as well as an army of soldiers,—with the attention to such opportunities which all the governments of France have shown, but which our own country has never imitated. The great monument of research, the "Description de l'Egypte," was the result. Some three years earlier, or in 1796, the chief works of art from Rome, had been deposited in the Louvre. Though Antoine was living till 1801, the most important school of architecture at the end of the century was that of the architects Percier and Fontaine, who elaborated a new version of pseudo-classical ornament, and whose works at the Louvre have very great merit.

This direction in general taste,—aided in England by the study of Grecian architecture, through the labours of Stuart, which had been given to the world about the year 1752—received a new *impetus* from those occurrences which had overturned the monarchy of France, and now influenced every country in Europe. The effect upon art was immediate: classical models, which had gained great importance from the works of David, were now the only source of inspiration, and an imitation of Roman customs and titles was general. Bonaparte became emperor in 1804. To the influence of the French consulate and empire upon art, and the contemporary period in England, however, we may give attention hereafter.

A FEW REMARKS ON ITALIAN ARCHITECTURE,

WITH A VIEW TO AN ADVANCE.

IT is not to be expected that the observations of a mere amateur like myself will convey any fresh information to practical and professional architects; yet if I honestly record my own impressions, and do not merely retail the opinions of others, I may succeed in suggesting a new and perhaps not unprofitable train of ideas even to the most experienced.

I have no doubt that much which has appeared to me new and remarkable is, to many, familiar and common-place; and that the views which I have entertained, and which I would lay before you, are not presented to notice for the first time; nor need I say that I avail myself freely

f the works of other writers upon architecture; hat I have been led by them to observations I should probably never have made of myself, and of course must be indebted to them for rudimentary principles, facts, data, historical evidences, &c. without end: I shall draw my conclusions myself, and not take them ready-made from any authority at hand.

When I express a doubt whether the present attempt to revive the mediæval styles be favourable to the promotion of architectural taste, or to the advancement of architectural art, I trust I shall not be accused of insensibility to the wonderful beauty of Gothic architecture, nor yet of indifference to the merit of a considerable number of modern buildings of that style, some of which I have had an opportunity of studying lately, and cannot but admit the excellence of their design and execution. In some, the architect has not only traced the details, but caught much of the spirit and character of the age from whence he has borrowed his style. At the same time, I cannot look at such works in any other light than as spirited and successful imitations. Their excellence appears to be just proportioned to the closeness of the imitation. I am occasionally told that the advocates of revived Gothic look to, and aim at, a fuller development of the system. If it be so, and if they have a fair prospect of success, my argument falls to the ground; but I do not see any symptoms of this development, any aiming at a higher standard than has already been attained. And under such circumstances it cannot, as a national style, possess that vigour and energy which are the very essence of true Gothic. I am hardly prepared to admit that the Gothic style was the natural and inevitable result of the arcuated system. It seems more correct to say that it was struck out of it by the genius of a peculiar race, who in other respects are remarkable for their influence on the destinies and condition of the greater part of Europe. But for the Normans, the use of the arch, even of the pointed arch, would never have given birth to such productions as Amiens, Strasburg, and Salisbury.

I need not say that an arch may have two kinds of abutment—one, a solid, immoveable mass, which would stand independently, though the arch were taken away,—the other, an arch or portion of an arch, pressing against that to be sustained, and if the latter were removed, liable to fall in. This constitutes the grand distinction between the Gothic and Roman. For though but a small proportion of Gothic buttresses are actually flying buttresses, that would fall in if the arch strengthened by them were removed, still all the buttresses have apparently that tendency, and are made to indicate an active pressure, while the Roman abutment is a solid vertical mass (each pier is itself an abutment); and to give a greater appearance of stability, an engaged column or pilaster is attached to the pier, and an entablature carried along the top of the order; broken or not by projections corresponding with the column. Undoubtedly this is an incongruity in composition, but it may be less severely condemned on account of the expression it gives of repose and tranquillity; an expression, you will observe, proper to architecture itself, independently of the spirit and character of the age or people. And, although it is most strongly marked in ancient work, it is by no means lost in the lighter compositions of the revival. The Gothic expression is that of movement, energy, conflict; elements of grandeur, so long as they represent a corresponding spirit of the age, and giving amazing life and force to an architecture that sprang up in times characterised not only by earnestness and strength of purpose, but also by a considerable degree of restlessness, turbulence, and violence. The attempt to adapt it to an age of advanced civilization and refinement may possibly result in burlesque, and almost certainly will result in tameness and insipidity. A style suggesting repose (and this also is an element of grandeur) cannot be out of place at any time, or with any people, because it belongs essentially to architecture itself: a style suggesting movement and conflict (which are not the natural characteristics of architecture in the abstract) must be out of place unless it conveys a true and lively expression of the spirit in which it originates. And this appears to me the principal reason why modern Gothic buildings fail to command that amount of interest which the intrinsic beauty of the style, and, in many cases, the excellence of the work itself, would seem calculated to excite.

Though I have remarked that something may be said in justification of one of the most manifest inconsistencies of the Italian classical style, I by no means assert that we should not get rid of it if we can; and I am farther still from defending the debasements which undoubtedly have tended to bring this style into contempt. That much poverty of invention, meagreness of design, ill conceived and unmeaning ornament, has marked some of its stages, it is impossible to deny. In a hasty excursion that I lately made through some parts of Italy, it struck me that works of the revived Classical of the fifteenth century were of great interest; those of the sixteenth mostly worth study; those of the seventeenth of comparatively little value; while in the eighteenth a decided improvement took place, though not without considerable coldness and formality of character. The principal front of the Lateran will explain what I mean. In France and Germany we shall hardly find buildings of the same purity with those of Italy belonging to the sixteenth century; but in those countries, as in England, the lingering of the Gothic element gives a degree of picturesqueness to structures very faulty in this design. Of some of the earlier specimens in Italy I will speak presently.

If we must necessarily consider the Pointed arch as a refinement and improvement upon the round arch, then it would be a barbarism to go back to the latter. But I do not think we are at all bound to admit this. The Pointed arch may in some positions be more appropriate; but it is by no means beyond dispute the better form of the two, in the abstract, either as regards beauty or strength. The variety which the Pointed arch admits has been much insisted upon. But the variety of angles made by the points of the arches is, I think, the last thing to which we should attribute the beauty of a Gothic cathedral. And though in a recessed Pointed doorway every order has a different form, still I think many will prefer the majestic sweep of the round arch, of many orders (all of the same form), as it appears at Tewkesbury (Tutbury). It seems not very easy to prove that the pointed arch is invariably stronger than the round. Certainly, in engineering works, the number of pointed bears no proportion to the number of round arches. There are many beautiful Mediæval bridges which present the latter form; —that of Kirby Lonsdale, for instance; and on the Continent, the fine bridge of Pont St. Esprit, over the Rhone, and the ruined bridge at Avignon. To find out the strongest form of an arch must be an extremely difficult problem; its conditions will vary, according to the supposed action of the weight supported; that is, whether we consider it as a solid mass, or as one acting like a fluid perpendicularly to the curve of the arch, or as a number of detached columns bearing vertically upon every point. I suppose the real action is a combination of all three; and I cannot see how mathematical calculation can give any decided practical rule. Probably, in most cases, neither the pointed arch, nor the unbroken circular arc, is really the strongest, but something rather of the form of the parabola, or the catenary, which the curve most commonly used for tunnels appears to resemble. I can conceive the pointed arch to be the strongest only where there is a decided weight upon the vertex, such as a pinnacle, and I should even doubt whether a gable required in the arch below more than a maxim of curvature not amounting to a curvature greater than any that can be assigned, or, in other words, a finite angle.

But experience teaches us that there are few cases in which we may not use the round or the pointed arch at pleasure, either being amply sufficient for the purpose required. The construction of several of our old market-houses (that of Ross may be remembered, as an example), shows that arcades of round arches supporting a considerable weight, can be used with very little abutment. If, then, the pointed arch is not a more pleasing form in the abstract than the round arch, not more desirable as a general rule, on the ground of strength, there is no reason why its introduction, at whatever period, should drive the round arch out of the field, or render its adoption obsolete and barbarous. The pointed arch was necessary for the perfection of a particular style, namely, the Gothic, but is it impossible that a perfect round-arched style should be developed, possessing quite as high architectural qualities, and equally capable of expressing the genius and character of a people? There seems to me to be greater room for the further development of a round-arched style, than there is at present for that of a pointed style; for no round-arched style has been hitherto carried out with that purity or to that perfection which almost every remnant of it suggests as attainable. The Roman style admitted the trabeal element much too freely. The Basilican, though purer, and not unimpressive, is somewhat meagre, and depends more on pictorial than architectural ornament. The Byzantine promises well, and would form an admirable ground-work. The Pisan, with its multitude of small arcades, betrays a want of architectural invention (I do not say a want of invention in carving and coloured decorations, but I wish to speak of architecture as much as possible independently of other arts). The Lombard is grand but rude. The French and German Romanesque have much that is excellent, and in the twelfth century showed a considerable degree of refinement. The Norman, on either side of the Channel, is a noble and powerful style, but has so much of the Gothic element that its progress could only lead to the Gothic itself. A great deal already exists that might be available towards such a style, supposing it to be a desideratum; and if we followed it up with energy, it is not impossible that some hitherto unknown element, necessary to give unity, individuality, and decided character, may yet be discovered. I believe I am now and then accused of advocating some unaccountable jumble of styles, made up of Romanesque, debased Gothic, Cinque-cento, and Roman, and revived Italian of every class. Now, I would answer, that there is a great difference between obtaining suggestions from these, or fifty others, and mixing up their characteristics; for what I want to draw from these suggestions, are true and essential architectural principles, and not the mannerisms of style. I do not want the result to remind you of Romanesque, or Gothic, or Italian, any further than by possessing abstract architectural merits belonging to each or all. And the careful study of them will enable us to distinguish between sound principles and superficial distinction.

I will now call attention to a few of the earlier buildings of the revival which have struck me. The cathedral of Rimini, the latest part of which belongs to the fifteenth century, is well known by Mr. Gally Knight's work on the ancient architecture of Italy. The church is Gothic, but attached to its outer wall is an arcade of round classical arches or square piers. The front, which is unfinished, suggests a very grand design. In this, the ornamental system of the engaged column and entablature is used, but the arcade round the rest of the church is without it, and exhibits in fact, the round arch in its purity. I do not think I am acquainted with a grander specimen of the revived classical, as far as it goes; but these arches were built for a particular purpose, namely, to form a canopy for tombs ranged along a rich basement, and the structure would not sufficiently help an architect who is designing a cathedral. * *

Palladio's churches in Venice have good outlines, but his fronts are unsatisfactory, and in the interior he is too fond of the engaged column. His general proportions, however, are very pleasing.

A careful study of the early works of the revival is calculated to enable us to clear the Italian style of all that is really base and meagre, and render it a style in which a great architect may express his thoughts, without the fear of being ashamed of, or dissatisfied with, his work. But it may prove more difficult to clear it of those elements which, whatever reasons may be produced to justify their introduction, cannot but be felt to be incongruous, and yet to command such means of enrichment

as are necessary to ensure the magnificence of which architecture ought always to be capable.

A Gothic structure may be rich and magnificent by the mere help of mouldings, without the introduction of any sculpture, even so much as a wreath of conventional foliage. Some of our Cistercian abbeys illustrate this. And the Temple of Pæstum, now denuded of all adventitious ornament, and probably never enriched with much sculpture, proves that Greek architecture is in itself, even without the aid of any other art, sufficient for works of the highest grandeur of effect. Nor is the Roman style, whether ancient or revived, dependent upon sculpture or painting for its magnificence and beauty; and I have purposely selected examples which owe their excellence to neither.

If we attempt any new style we must take care that it be equally independent, though at the same time equally able to avail itself of the higher efforts of the sister arts. So that a mere surface decoration of sculpture does not solve the problem. And the use of unmeaning lines or mouldings to fill up blank spaces, would be a sad falling off from the nervous and powerfully expressive Gothic.

It strikes me that the clear, delicate, line of a semicircular arch requires a rectangular edge to mark it out properly, and consequently that it never appears to greater advantage than in plain square orders. A large torus confuses the outline, nor does a chamfer preserve it with sufficient distinctness. A sharp edge, or at the most a small bead, seems to be the proper finish.

If the soffit is full of mouldings it takes the nature of Gothic, and any other ornament that varies the surface, such as the octagonal panels in a Roman vault, is objectional as interfering with the strength and solidity of the voussoirs, which require that the inner surface of arch, vault, or dome, be unbroken.

As the arch is a constructive feature, invented for the purpose of bridging over spaces beyond the reach of a stone lintel, or where such could not be conveniently obtained or applied, I might suggest that it should not be used on a minute scale, where a piece of stone, or even a brick, is sufficient to serve the purpose; nor am I certain that the use of small ornamental arcades should be advocated. There is a difference between making the accessory details harmonise with the construction, and making them repeat it. I would suggest that the use of the shaft or column be abandoned, except where it can be perfectly insulated, and of something like classical form and proportion. Vertical lines may be obtained by pilasters, and these can be enriched by fluting, as in the Cathedral of Autun, a building which, though its pier arches are pointed, furnishes many admirable hints for the formation of a round-arched style.

If the entablature be recognised, it ought, I think, to be somewhat modified, and confined to two members only, under the spring of a barrel vault: the architrave seems unnecessary, except to connect a series of columns.

There is also a test which the composition ought to bear, which I shall call the test of reduplication, and endeavour to explain it. Set a spire upon a tower, and put a pinnacle upon each angle, also terminating with a spire. This may in its turn be surrounded with similar pinnacles, and so on without limit. Your work might soon become too minute to be carried on, but still it would involve no absurdity or impropriety: the original design bears the test of reduplication: we cannot object to it as either involving or suggesting any architectural anomaly.

So again, upon a mass pierced with one arch, place one pierced with two similar arches, their imposts bearing the same ratio to the void spaces as in the composition below. On this again place a series of four arches; above that of eight, and so on. You may, as before, soon stop from the minuteness of your work; but carry on your structure as you will, it involves no architectural anomaly; and a design suggesting such repetition or reduplication is in this respect not faulty. But now take an arch with square imposts: pierce these imposts with arches; the imposts of these also with others, and so on; then we find that we are constantly lightening and weakening the substructure of a heavy mass; and the work that suggests this reduplication does suggest an architectural anomaly, and is therefore faulty.

The arch of Titus or Trajan, with its unpierced imposts, suggests no such reduplication, and consequently is so far correct; but where the impost (stripped of its columnar features) is pierced, the reduplication is commenced; and unless there are points of difference sufficient to turn the mind from the idea that it may possibly be continued, I think the arrangement is faulty. Perhaps the pierced piers of Perigeux are almost open to this objection, unless there be marked with sufficient clearness the difference between the soffit of an arch and the surface of a vaulted roof. In the model of St. Paul's, the piers are not pierced, but merely hollowed out into a niche; a distinction quite sufficient to avoid the suggestion of any erroneous principle.

It will be said that I am only raising difficulties to the formation of the style I would recommend. Perhaps it is so. It is the province of genius to surmount difficulties. An art beset by no difficulties is no art at all; or at least not one worth attaining. Poonah-painting has fallen into disuse. Potichomanie will, if I am a true prophet, scarcely outlast the present century. And such architecture as consists in mere imitation, whether its model be Gothic or classic, may not be destined to boast a much longer period of endurance. It is not from a mere desire of novelty that I am anxious to see a new style attempted. The Gothic, admirable as it is, appears to be so essentially connected with the spirit and character of the age which produced it, and to owe so much of its value and interest to the expression of that spirit, that its general revival in a different age, notwithstanding its successful adoption by individuals, seems to be morally impossible.

The classical, though not open to the same objection, and having many excellencies, still contains certain essential defects and incongruities, which prevent our remaining perfectly satisfied with it. A mere recurrence to English or French Romanesque, or a reproduction of German or Lombardic forms, would be an outrage to art herself, who demands constant progress, even if it be towards decline, and if she collects the elements of an earlier period, still moulds them into something new and striking.

And therefore I believe that a path is still open to inventive genius; and, however I may have failed in finding it out, I cannot be wrong in endeavouring to urge others to persevere in the search.

J. L. PETIT.

ON CHRISTIAN ART.

MR. SCHARF'S *fourth* lecture on "Christian Art" opened with the Campo Santo at Pisa, the celebrated burial-ground, enclosed within four covered ambulatories like the cloisters of our own cathedrals. The architecture was designed by Giovanni Pisano, and completed in 1283. The beautiful traceried windows, however, belong to a subsequent period. The arrangement of the pictures upon the wall, and the subject of the earlier ones by Francesco da Volterra, Pietro di Orvieto, and Buffalmacco, were explained in order. The large painting of "The Chapter-house of S. Maria Novella," at Florence, represented the church militant, with a group of Dominicans preaching in the lower part of the picture, accompanied by a pack of dogs tearing wolves to pieces; the former being spotted black and white, in allusion to the dress of the order who were *Domini canes*, the dogs of God. The same picture contained a representation of the Duomo of Florence, according to the design of the original architect, Arnolfo da Lapo, son of the architect of S. Francesco at Assisi, by which it will be seen that he had intended a dome, such as Brunelleschi ultimately executed. Memmi, more properly Simone Martino, of Siena, was a contemporary of Giotto, and mentioned by Dante rather as his rival than a pupil. A certain Duccio of Siena painted a large altar-piece for the cathedral of his native city, which, like the picture of Cimabue, was conveyed to the church in grand procession. It represents in numerous compartments the Passion of our Lord. The lecturer showed that one of the subjects, the three Maries coming to the sepulchre, and seeing the angel after the resurrection, which had obtained especial praise for grace and composition, was in fact a transcript of the earlier Byzantine treatment. It frequently occurs in the old Greek MSS. was wrought in mosaic upon the walls of Monreale, and adopted by Cimabue before Duccio, who, with a greater refinement of feeling, in which possibly he only returned nearer to the original source, made it his own.

Certain subjects were referred to as almost always exhibiting the period at which they were painted. Among these, especially, the interior of the chamber in the Annunciation, the costume of the soldiers and women in "The Massacre of the Innocents," and that of "The Sleeping Guards around the Tomb in the Resurrection," serve to mark the date of execution. But Duccio lived in the past, and notwithstanding his improved manipulation, chose to adopt the old Byzantine conventionalities, with the exception of his architecture, where the round arch and pointed appear in the same picture.

Meanwhile the Early Pointed style of architecture had grown into richness and beauty during the reign of Edward I.; and the yet remaining crosses to the memory of his beloved Queen Eleanor sufficiently attest this. She died in 1290. An exquisite large drawing by Flaxman fully exhibited the refinement our sculptors had attained at this period, and a beautiful bronze statue, executed by one Torrell, may be still seen on her tomb in Westminster Abbey. The date of this work is known by the payment to be 1292, in the same year that the tribune mosaics were completed by Jacopo Turriti, in S. Giovanni Laterano and Sta. Maria Maggiore at Rome, and four years before Giotto was invited to Rome, when only twenty years of age. At this same date Roger Bacon was buried at Oxford.

Edward I. began to rebuild St. Stephen's Chapel, and employed many artists upon the decoration of the Painted Chamber in his palace. After repeated injury from fire, the Chapel of St. Stephen was completed with great magnificence by Edward III. The date of its endowment was 1348. The hero of Cressy and his valiant son were represented, with the other members of the royal family, kneeling on each side of the altar; and these paintings existed until the great fire of 1834, which destroyed the House of Commons, originally St. Stephen's Chapel, and the adjacent buildings. About the year 1800 they had been most accurately copied in colours and gold, for the Society of Antiquaries, who permitted Mr. Scharf to exhibit these beautiful transcripts of our former magnificence in mural decoration. As contemporary works with the school of Giotto and Simone Memmi, they were to be regarded with no small interest, and recently they had acquired an additional importance as the only authentic records besides the documents referring to the payment for them.

During the wars of Edward III. in France, the Papal court was resident at Avignon, and Rome, being deserted by the head of the church, fell into the power of various factions of the old nobility, who, in their perpetual feuds with each other, contributed to lay waste no small part of the city. Contemporary with the battle of Cressy, Niccolo Rienzi was exciting his fellow Romans to return to their ancient constitution, and eventually had himself nominated tribune of the people. His name deserves mention in connection with art, as at a time when no public works were in progress, he, knowing the effect it would produce upon the populace, employed pictorial representations, which he exhibited to the people and explained their significance. Fortunately, a minute record of these allegorical devices exists, and we may trace in them no small resemblance to the Navicella of Giotto. Everything was symbolical, but each figure appears to have possessed a clear and strong meaning: in accordance with the old plan, the names of the personages, and short speeches they were supposed to utter, were written against them. The central tower of Lincoln Cathedral, when compared with other English towers of the period, has more affinity in composition and proportion to the campanile designed by Giotto at Florence than any other

xisting in this country: it certainly belongs to the same period. The magnificent bronze gates of the Baptistery at Florence were completed by Andrea Pisano, in 1339, from designs provided by Giotto. The lecture concluded with notes upon the illustrious men of Italy, and the use made by Boccaccio of the great plague of Florence, in 1348, as a vehicle for his "Decameron."

LECTURE V.

The scene was laid in the Dominican convent of St. Marco, at Florence, which is especially rich in the paintings of a monk of their order, known as Il Beato Fra Angelico da Fiesole. His real name was Guido di Mugello. The epithets Angelico and Il Beato were given him for his heavenly disposition; and he himself adopted the name of Giovanni, with reference to St. John, the apostle of love. Fiesole was the place where he first assumed the monastic vow. His conceptions are essentially pure, and teeming with enthusiastic devotion; every picture of his might be termed a visible prayer. He never could be persuaded to alter anything he had already painted; what he had done was regarded by him as a direct inspiration from Heaven.

The colours of his pictures are remarkably bright and cheerful, enriched freely with gilding, but not gaudy withal. For even where pure colour is shaded with pure colour, its position, with regard to the rest, is such as to preserve a balance and ensure a harmony. Some of his most beautiful works are at Florence. One especially fine work of his—a "Coronation of the Virgin, surrounded by the Angelic Host," now in the Louvre,* is especially charming.

Mr. Rogers, Mr. Fuller Maitland, and Lord Ward, possess, undoubtedly, fine specimens of this rare master, all of which are in excellent preservation. Fiesole was weak and timid in drawing, and when called upon to represent exertion, as in those making resistance to the devils seizing their prey, in pictures of the "Last Judgment," he failed entirely. Nothing, however, could equal the heavenly enjoyment of the blessed approaching Paradise, and the celestial dance on the asphodel meadow.

The Arundel Society again exhibited a beautiful series of original drawings, that they had caused to be taken from Fiesole's paintings, in the chapel of San Lorenzo, which Pope Nicholas V. had founded in the Vatican. Fiesole was ten years old in 1399, when Richard II. was deposed, and he lived three years beyond the capture of Constantinople by the Turks, in 1453. The costume of his pictures shows the period of our King Henry VI.

Further decorations had been added to the walls of the Campo Santo, at Pisa, and the most important among them were two pictures by Andrea Orcagna, a pupil of Andrea Pisano, representing the Triumph of Death and the Last Judgment and Hell. A compartment which was intended to have been filled with the subject of Paradise was occupied by a pictorial history, representing the Lives of the Hermits in the Desert, their occupations, intercourse, and temptation. This picture was by Pietro Laurati. At this period the business of the painter was to write upon the wall as clearly as if words were used, and in most cases these designs were intelligible even to the meanest capacities. Where difficulties occurred, and people could not read the names, it was the business of the priests to explain them.

Orcagna was also distinguished as a sculptor and architect. He executed the celebrated tabernacle in Orsanmichele, at Florence. It was designed by a company, in gratitude to the Virgin for having terminated the great plague of 1348. The tabernacle was finished in 1359.

Orcagna also designed the beautiful Loggia dei Lanzi in the Piazza Ducale, but did not live to see it finished: he died about 1375, the same year as Boccaccio, both, somewhat singularly, having commemorated the Florentine plague.

The two great sculptors of the age were Ghiberti and Donatello: Ghiberti, three years older than his rival, was born in 1380; Donatello died in 1466.

Ghiberti executed the famous bronze doors for the Baptistery of Pisa, to correspond in size with those already wrought by Andrea Pisano. They possess many of the excellencies of this refined period, but display also serious violations of the fundamental laws of sculpture. Michelangelo's praise must, however, silence all severe criticism, since he pronounced them worthy to be the gates of Paradise. Both sculptors commenced with the practice of painting. Donatello was a pupil of Lorenzo Bicci. In his sculpture there was a pictorial wildness and agitation corresponding to the ancient Etruscan style observable on ancient urns and bassi-relievi, especially at Pisa and Volterra, whilst Ghiberti was delicate, refined, and elaborate; delighting in alto-relievo where the front figures in his subject were completely detached from the background. His style might be compared to that of Greece, after the Macedonian influence. Brunelleschi, also a sculptor, and competitor with Donatello, distinguished himself in architecture. He measured and studied all the ancient examples then to be seen in Rome. He constructed the cupola of the Duomo of Florence, which had been designed by Lapo, as mentioned in the notice of Memmi's picture of the Church Militant. Brunelleschi, however, heightened the dome by introducing an intervening member or drum, which bestowed greater importance upon the central portion. This illustrious architect died in 1444.

The Perpendicular style of architecture in our country is generally dated from 1377; the same year that Brunelleschi was born. A restless desire for change, and the increasing study of classic architecture, seem to have contributed chiefly to its rectangular characteristics. The east end of Gloucester cathedral is a magnificent specimen of this peculiarity. A series of copies of monumental brasses were exhibited, taken by a new process by Mr. Richardson, of Greenwich, and Dr. Alfred Taylor, which displayed a class of art extensively employed in England from the middle of the fourteenth century. These brass slabs being engraved, and filled with black paint and mastic, were in fact *niellos* on a large scale, the very principle and process that led to the discovery of copper-plate printing.

The pictorial art of England was exhibited in copies of the Jerusalem-chamber portrait of Richard II. paintings from his monument in Westminster Abbey, and also from that of the canopy of the Black Prince at Canterbury, together with selections from the metrical romance of Richard's Deposition, in the British Museum collection of MSS.

LECTURE VI.

The scene was laid in the Brancacci chapel of the Carmine church, at Florence. A large view exhibited the position of the various frescoes by Masolino da Panicale, Masaccio, and Filippino Lippi. This chapel fortunately escaped destruction by the conflagration of 1771, when the rest of the church and a valuable series of paintings by Giotto were totally burnt. The lecturer proceeded to explain the causes that had led to the improvement in art observable in these works, and of Masaccio in particular.

Masolino had studied under Ghiberti and Starnina; he lived only to complete two of the frescoes, one on each side of the altar. Masaccio acquired perspective and modelling from Brunelleschi; he painted a chapel in S. Clemente, at Rome, and died just before his master, in 1443, twelve years before Fiesole and Ghiberti. He left many frescoes incomplete, which were afterwards supplied by Filippino Lippi, the son of Filippo Lippi, who was a talented painter; but although a monk, of a most scandalous character.

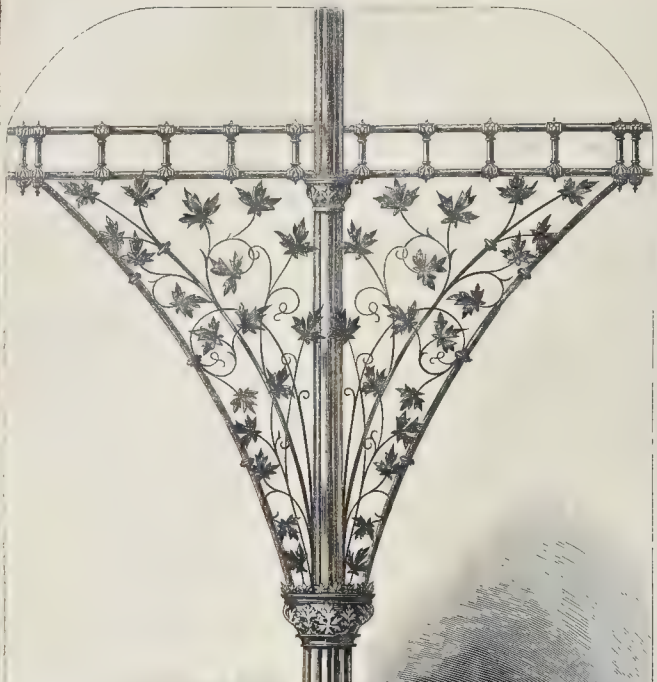
These frescoes all display breadth of manner, freedom of handling, a perfect knowledge of form, individuality in the heads, combined with a remarkable richness of colouring. The old form of the nimbus, or glory round the head of holy personages, is no longer a flat gold disc, but a circular plate, drawn in perspective, resting on the head. The draperies are full, with large folds, and in the works of Masolino especially, encumbering the figures too much. These paintings were studied by Raffaelle and Michelangelo with great advantage, and certain figures are still to be seen in the works of the former, which have been directly adopted from the walls of the Carmine. St. Paul preaching, in the famous cartoon at Hampton Court, is taken from a figure of St. Paul by Filippino. The Adam and Eve expelled from Paradise, that had been taken by Masaccio from Cimabue, at Assisi, was introduced by Raffaelle, with considerable improvements, into his series of cupola decorations, for the Loggie of the Vatican.

Mr. Scharf next explained a series of paintings by Benozzo Gozzoli, covering one side of the wall of the Campo Santo, at Pisa. They illustrated the history of Noah and Moses, David and Solomon. Gozzoli was a pupil of Angelico da Fiesole, and was employed to complete several of his works. Paolo Uccello, Gentile Fabriano, the Venetian school, and the works of the brothers Van Eyck, were mentioned, and specimens of their styles exhibited. The lecture terminated with a series of notes upon the various modes in which the crucifixion had been represented from the earliest Syriac example at Florence, through the periods of symbolism, to the Greek custom of representing the Saviour as emaciated and in agony. In the fourteenth century the feet were transfixed with one nail only; and this system, in which three nails altogether were used instead of four, became universal in the Italian schools of art. The Saviour at first was represented alive on the cross without any appearance of suffering, but at a late time the crown of thorns was introduced with the blood streaming from the brow in a most revolting manner. The body was made to *hang* from the upper nails, and swayed violently sideways. Fiesole, who is one of the first to introduce the crown of thorns, makes it encircling the head without touching it. In his beautiful deposition, now in the gallery of the Belle Arte at Florence, the crown is the subject of a most pathetic appeal by one of a group, who are contemplating some of the instruments of the passion. The earliest well-authenticated picture by Raffaelle represents the Crucifixion: it was painted in 1500, is inscribed with his name, and is the only instance of his representing that subject. The picture is now in the possession of Lord Ward, and displays all the characteristics of the artist's master, Pietro Perugino.

* A very beautiful print in coloured lithography has just been published in Paris. It conveys very successfully the richness and cheerful tone of the original, which is painted in tempera, or distemper colours. The brightness of the gilding also is fully rendered.

COMPETITIONS.

Wolverhampton.—New Town-hall Front. — The design of Mr. J. R. Veall, architect, of this town, has been selected by the town council. It is intended to execute the façade in stone, at an expense not exceeding 891*l.*



New Market-hall at Warrington.—The town council of Warrington being about to erect a new market-hall and covered shed, on the site of the present market-place and manor-house, invited architects to send in plans and designs, offering a premium of 25*l.* for the best design. Eleven architects responded. The design selected, according to the local papers, is by Mr James Stevens, architect, of Macclesfield and Manchester. The estimated cost is about 5,000*l.*

St John's Cemetery, Newcastle-on-Tyne.—We are asked to mention that the competitor to whom the second premium was awarded is Mr. R. J. Johnson, not Johnstone.

Dudley Workhouse.—Endeavours are being made to arrange an exhibition of the designs sent in, so as to bring them all before the ratepayers.

Greenwich Cemetery.—The Burial Board for the parish of Greenwich have received designs for two chapels, entrance lodge, and gates, of the intended new cemetery at Kidbrooke, near Shooter's-hill. From the designs sent in, those of two of the competitors, respectively distinguished by the words "Crosier" and "Rest in Peace" were considered most deserving of approval. Ultimately, the board decided in favour of the designs bearing the signature of "Crosier," the author being afterwards found to be Mr. Samuel Hewitt, architect, of Southwark.

SALT YOUR CHIMNEYS. In building chimneys, put a quantity of salt into the mortar with which the intercourse of bricks are to be laid, and the effect will be that there will never be any accumulation of soot in that chimney. The philosophy is thus stated: the salt, in the portion of mortar which is exposed, absorbs moisture from the atmosphere every damp day: the soot thus becoming damp falls down to the fire-place. [Very agreeable!] —*A late American publication.*

UNIVERSITY MUSEUM: IRONWORK, CENTRAL COURT.

THE UNIVERSITY MUSEUM, OXFORD.

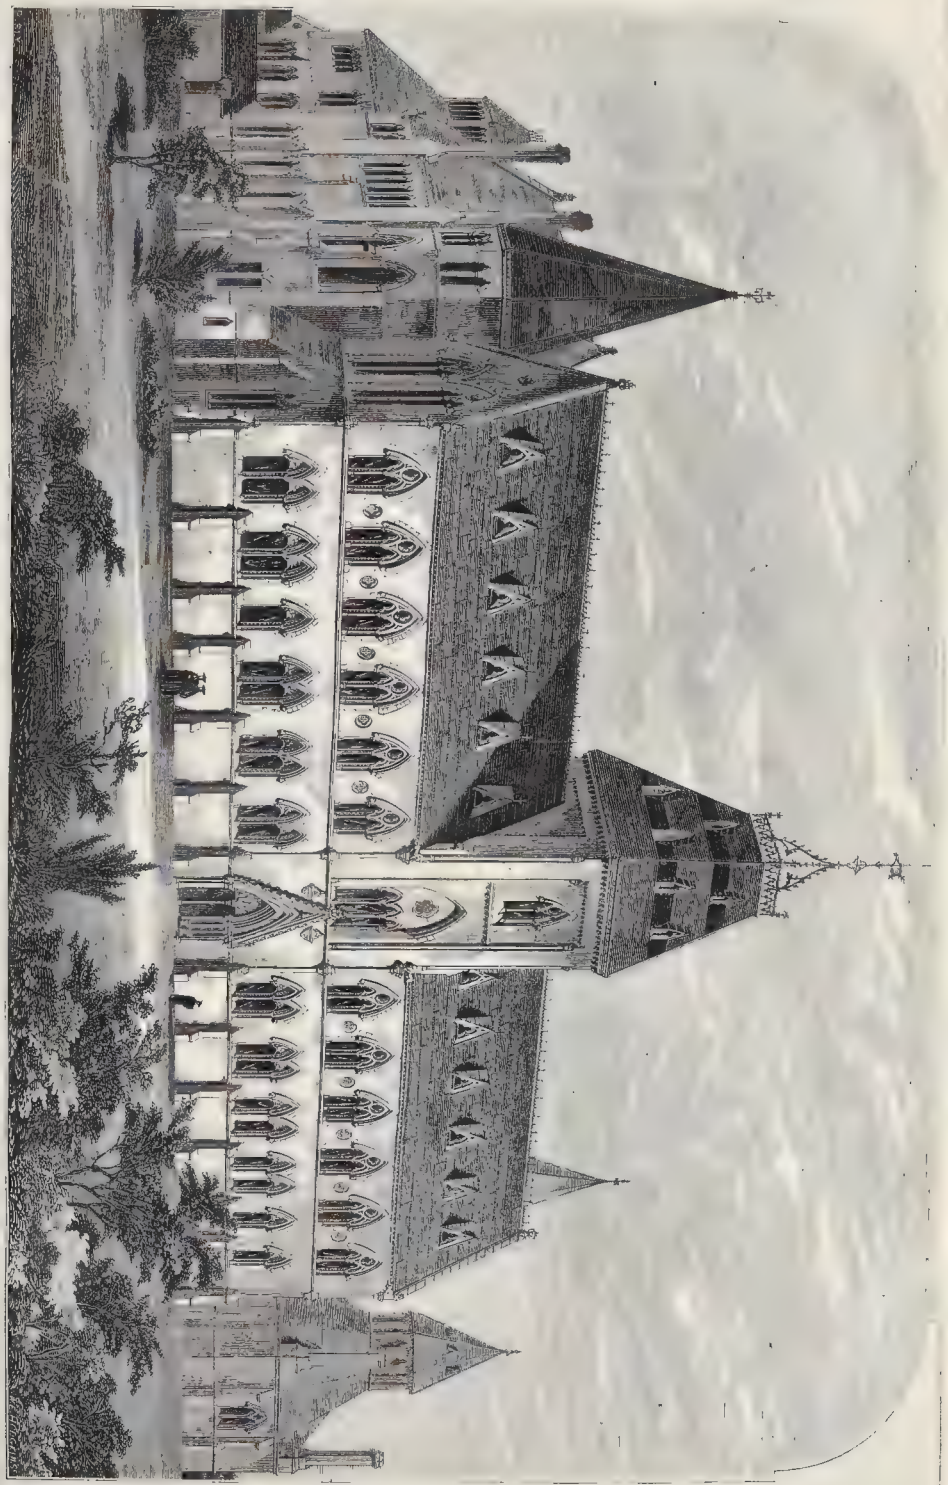
OUR engraving represents the entrance front of the proposed University Museum: the low building on the right is the laboratory. Comparing it with the plan (p. 291, *ante*), it will be seen we have omitted a low building on the left appropriated to anatomy, in order to make the view of the rest of the building larger.

We give, too, an illustration of the spandril of the ironwork, which is to be set up in the central court of the new museum. There will be five arcades formed in wrought iron. The spandrils are each to be of a different design, having the foliage of various trees—the maple, hawthorn, oak, lime, &c. as the types of their ornamentation.

It was one of the characteristics of mediæval architecture that it boldly adopted and found fitting expression for every material of its locality, whether the limestone of one district, the flint of another, or the marble of the third; so also with the arts of the age—sculpture, stained glass, ceramic art, works in metal, were all similarly applied.

For a museum, where light is of the utmost importance, the delicate treatment of which wrought iron is capable is of the greatest value, giving freedom from all those obstructions resulting from material less malleable.

The design and execution of this part of the building are entrusted to Mr. Skidmore, and we shall not fail to note the manner in which he may execute his task.



CHURCH-BUILDING NEWS.

Dowlais.—A monument has been erected in the church here over the remains of Sir John Guest. The vault is in the centre of the chancel, over which has been laid a granite slab of great weight, and on which is the simple inscription—"Sir John Guest." The monument is placed in the eastern side of the church, above the family pew. The inscription is of gilt letters on granite ground, surrounded by cornices and columns in alabaster, marble, and Caen stone. It ends with the following texts:—"Seest thou a man diligent in his business? he shall stand before kings."—"Blessed are the dead who die in the Lord."

Baschurch.—Through the liberality of Mrs. Barrett, of Prescott, who is said to have lately become possessed of a large fortune, a new church is about to be erected at Weston Lullingfield, in this parish. Mr. C. K. Mainwaring, of Oteley-park, has given a site about a quarter of a mile to the north of the village of Weston, and facing the distant range of Denbighshire hills. The plans are not yet fixed on, but it is stated that the parsonage-house will be connected with the church by means of a cloister. Mr. Edward Haycock, jun. is the architect; and the works will be carried out by Mr. W. T. Rogers, of Beaumaris, Anglesey. On Tuesday before last the foundation-stone was laid by Miss Mesham, niece of Mrs. Barrett.

Preston.—The restoration or rebuilding of the parish church here has been completed, and the new edifice opened. The old church was razed to the ground (with the exception of the lower stages of the tower), and the present structure has been entirely rebuilt upon the old foundations, in the Middle-Pointed style. The body of the church is a parallelogram, consisting of nave and north and south aisles, with tower and spire at the west end, and chancel at east end of nave. There is also a south aisle against the chancel, and the porch forming the principal entrance into the church is placed on the north side of the tower, and at the end of the north aisle. The other entrance is on the south side, opposite. The north and south aisles are both divided into six compartments, each compartment containing a large pointed window, the upper part or head having tracery of a varied and flowing decorated character. The divisions are marked by buttresses, ornamented with carved and enriched canopies. The clerestory of the nave above contains the same number of compartments or divisions on each side as the aisles. The east end of chancel contains a large decorated window of five lights. The south side of chancel aisle is somewhat similar to the north side of chancel, except that there are no pinnacles, and the parapet is plain. The east end is also filled with a large window. The tracery of these last windows comes down on the jambs, after the manner of many windows in continental cathedrals of the Flamboyant style. The porch consists of a crocketed gable, with two panelled buttresses at each angle, with carved pinnacles. The doorway is very large, with moulded arch, and is enriched with carving and ornamental niches on each side. A suitable window and panelling occupy the gable. The tower is in two stages, with two buttresses at each angle. The tower and spire are 205 feet high from ground to top of vane. A moulded plinth runs all round the church. The body of the church is 51 feet 6 inches wide, by 93 feet long, and the extreme length internally from the west wall of the baptistery in the tower to the east wall of the chancel is 162 feet. The roof of the nave is 50 feet from floor to ridge. The church will accommodate about 1,200 persons. Mr. Shellard was the architect, and Mr. Foggett the contractor.

Keighley.—The church of St. Mary the Virgin, at Eastwood, recently consecrated, is in the early decorated style. The plan is cruciform, but without aisles. The organ chapel on the north side of the chancel is balanced by the vestry on the south side. The nave is divided exteriorly into four compartments or bays, separated by buttresses of two stages, which die away in the walls below the eaves course. Each bay contains a one-light narrow window, with a three-foiled head. The west elevation of the nave contains two two-light windows, three-foiled, with four foils in the head, surmounted in the gable with a spherical triangle doubly foiled. The whole is surmounted with a bell-gable and cross. The elevations of the north and south transepts have each one two-light window, flanked on either side with a window of a single light, three-foiled. The gables have spherical triangles like those already referred to. The east window of the chancel consists of four lights, forming two fenestellæ, surmounted by a circle enclosing four four-foiled circles. The fenestellæ have each light three-foiled, and in the head a three-foiled circle. The accommodation is for 530 persons, all free. Through the liberality of a lady, the east window of the chancel has been filled with stained glass, the work of Mr. F. Barnett, of Edinburgh. The following are the dimensions of the church: nave, east to west, 67 feet; north to south, 24½ feet. Chancel, east to west, 21 feet; north to south, 22 feet; entire length, 88 feet. Transepts, east to west, 22 feet; north to south, 18 feet; entire width, 60½ feet. Messrs. Perkin and Backhouse, of Leeds, were the architects.

PROPOSED UNIVERSITY MUSEUM, OXFORD.—MESSRS. DEANE AND WOODWARD, ARCHITECTS.

HUMAN LONGEVITY.*

M. FLOURENS, perpetual secretary to the Academy of Sciences, ought, as a professor of comparative physiology, to be well able to write an interesting and instructive work on such a subject as this; and, indeed, what he has written is both interesting and curious; but we must confess that it falls short of our expectation, both theoretically and practically considered. True, he professes but to "touch" upon some of the most important points of the study and the theory of life, and he does go both lightly and briefly over it; but he stimulates our expectation in the outset by saying, with undoubting confidence, "I solve the mystery, *as far as it can be solved;*" whereas, after perusing all he has said on the subject, we incline to think that he ought simply to have told us that he had solved the mystery, *as far as he could solve it;* for, in more points than one, other physiologists have even already far surpassed him in their progress towards such a solution; and M. Flourens, in these instances, has not even taken advantage of what has been already done towards so desirable an end.

The practical object which M. Flourens has in view is a good one. "I have wished," he says, "to prove a thing that is not sufficiently well understood, which is, that man possesses a great power of life; and that, by making good use of this reason, he can greatly extend this power." Is it not strange that with such an object in view the author has not one word to say in favour of those external circumstances and arrangements of a sanitary nature on which health, and hence long life, in truth, so much depend? So far, indeed, from this, he assures us that "the duration of our life depends neither on climate, food, nor variety; it depends *upon nothing external;* it depends *only* on the internal constitution, and upon the intrinsic virtue of our organs." That staminal vigour of constitution is one essential—nay, a primary essential—to longevity, who can doubt? but it is not hence the only essential. Even Cornaro, for instance, M. Flourens's great exemplar, might have enlightened him on this point a little, where he says,—"I have never lived in places where the air is bad," and where he also adverts to other external circumstances unfavourable to health and long life. No doubt many do live to a good old age *in spite of* unfavourable sanitary arrangements, but, few will doubt that in such instances the life would have been still further prolonged had external circumstances been more favourable. So, too, with irregular or intemperate habits of life: some have certainly attained to old age in defiance of such habits, but would they not have lived still longer had these habits been avoided? When the inspired writer spoke of "three score and ten years" as the limit of the life of degenerate humanity, doubtless everything was intuitively taken into account that tends to abbreviate life, and so reduce its average length; but look to the divine endeavours, at the very same time, to obviate such causes, by the institution, amongst the Jews, of positive *sanitary* laws, regulations, and observances, in regard to diseases, purifications, unclean animals, food, &c. which it would be well for Gentiles, no less than for Jews, did they still give heed to. We do not quarrel with M. Flourens for extending the "three score and ten" alleged length of life to even a century. Indeed, we have more than once semi-seriously proposed the institution of a sanitary association for the lengthening of life to a hundred years; and we are still a believer in the possibility of such an extension, whatever may be the amount of the probability or improbability of its general attainment. M. Flourens's idea that a century is the normal term of human life is deduced from certain facts, as he alleges them to be, in regard to the growth, continuance, and decay of various animals. He regards it as a law, amongst the higher order of mammalia at least, that an animal lives, on the average, five times the period expended in its growth. Thus, since the human being, he urges, continues to grow to about the age of twenty, when its gristle has fully become bone, therefore the normal term of his life is five times twenty, or a century. The growth here alluded to, however, is but one out of two species of growth. The body grows first in size or length mainly, and then it consolidates—grows in girth, or rather in *firmness* and *solidity* mainly, or "fills up." M. Flourens appears to imagine that he is the first discoverer of this secondary process of *consolidation*. "After growth," he says, "or rather after the developments in length and in size, I find still a third, not indicated by physiologists, but which appears to me none the less real. I mean that of the deep interior work which acts in the most hidden parts; and rendering all these parts more complete — *firmer*, — also renders all the functions more certain, and the entire organization more perfect." Now, so far from this author having been the discoverer of this process of *confirmation*, as we may call it, or consolidation, physiologists have perfectly well known and recognized it for many years, as he may find, for instance, by reference to the late Dr. Gregory's admirable work on life. And what is more, physiologists have well known, also, what M. Flourens appears not to be aware of, that the very same cause which first builds up the animal frame and then consolidates it, next proceeds to constrict and wither it away,—that old age, or natural decay, and death, in short, are produced by the mere continued, uncounteracted, or at least paramount, operation of those very *concentrative* forces which first *composed* the frame by adding composite particle to composite particle, in the semi-fluid embryo and the soft and tender child, till the limit of growth was consummated in the final consolidation of the body so composed. Composition may be named as the first grand process (ever alternating with decomposition, but ever overcoming it till the body be evolved). Consolidation is the next. The last is that general process of constriction or *ultra*-consolidation in which the firm and vigorous muscle, for example, becomes hard and stiff almost as a board; and in which the whole of the fleshy tabernacle proceeds on the way, as it were, towards petrifaction into a mere ossified statue, long ere which dread consummation the heart has ceased to beat, the lungs to play, and the animal to live. That this fell constrictive process can be even temporarily retarded by ordinary sanitary arrangements we do not mean to urge, although we have listened in our time to not unfeasible arguments to this end against the use of food containing *lime!* On the contrary, this constrictive withering process is necessarily implied in the unhindered continuance of those very forces which constitute the vigour and the prime of healthful life. These forces we have said are, in their general nature, essentially concentrative. It is concentrative force which drives us ever onward, from infancy to old age,—from the cradle to the grave. Can this dread power be ever overcome, even temporarily, or to a partial extent? Is there no counteractive force, equally inherent in, and constitutional to, the highest form and evolution of animal life, as is the concentrative, but whose tendencies are the reverse, to draw us backwards from old age towards youth? Why this would be a renewer of the youth! No doubt of it. Here we would have the true elixir vitæ. But we know too well, by all the sad experience of mortal man, that there is no such counteractive. Yet *how* do we know that there *is no* such counteractive? All we do know from experience, it must be admitted, is that no such elixir ever does operate towards the accomplishment of so sublime an end. In fact, we scarcely know even this: on the contrary, physiologists tell us that there *is* such a counteractive which does operate *towards* such an end, although it be not a complete counteractive or restorer. Macnish, in his "Anatomy of Sleep," even calls this restorer "the only elixir vitæ." Sleep itself is that imperfect restorative to which Macnish and other physiologists allude. As, in the active concentrative vigour of waking life, we take, each day, as it were, one full step onwards towards old age and our inevitable grave; so, in refreshing, restorative sleep, we retrace,—but, alas! only partially,—only as it were by *half* a step,—the fatal progress we had made while exhausting life's limits in the vigilant state. Though "the praise of the whole earth," then, sleep—

> "Balmy sleep!
> Beloved from pole to pole,"

is but a siren after all, that wiles us onward towards inevitable destruction while it seems to promise us eternal bliss. In the vigour of middle life, such is the apparent balancement of the vital forces that physiologists say their only wonder is, that so glorious a machine should ever progress towards decay, or ever stop; and that experience alone is capable of undeceiving us on that point. And, from what they tell us of sleep, we must conclude that were *it* but a little more intense and perfect of its kind,—not longer or more abundant in mere quantity be it noted, but intenser and more powerful in quality,—as an irradiator, we shall say, of what is concentrated, an expander, a dissolver, of what is consolidated or constricted, a restorer of what is lost,—we should in reality possess that blissful elixir vitæ which Dr. Macnish has called it, spite of all its shortcomings and defects. Ah! Monsieur Flourens, there are mysteries here on which you have not even "touched;" far less have you evolved them so far as they may yet be evolved. Life, according to Shakspeare, "is rounded by a sleep." Why sleep, then, which constitutes one whole hemisphere, as it were, of the full *round* of life, is not even alluded to by a physiologist, such as M. Flourens is, in such a work, as a probable influencer of longevity, we cannot comprehend: probably he felt that here the "mystery" was likely to become too profound. We can imagine even an ardent penetrator into life's mysteries, such as Flourens certainly is, pausing on the brink of that ocean of uncertainty which divides us from anything like tangible ground in this dark mysterious hemisphere of life,—this "brother," this "shadow of death,"—and gazing seaward, as across a tossed and unstable Atlantic of misrule and mad confusion of life, and through a hovering mist at length impenetrable; but with no guiding star, no eye of a Columbus to lead him forward in full faith towards the unfolding of so vast a mystery; and till this mystery *be* unfolded, we are persuaded that physiologists ought humbly to acknowledge that the subject of longevity is one they know very little about.

Meanwhile, however, we can at any rate fight against those external agencies of man's own setting up, which admittedly produce wretchedness and shorten life.

---

* "On Human Longevity, and the Amount of Life on the Globe. By P. Flourens. Translated by Charles Martel. Second edition. London: Baillière, Regent-street. 1855.

METROPOLITAN MEMS.

County Fire Office, Cornhill.—The house which has been erected on Cornhill for the County Fire Office, under the direction of Mr. Alfred Beaumont, has two noticeable façades, very creditable to the architect. It is five stories in height, faced with Anston stone. The largeness of the windows on the one-pair story in Cornhill aids in giving an appropriate character. The ground story displays some delicate ornamentation. The amount of the contract was 15,000*l.*

The Paintings in St. Paul's—Considerable progress has been made by Mr. Parris in his restoration of the paintings in the dome of St. Paul's Cathedral. About three-fourths of the dome, besides the lantern, are completed. The right-hand figure, with books, in the easternmost compartment, has an extravagant aspect, but probably the artist has but restored. It is to be regretted that the same ability and expenditure were not employed to decorate the dome on sound principles instead of in renewing a colossal error.

Testimonial to Dr. Croly.—A considerable party were gathered together at the Mansion House, by the Lord Mayor, on the 29th ult. on the occasion of presenting a bust to Dr. Croly, subscribed for by a number of his friends: they afterwards partook of a *déjeuner* in the Egyptian Hall, when the Rev. Dr. (who had previously addressed the assembly at some length), Mr. Monckton Milnes, the Vice Chancellor, Alderman Wire, and others spoke.

Art in the City.—On Saturday, the 7th, the Lord Mayor will receive at dinner the representatives of various artistical bodies, to meet the members of the Royal Academy.

Bryanstone-square.—A correspondent, who finds fault with the alteration of the name of this square to Bryanston, says it was derived

from one Bryan and a certain stone in the neighbourhood! If the objection were not more valid than the story, it would be unnecessary to allude to it. The square has its name from E. Bryanstone Portman, esq. of Bryanstone, Dorset, father of Lord Portman, the present ground-landlord. According to the "Curiosities of London," it was built on Ward's Field, by David Porter, who was once chimney-sweeper to the village of Marylebone.

Smithfield and Lincoln's Inn.—A reader asks us to tell him which occupies the largest area, old Smithfield Market or Lincoln's Inn-fields. The area of Lincoln's Inn-fields is very considerably the larger. The area of the market is said to be 6¼ acres, while that of Lincoln's Inn-fields is more than 11⅓ acres.

Birchin-lane.—A large set of offices, fireproof and of a substantial character, has been erected in Birchin-lane, City, for Messrs. Waterlow, under the direction of Mr. F. Leake. The pilasters and entablature of the shop-front are of grey and red granite; the rest of the front is of stone and white brick. It is to be regretted that the front is not straight.

Buckingham House, Pall-mall.—Buckingham-house, in Pall-mall, has been purchased by the Government for Lord Panmure's office—thus placing the War-office very near to the Ordnance-office. We believe the house is not to be materially altered—so that Soane's architecture, such as it is, will be spared a little longer. Various clubs have been *nibbling* at it, but the Government now has walked in and swallowed it up.

PROVINCIAL NEWS.

Bilston.—New schools for workmen's children have been erected by Messrs. John Bagnall and Sons. The building adjoins their works and collieries at Capponfield, near Bilston. The school-room is 52 feet 6 inches long, by 25 feet 2 inches wide, and has a chancel 23 feet by 15 feet at the east end, separated from the school-room by a screen 7 feet high. The walls are built of blast furnace cinders with freestone dressings. The roofs are open, having all the timbers exposed internally. The east window, of three lights, has been filled with stained glass by Hardman, of Birmingham, at the expense of the workmen. The subject of the centre light is our Saviour blessing little children. The cost of the building, exclusive of fittings, warming apparatus, and site, was 175*l.* Mr. W. D. Griffin, of Wolverhampton, was the architect, and Mr. Johnson, of West Bromwich, the builder.

Evesham.—The chief stone of the new bridge here, lately described in our columns, was laid on Thursday in last week by the mayor of the town.

Stratford-on-Avon.—Six tenders for the erection of the proposed Corn-Exchange have been received by the committee, varying from 1,990*l.* to 2,433*l.* Three of them are from builders residing in Stratford, one from Coventry, one from Birmingham, and one from Evesham. No final decision has yet been made.

Newport, Cardiff, &c.—The dock accommodation of the southern ports of the principality is being rapidly extended. The long-proposed new dock at Newport has being commenced. The extensive new dock at Cardiff is expected to be finished in August next. The trade of these ports is increasing, and the same may be said of Swansea, where it is proposed to extend the west pier of the harbour to the extent of 600 feet, erect a lighthouse at the extremity, and form the old bed of the river into a half-tide basin, with an area of three acres. The channel from the floating harbour to the sea is being deepened.

Liverpool.—Another pair of large iron gates have been erected at the southern entrance to the area of St. George's-hall.

Oldham.—The chief stone of the Lyceum was laid on Monday in last week, by the president, Mr. James Platt, in presence of Lord Stanley, the mayor of the town, a body of Freemasons, and many other persons.

Halifax.—The new railway station was opened on Saturday before last. It has a frontage of about 236 feet, and consists of two wings, brought forward from the front about 6 feet, with a centre part brought forward three feet. At the principal entrance is a portico with four columns. There is one general entrance for passengers of all classes, 25 feet by 7 feet, with a booking-office on each side, 24 feet by 16 feet. The platform next the station is 323 feet long and 21 feet wide. The platform opposite the station is 450 feet long and 18 feet wide. The iron roof over the building is 73 feet in width, and is divided by fifty-three principal rafters. The works have been executed by Messrs. G. Thompson and Co. contractors. The stone for the building has been supplied from Ringby delphs, and that for the platforms from Northowram. The plumber's work has been done by Mr. Walsh, of Halifax. The chief engineer of the works was Mr. Meek; resident engineer, Mr. Watt; architect, Mr. James Butterworth, of Manchester.——On Tuesday in last week the foundation-stone of the new almshouses and blue-coat school, about to be erected by the trustees of Mr. N. Waterhouse, on the vacant ground near Trinity church, was laid by Archdeacon Musgrave. The ground on which the buildings are to be erected comprises about 5,924 square yards, on which there will be three blocks of houses and a large school. Each set of houses will cover 108 feet of ground by 38 feet, and the school 121 feet by 41 feet.—The style of architecture is the Pointed. Each dwelling is to consist of a sitting-room, a kitchen, pantry, &c. and all the rooms are so constructed that they may easily be heated with hot water. The Blue-Coat School will consist internally of two schools, one for girls, and another for boys; a committee-room, master's parlour, sitting-room, kitchen, &c. besides a large dining-room for the whole school. The second story will be divided into twenty-four bed-rooms, for the accommodation of thirty boys and thirty girls.

Hartlepool.—The Great Northern Breakwater, designed to elongate the headland on which Hartlepool is built, is progressing. There is now on the ground about 100,000 cubic feet of building material ready for laying. The pier is being built chiefly of artificial stone, composed of Portland cement and broken stones. Moveable staging has been constructed, by means of which from a hundred to a hundred and twenty tons of material have been set and built in daily during a week.

Derry.—Fourteen wooden huts, roofed in the cottage form, are in course of erection at the Ebrington Barracks. These huts measure from 40 feet by 20 in width: twelve of them are intended for quarters for the non-commissioned officers and privates, and as they will be capable of accommodating twenty-five men in each, the whole will afford room for 300. The two other huts will be fitted up for officers' quarters. These wooden houses will be heated by stoves, and substantially floored.

Leeds.—The Kirkgate Covered Market, which is to be erected upon the plans of Mr. C. Tilney, C.E. the borough surveyor, will be principally constructed of cast-iron and glass in the English style of architecture, and will have a west frontage of 240 feet to Vicar-lane, a south frontage of 150 feet to Kirkgate, an east frontage of 312 feet to Smithfield-street, and a north frontage of 132 feet to Ludgate-hill. The entire area covered will be 4,100 superficial square yards. The external part is to be supported by seventy cast-iron columns. The interior will be divided into three bays or avenues, by means of two rows of columns ranging the whole length of the structure from north to south, these columns being braced by cast-iron four-centered arched girders, extending from pillar to pillar, and forming three arcades, along the top of which will be placed the horizontal water conductors and supports to the roof—the pillars themselves forming the vertical water conductors. The three roofs are to be constructed of malleable iron on the string-and-girder principle, and covered with Westmorland slate. On the apeces of the three roofs will be elevated lantern lights, extending the entire length of the ridges, and glazed with strong glass, under which are to be cast-iron ventilating louvre frames, with galvanised iron louvres. The whole plan of the building has been arranged on the 12 feet square principle; so that the arches, strings, girders, &c. will all be of equal length. Each of the shops or stalls will be 12 feet square, the footways 12 feet wide, the carriage-roads 24 feet wide, the centre avenue 36 feet wide, and the two side avenues 48 feet wide. Thus the metals and castings will work in every direction, causing the building to be constructed at a comparatively small cost, considering the minute details and enrichments. Seventy-nine covered stalls will surround the structure. The roads and entrances are so arranged that nearly every shop will have two frontages. The shops will be divided and covered by corrugated iron. The corrugated iron will in no instance be exposed to the weather. Each shop front will be divided into four compartments by four arches—one of which will form the doorway, and the remaining three again subdivided and glazed. The stalls will cover an area of about 1,300 square yards, and the roads, stands, and entrances, will form one large area of about 2,800 square yards in the centre of the building. In all, there will be seventeen entrances 12 feet wide each, and six smaller entrances of six feet wide each. The total estimated cost is 14,000*l.*

MORE OF THE "SCIENCE OF STATISTICS."

CENTRAL ARCHIVES AT BERLIN.

SINCE we printed the memoranda on this subject, we have fallen upon some additional interesting information in the columns of a foreign print. There exists in the city of Berlin a private institution for the accumulation and diffusion of statistical information upon all matters relating to political economy in its most comprehensive sense. It is under the direction of Herr Otto Hubner, at whose sole expense it is maintained; but the great advantages which it offers to the public, and the services which it has already rendered to several European Governments, demand that its scope should be more widely known.

This is not the place to speak of the importance of statistical studies. Those who know their value, and are engaged in their pursuit, will agree with us in saying that every effort which is made to collect promptly reliable information concerning the actual condition of different countries, is deserving of the utmost encouragement. In such efforts Herr Hubner has been for many years engaged with very great success. In the furtherance of his designs he has received official information from the governments of the following states;—Prussia, Austria, Bavaria, Saxony, Baden, Hanover, Oldenburg, Mecklenburgh, Brunswick, Saxe-Coburg, Saxe-Gotha, Hamburg and Bremen, Russia, France, England, the United States, Brazil, Spain, Denmark, and Belgium. Many public institutions and private persons are also already in communication with his bureau, and several governments not named above have given assurance of their co-operation. From these various sources, about 5,000 documents have been accumulated, which are arranged in six departments, as follows:—

1. General statistics.
2. Statistics in relation to emigration and colonization.
3. Statistics pertaining to insurance.
4. Statistics in regard to finances and banks.
5. Statistics concerning customs.
6. Statistics of railroads.

The direct practical relation in which these divisions stand with commercial and industrial prosperity has already enabled Herr Hubner to be of great service in the promotion of public works and private enterprises in different countries of Europe. Statistics which it would have required weeks and months to have obtained by application to official statistical bureaux, where such departments exist, and which it would have been impossible for governments to obtain where there are no statistical bureaux, he has been able, by a wide system of correspondence, and by remarkable enterprise, to collect with promptness, and to place at the service of the public.

The consequence has naturally followed, that applications are now often made to Herr Hubner by various governments, as well as by private insurance and commercial companies in the different cities of Europe, when general statistical information is desired. For the complete success of

an enterprise like this, which aims at placing before the public of every country the *statistics* of every country, it is evident that there is need of general co-operation upon the part of those who are interested in such investigations. Our object here in detailing the attempt is first to inform our readers where they may find a large collection of general statistics, which is constantly supplied with fresh material from a wide variety of sources; and secondly, to express a hope that those who have the control of new statistical information in this country, in whatever position they are, may bear in mind Herr Hubner and the Central Archives of Statistics in Vienna. There is perhaps no class in the kingdom to whom such an institution is of higher value, upon occasions of ever-recurring frequency,—while at the same time there is no class who have it in their power to contribute more to such a fund of knowledge,—than the readers of the *Builder*.

COMMERCIAL DOCKS, ROTHERHITHE.

ON Wednesday, 27th ult. the water was admitted into the New Dock constructed for the Commercial Dock Company by Mr. Kelk, the contractor, and described in our pages some time ago. Messrs. Walker, Burges, and Cooper, are the engineers. The High Sheriff of Surrey, Mr. James Gadesden, assisted by Mr. Carter, a director, opened the sluice on the north side of the cofferdam, while the chairman of the company, Mr. Alexander Sim, assisted by the chairman of the dock committee, Mr. Edmund Brandt, opened the sluice on the south side. We understand that the opening for the admission of ships will take place early in July, and that the company will be enabled to admit ships of the largest tonnage.

SURREY ARCHÆOLOGICAL SOCIETY.

AT the annual meeting of this society, held on the 27th ult. the proposition that the operations of the society should be extended to Middlesex was discussed, but the feeling of the meeting being against it, the motion was withdrawn. The meeting was presided over by Mr. W. J. Evelyn, one of the members for the county. Mr. Austen, of Chilworth, gave some account, on the spot, of the Castle at Guildford, claiming for it, on not very sufficient grounds, an earlier date than is usually ascribed to it; and the Rev. C. Boutell read a paper on "The Monumental Brasses of Surrey." Mr. Britton, by a lively speech, saved the dinner from being a failure. From the report of the hon. secretary, Mr. Bish Webb, it appears the society now comprises 415 members.

DOINGS IN IRELAND.

A NEW Presbyterian church, schools, and manse are to be built at Carrickfergus.

The Lords of the Treasury have sanctioned the application for the grant of 6,000*l.* in aid of the Dargan Fund, for the erection of suitable premises on the site of "The Dublin Industrial Building" at Leinster-lawn.

Alterations and repairs are now in progress at the Convict-office, Dublin Castle-yard, and two workmen were recently precipitated from a high scaffolding by the falling of some new brickwork thereon, which resulted in the death of one.

The first stone of the new Roman Catholic Church of the Holy Trinity, Cookstown, was laid on Whit-Monday. It is situated on an eminence at the southern entrance to the town. The plan comprises nave, chancel, side-aisles, and chapels, with tower and spire at west end of nave, and sacristy on the south side of chapel. Total dimensions, 158 feet by 63 feet; height, from ground line to ridge of roof of nave, 64 feet. The tower and spire will be 185 feet in height. The style is Decorated Gothic of the fifteenth century. It is expected that the church will be consecrated in about two years. Mr. J. J. M'Carthy, M.R.I.A. architect.

The new Roman Catholic Church of St. Joseph, Caledon, has been consecrated.

An inquiry is being prosecuted as to the desirability of carrying into execution either of two plans submitted respectively by Mr. Gibbons (harbour engineer) and Mr. Rendall, C.E. for improving the harbour of Kingstown, and affording additional accommodation to the packet service. That of the former gentleman has been partially carried out, and involves the construction of a pier 800 feet by 60 feet, to run from the water-tank, and to be connected with the railway at the level of the atmospheric. The connecting rails are to be under a tunnel near the station. 45,000*l.* is estimated to complete the work. Mr. Rendall proposes a connecting line of railway from the station round the inner side of the eastern pier, to about the first angle of the pier beyond the wolf hulk. A floating pontoon, and wall 25 feet high along far side of pier, also the narrowing of the mouth of the harbour, are proposed by this plan. Estimated cost, 180,000*l.*

Notices of Books.

Dictionary of Geography—Descriptive, Physical, Statistical, and Historical; or, Gazetteer of the World. By A. K. JOHNSTON, F.R.S.E. Second Edition. Longman and Co. London. 1855.

THE first edition of this work having been exhausted, the author, who is her Majesty's Geographer in Ordinary at Edinburgh, has, it appears, revised and corrected it up to the most recent possible dates, and made many additions, so that the whole constitutes almost a new work, a large portion of the volume having, in fact, been rewritten, while the remainder has been corrected. Though comprised in a single volume, this is a comprehensive and well-proportioned Gazetteer of the world. It might, indeed, have easily been bound up into more than one volume, as it consists of no less than 1352 large octavo pages; but while for facility of reference the limits have been condensed by abbreviations and otherwise, any division into more than one volume has also been avoided for similar reasons. The work is well worthy of commendation and favour as a standard book of general geographical reference, and is likely to meet with a rapid sale in these war times, when the eyes of all are turned abroad in various directions throughout the world.

A School Atlas of Astronomy. By A. K. Johnston. Edited by J. R. Hind, F.R.A.S. Blackwood and Sons, Edinburgh and London. 1855.

THIS is a handsome volume of plates and notes, by the same author, illustrative of that wonderful science of which all know a little, but none very much. The plates, besides maps of the stars, comprise various interesting engravings of the nebulæ or star clusters, the comets, the solar spots, the moon's surface, the planetary system, double and coloured stars, &c. the whole printed in colours, and the notes explanative of the plates.

Illustrations of the Useful Arts. By C. TOMLINSON. No. 1. The Manufacture of a Needle. London: Myers and Co. Leaden-hall-street. 1855.

THIS is the first of a series of little treatises which ought to be, and we doubt not will be, highly interesting as well as instructive, inasmuch as they are to be accompanied by specimens of the manufacture treated of, in its various stages of preparation. Thus, in the present instance, we have, on a card, enclosed, together with the tract, in a pasteboard sheath, ten little pieces of metal, showing the various stages through which a needle passes, from the wire cut for two, to the perfect and polished needle. The next is to be on the pin. The editor of this series, Mr. Tomlinson, is already engaged on another series of a similar kind, but relating chiefly to woven fabrics, paper, &c. under the sanction of the Board of Trade Department of Science and Art. He is best known to our readers as the editor of the very good "Cyclopædia of the Useful Arts," recently issued.

Miscellanea.

THE RUINS OF THE BLACKFRIARS' MONASTERY, AT HEREFORD.—Great improvements have been effected in the Conigsby Hospitals, and at and around the neighbouring ruins of the Dominican Monastery. Mr. John Arkwright, of Hampton Court, the present patron of the hospitals, has caused an entire clearance to be made of the rubbish which has for many years choked up, and partially hidden from the eye of the visitors, these interesting remains; and under the superintendence of Mr. Samuel Williams, of this city, says the *Hereford Times*, the surrounding land is being laid out in grass-plots, edged with box, and separated by broad gravel paths. The interior of the Refectory is to be levelled, and also sown with grass. The space round the Preaching Cross has also been divested of unsightly objects which long encumbered it.

GUTTA PERCHA PIPES.—The complaint we alluded to last week, and which is from Mr. Alexander Marshall, a plumber, is to the effect, that when gutta percha pipes for the conveyance of water leak, the agents of the company say they have been cut by the plumber, and he gives the particulars of a case in a nobleman's mansion, where the accusation had been wrongly made against himself:—"As plumbers," the writer says, "are generally considered averse to the use of gutta percha, there is a presumption against them, and direct and official accusations like the one I report, so unhesitatingly made, would have *primâ-facie* weight; and had not the nobleman to whom it was addressed been a just and dispassionate employer, I should have been dismissed his house and service with disgrace." Examination showed that the leakage proceeded from defective workmanship; and the agents of the company admit that the opinion was too hastily given. The pipe had been fixed two years and a half.

TESTIMONIALS TO THE LATE MAYOR OF OXFORD.—Amongst the testimonials presented to Alderman Spiers, of Oxford, on the 16th ult. was a singularly interesting album, designated the "Friends, and Guests' Gift," comprising contributions, literary and artistical, from 125 authors, artists, and men of science, more or less known to the public. Mr. Spiers discharged the duties of his office in no common manner, and has had the good fortune to find his efforts appreciated. We had written a few particulars of the presentation for our last number, but were forced by press of matter to omit them.

ST. MARY'S, ISLINGTON.—An endeavour is being made to raise funds to repair this church. The present state of it is hardly creditable to the parish, and a considerable outlay is absolutely necessary in order to render its internal condition such as becomes the mother church of a vast population. An estimate has been made of the probable expense which must be incurred; and it is found that an outlay of 600*l.* or 700*l.* will be required.

THE PANOPTICON.—A course of lectures on "The Genius of the Great Composers," by Mr. Leicester Buckingham, illustrated by selections from their works, is now being delivered here. Those already given have treated of—1. The music of the ancients; Ambrosian Chant; Gregorian Tones; Italian School—Festa, Palestrina, Allegri, Scarlatti, Corelli, Pergolesi, and Piccini. 2. The Italian School—Cimarosa, Cherubini, Spontini, Rossini, Bellini, Donizetti, and Verdi. 3. The German School—Handel, Bach, Gluck, Hadyn, and Mozart. Next week the subjects will be:—1. German School—Beethoven, Spohr, Flotow, Weber, Schubert, Mendelssohn, Meyerbeer, and Wagner. 2. French School—Early French music; Lully, Gretry; Influence of Gluck; Le Sueur, Boieldieu, Auber, Félicien David, Halevy, and Hérold. 3. The Old English School—Music of the Elizabethan Age; Morley, Purcell, Locke, Greene, Arne, Calcott, and Linley.

NORWICH SCHOOL OF ART.—This institution has now been in existence about ten years. The school, however, has not been adequately supported by the citizens. The council having determined to raise the building for the Free Library a story higher, accommodation will be afforded for the school, and thus the rent will be saved; while under the new Act, when passed, grants of sufficient amount may be made to the school as well as to the library and museum. Mr. Claude L. Nursey, the new master, has introduced an entirely new system into the school, which, according to the local *Chronicle*, has very considerably revived it during the past year. On Tuesday in last week the annual meeting of the subscribers was held at the rooms in St. Andrew's. In the afternoon there was a meeting to dispose of the usual routine business, the election of officers, appointment of committee, &c. for next year; and in the evening a considerable number of the subscribers and their friends, as well as the students, assembled in the rooms to witness the distribution of prizes. The drawings in competition were hung round the room, and were inspected till the room became too crowded. The mayor distributed the prizes.

A MEETING OF ART-WORKMEN is to be held at the Architectural Museum, Canon-row, Westminster, on Monday, the 9th instant, when the Rev. F. D. Maurice, will make an address.

IMPROVEMENTS AT WINDSOR CASTLE.—Amongst other minor works in progress about the immediate precincts of the Castle, a subterraneous passage is in course of formation, commencing in the basement of the Cornwall Tower, and extending through the north side of the Castle, below St. George's Hall, into and across the Quadrangle, and joining the passages in the basement-floor of the south side of the Castle, thereby forming a complete chain of communication from the Porter's Lodge, to the south-east angle of the Castle. On each side of this extensive passage there will be a continuous range of coal and other store cellars, the want of which has long been felt.

NEW WORKS IN ST. JOHN'S CHURCH, BARNET.—In the small church of St. John, Potter's-bar, three stained-glass windows have lately been placed over the communion-table, "in memory of Harriet, widow of George Byng, esq. M.P." There are nine scriptural subjects depicted in the three windows, namely,—"The Annunciation of the Virgin Mary," "The Birth of Christ," "The Baptism," "The Agony in the Garden," "The Crucifixion," "The Burial of the Saviour," "The Resurrection," "The Ascension," and "The Descent of the Holy Ghost." The windows were put up by Mr. O'Conner. Since their erection the Rev. H. G. Watkins, M.A. (the incumbent), has had the Commandments, &c. re-written on the walls, between the windows, in old church text, ornamented with borders, by Mr. Castell, decorator. Between the vestry-room and the chancel is erected the tomb of the late Mr. and Mrs. Byng. It is of Caen stone, in the Tudor style, and was designed by Mr. J. Clutton, architect. It is an altar-tomb, surmounted by a canopy. The front is divided into four panels, upon which are carved the family crests. Alternating with these are four recessed niches, each crowned with an ornamented projection. Each niche contains a statuette of a widow with a tear on her face, but all the figures differing from each other. Beneath the canopy is a tablet divided into panels, and in the centre is carved the inscription.

WANT OF LIGHT.—A Mr. Pease, of Darlington, complacently states that, "As proprietor of the only gasworks in Middlesbro', my orders have hitherto prevented gas from being sold to the theatre." It is to be regretted that there are not other gasworks in the place under more sensible and charitable guidance.

THE CAMBRIDGE FREE LIBRARY.—This institution was opened to the public on the 28th ult. a not unworthy mode of celebrating the anniversary of her Majesty's coronation.

GAINFORD.—A Roman Catholic chapel erected on the north side of the turnpike-road from Darlington to Barnardcastle, and dedicated to St. Thomas and St. Osmond, was inaugurated on Tuesday before last. It was built from the designs of Mr. J. Gibson, of Newcastle, in the Early English style, and its decorations were executed by Mr Henderson, of Edinburgh. The windows are all of stained glass, and lancet-shaped; those over the altar filled in with sacred emblems, surrounding a figure of the Saviour in the centre compartment, and of St. Osmond and St. Thomas in the side windows. Attached to the church is a suite of apartments for the officiating priest. The erection of the building, it is said, was undertaken by the Rev. Thomas Witham, of Lartington-hall, at his own cost. The entire cost has been three or four thousand pounds.

SCULPTURED FIGURES IN CHURCHES.—Very great excitement has been caused by the introduction of sculptured representations of certain passages of the Saviour's life in the chancel of a church now building at Bedminster, near Bristol. A memorial having been addressed to the bishop calling for their removal, his lordship says,—"I shall pursue the practice which I have adopted for several years past, of having a new church examined, before consecration, by eyes which I can trust better than my own in seeing distant objects, with the express purpose of obviating the danger of confirming, by the ceremony of consecration, the introduction of objectionable or superstitious appendages."

ELECTRO-TELEGRAPHIC PROGRESS.—The electric wires that are being laid down to connect Constantinople with Sebastopol have all been safely paid out, and Adrianople will now be in instant communication with Constantinople. A Turkish enthusiast is spoken of who cut off a couple of yards of the wire, and brought it home to his own house, in the hope of being the first to know the news. When taken up for the offence, he admitted the fact, but added that all he wanted to learn was the fall of Sebastopol: as for the news transmitted by Government, he would have had discretion enough not to have inquired into that. While apt to smile at Turkish ignorance, however, we ought to remember that the old woman who expected her answer to be forwarded by electric telegraph was not a Turk.——The French commissioners who are taking part in the conferences relative to the continental telegraphs, urge a reduction of one-fifth in the tariff for the despatches. The Belgians urge a reduction, but to a less extent.

CEMETERY CHAPELS.—As an illustration of your remarks on cemetery chapels and burial-boards, a few weeks ago, read the enclosed advertisement as a specimen of what we have going forward at Lewes.

A. B.

*** The advertisement says: "The Burial Board for the parish of St. Michael, in Lewes, are prepared to receive Tenders from persons willing to enter into a contract for the erection on the new burial-ground of the said parish, two chapels under one roof as large as can be obtained for the sum of 150*l.* without the internal fittings!"

METROPOLITAN COMMUNICATIONS.—The committee met again on 19th June, when Mr. J. H. Stevens, engineer to the City Improvement Commissioners, was examined as to the traffic of the City, particularly east and west. He recommended generally the plan proposed by Mr. Pearson to meet the wants of the City. Mr. F. Bennoch advised a proper organization of the omnibus system to prevent obstruction, and an underground railway, with its terminus either in Smithfield or Fore-street, or any place within half a mile of the centre of the City, to obviate such nuisances as that of hundreds of railway vans and waggons in narrow streets. The bridges, he remarked, ought all to be toll free.

DINNER TO MR. CALDER MARSHALL, R.A.—This sculptor being on a visit lately to Edinburgh, a few of the leading artists and personal friends of Mr. Marshall in that city entertained him at dinner in the London Hotel.

SCOTTISH ANTIQUITIES: ORDNANCE SURVEY.—In answer to an application from the Scottish Society of Antiquaries, Lord Panmure has intimated that he will give instructions to the engineer department of the Ordnance, directing that, so far as practicable, "all remains, such as barrows, pillars, circles, and ecclesiastical and other ruins, may be noted on the ordnance survey of Scotland now in progress."

SUSSEX ARCHÆOLOGICAL SOCIETY.—The general annual meeting of this society, we learn, will take place at Horsham, on Thursday, the 12th inst. The objects to be visited, besides the parish church of Horsham, and other points of antiquarian interest in the town, will also include the ancient church at Worth.

NEW TEXTURES.—A discovery has been made by a M. Petit, of Lyons, and patented, of a means of impregnating silk, by a chemical process, with gold, silver, brass, or iron, so that it can be woven with perfect flexibility, and thus form, as it were, stuffs of those metals. A specimen is to be placed in the Universal Exhibition. Could not metallic threads be lacquered or glazed with various coloured vitreous or glassy coatings, so as still to remain flexible, and be capable of being woven into very brilliant textures? Aluminium, or zinc, might have sufficient toughness for such threads, or iron itself might be made bright enough for the purpose, so as to render the textures moderate in price. Copper, too, might do with certain colours; and perhaps the vitreous glaze might be effectible (as by some wire-drawing process) in such a way as to remain prismatic, and so to yield rainbow hues on the surface of the metallic thread. The brittleness of mere threads of glass might thus be overcome. Textures we know, have been woven even with ordinary threads of various coloured spun glass mixed with silk. Verb. sap.

SMOKE PREVENTION.—Mr. A. V. Newton, of Chancery-lane, has secured a patent, by which he claims—Certain means for contracting the passage or passages by which the flame and gases of combustion escape from the fireplace to the flues, "and for dividing or diverting the current of the flame and gases at that part of the furnace, and thereby permitting the oxygen of the air or steam admitted in streams to the furnace to combine with the gases of combustion, and effect the consumption of the smoke."

IMPROVEMENTS IN ROLLING MALLEABLE IRON.—In many of the more remote towns and villages considerable difficulties are still experienced by blacksmiths, from not knowing they can save much time, and make superior work, by using the various forms into which malleable iron is now rolled. Angle iron, T-iron, double T-iron, are now common forms, but only recently extended to general use. Following up this course of progressive improvement, Messrs. Boydell and Glasier, of Camden Works, London, and Anchor Ironworks, Smethwick, have patented some useful forms of iron, adapted for fencing, hurdles, and various other purposes.

PUBLIC CLOCK.—As accessory to an edifice with provision for a clock-face, you may not object to the readers of the *Builder* being made acquainted with the following mode of exhibiting time by public clock. Every hour to be shown by both hands, minute and hour, pointing to its distinguishing figure. Every half-hour to be known by the two hands forming straight upon a diameter of the clock-face: the hour-pointer being between the figures of the past and current hours. Also at all other intervals of five minutes, the hands to be situate correlatively between figures, *i. e.*:—

At 25 minutes to or past,	150 deg.	apart.
At 20	,, ,,	120 deg.	,,
At 15	,, ,,	90 deg.	(rightangle) apart.
At 10	,, ,,	60 deg.	,,
At 5	,, ,,	30 deg.	,,
And for each minute always	6 deg.	,,

This direct geometrical relation may recommend the proposition to encouragement by local authorities.—WM. WALDRON.

SEWERS.—The following tenders were sent in for constructing a sewer along Webb's-lane, Starch-green, and Victoria-road, in the parish of Hammersmith, for the Hon. the Commissioners of Metropolitan Sewers:—

Ycoman	£3,716
Carlisle	3,677
Goodison	3,550
Dethick	3,544
Chamberlin	3,480
Thirst	3,371
Rowe	3,334
Adamson and Sons	3,319
Hill	3,292
Lee and Lavers	3,274
Phillips	3,234
Bird	2,958
Batterbury (accepted)	2,900

S. FARRELL, 20, Catherine-street, Jonathan street, Vauxhall, Lambeth.

TO PLUMBERS AND BUILDERS.

THE Advertiser, who is a good Plumber and Gas-fitter, wants a SITUATION. If required would be willing to fill up his time painting and glazing.—Direct, C. H. at Mr Burnham's, 22, Ashford-street, Difficult-street, Hoxton.

TO IRONFOUNDERS, SMITHS, AND CONTRACTORS.

THE Advertiser is open to an ENGAGEMENT as Managing and Practical Foreman of Works, either in town or country. Fifteen years' experience, with testimonials. Terms moderate.—Address, A. B. 71, Drummond-street, Euston-square.

THE Advertiser, aged 24, who has been brought up on railway, town drainage, and public works generally, and for the last eighteen months has been employed on works under the Commissioners of Sewers, is desirous of an ENGAGEMENT. Thoroughly understands levelling, setting out, and measuring up work, and the entire duties of assistant engineer. Could take the management of a job, if required.—Unexceptionable references can be given.—Address, P. W. 33, Lunardstreet, Caledonian-road.

TO ARCHITECTS

THE Advertiser, who is a first-rate Draughtsman and likewise has had great experience in detail and perspective drawings, &c. is desirous of an ENGAGEMENT with an Architect, of good practice, where he may obtain further improvement.—Address, ALPHA, Hebert's Library, 48, Cheapside.

THE Advertiser, who has been some time in the profession, and is capable of making finished and perspective drawings, &c. is desirous of an ENGAGEMENT with an Architect, of good practice, where he may obtain further improvement.—Address, ALPHA, Hebert's Library, 48, Cheapside.

THE Advertiser, who is a good General Draughtsman and Colourist, and thoroughly acquainted with the various duties of an office, desires an ENGAGEMENT with an Architect.—Address, T. V. 23, Rutland-gate, Hyde park.

TO ARCHITECTS.

AN Artistic Colourist, Draughtsman, and Designer, OFFERS his SERVICES in the Preparation of Perspective Views, with landscape and figures; also in general Drawing, on moderate terms. Address, A. Z. 91, Denbigh-street, Belgravia.

TO ARCHITECTS, BUILDERS, &c.

A THOROUGH PRACTICAL MAN, aged 43, having had eighteen years in the general superintendence of some of the largest public works in the kingdom, is accustomed to take out quantities, make plans and working drawings, keeping accounts, and has a knowledge of levelling, plot line, &c. is in want of a SITUATION. Country not objected to. Testimonials of the first class.—Address, T. Office of "The Builder."

TO BUILDERS, PAINTERS, AND DECORATORS

AS FOREMAN.—WANTED by the Advertiser (who is about to leave his present situation), a permanent SITUATION as practical FOREMAN. Has been used to the superintendence of a number of painters and paperhangers, and the thorough management of a decorating business, measuring, book-keeping, &c. References given.—Address, J. B. Post-office, Nottingham.

A FRENCH GENTLEMAN, an Architect, who has just published a work on Architecture, and another nearly ready, is desirous of meeting with a Partner or other interest in an Architect's Office. Being a clever draughtsman, his knowledge of general drawing, mouldings, mathematics, and natural science, would be of some advantage, if pupils were kept.—Address, by letter, Mr. STAPLEY, 20, Cannon-street, City.

A BUILDER'S CLERK is open to a SITUATION, at a moderate salary.—Address, A. B. care of Mr. Perkins, Grocer, 88, Snow's-fields, Bermondsey.

TO MASTER PLUMBERS.

AS PLUMBER'S ASSISTANT, a strictly sober, respectable young Man, with a small knowledge of the business, wishes for a permanent SITUATION. Wages moderate. Address, A. B. Lee's Dining-room, Pemberton row, Gough-square, Fleet-street.

AN ENGINEER, of considerable experience in the practical branches of the profession, and who has a knowledge practically of copper and tin mining, dressing, &c. is desirous of an ENGAGEMENT. Has been about, go abroad for railroad or for mining purposes, or to represent by agency an engineering firm. Testimonials of the highest character.—Address, A. B. 15, Montpelier-place, Brompton, London.

TO LAND AND ENGINEERING SURVEYORS.

A YOUNG MAN of some experience in surveying, taking levels, a good draughtsman, &c. is desirous of an ENGAGEMENT. Satisfactory references can be given.—Address to Mr. J. WINDER, Greenhill, Harrow.

MODELLING AND MOULDING

A YOUNG MAN is desirous of EMPLOYMENT, who understands modelling and moulding, can draw accurately, and undertakes moulding for metal purposes. Wages not such an object as a situation.—Direct A. B. 40, Upper Johnstreet, Fitzroy-square.

A YOUNG MAN, aged 19, who has been articled for three years to a dealer in materials for builders, in a large country town, is desirous of obtaining a SITUATION in a similar capacity. He understands the measuring and selling timber, bricks, lead, glass, paint, paperhangings, &c. and can have a good recommendation. Address, T. C. Mr. Lowry's, 2, Wellington-terrace, St. John's-wood.

A GOOD DRAUGHTSMAN, well acquainted with English and Classic Architecture, desires a SITUATION in an Architect's Office.—Address, DELTA, Office of "The Builder."

FREEHOLD BUILDING GROUND, at OLD FORD, with Liberal Advances, to LET, suitable for fourth-rate houses, which, being much required in this rapidly-improving neighbourhood, let and sell as soon as completed. For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 48, Pentonville-street, Pentonville.

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St. John's Wood. For particulars apply, by letter, post-paid, to W. L. No. 2, Craven-terrace, Paddington.

KENSINGTON GORE.—Valuable SITES for FIRST-CLASS MANSIONS in the NEW (Prince Albert's) ROAD, KENSINGTON GORE (with frontages to the park-like property purchased by the Royal Commissioners for the Exhibition of 1851 as a site for Institutions connected with Science and Art), may be obtained upon ninety-nine years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

BUILDING LAND TO BE LET at NORWOOD, within three minutes' walk of the station, where fifty trains stop during the day. Water laid on, drains made, roads nearly completed, and a West-end line by the Crystal Palace will be shortly opened. The advantages of this situation, in point of variety and rural scenery, with its easy access to and from the metropolis, with trains running up to twelve o'clock at night cannot be excelled. Houses are in great request. For particulars and plans, apply to W. F. LOW, Esq. 67, Wimpole-street, Cavendish-square.

ELIGIBLE FREEHOLD BUILDING LAND at NOTTING-HILL.—TO BE LET, at a low ground-rent, with moderate pre-session, with frontage towards Lutymer-road and Clifton-terrace, a very desirable PLOT of GROUND, suitable for third or fourth-rate houses, or the FREEHOLD to SELL. For particulars apply to H. NORTHCROFT, Esq. Surveyor, 40, Nottingham-place, St. Marylebone; or Mr. SHILCOCK, 30, Royal-crescent, Notting-hill.

FREEHOLD BUILDING LAND, TO BE LET, at Bath-road, in large or small plots, where bricks will be advanced; it fronts a high road with good sewers. Plenty of sound and water may be easily obtained on the ground, and every probability of a railway crossing the land—notices having been given. Apply personally to the owner, at Chesterfield-house, Bath-road, Peckham, before TEN o'clock, a.m.

KENSINGTON PALACE GREEN.—TO BE LET, by PUBLIC TENDER, on WEDNESDAY, the 1st of AUGUST next, on building leases, SEVEN PLOTS of CROWN LAND, part of the late Royal Kitchen gardens.—For plans and particulars, apply at the Office of Her Majesty's Woods, &c. 1, Whitehall-place; or at the Office of JAMES PENNETHORNE, Esq. 7, Whitehall-yard.

FREEHOLD BUILDING LAND.—TO BE LET on lease, for 99 years, for the erection of detached residences, in the most desirable part of Clapham-common.—For plans and particulars, apply at the Office of DAVID YOUNG, Architect and Surveyor, 1, Thurlow-place, Wandsworth-road.

CAMDEN-TOWN CEMETERY.—BUILDING ESTATE.—TO BE LET, on Building Leases for 99 years, very eligible SITES upon the carriage-road having good frontages into Camden-street, Pratt-street, and Buchanan-street. There is a great demand for houses and shops of the third rate in this locality, which is abundantly supplied with trains to the North-Western and North London railway stations, and the Hampstead-road. Plans may be seen, and particulars obtained by application to H. E. KENDALL, Secretary, 21, Parliament-street, Pall-mall East; or to JOHN DANSFIELD, Esq. Solicitor, 29, Craven-street, Charing-cross.

TO BUILDERS and GENTLEMEN desiring a first-class situation of well-known salubrity for building purposes.—TO BE LET, on lease, a most desirable PLOT of FREEHOLD LAND, near the Norwood Junction, and a mile from the Crystal Palace. The new West-end line will have a station at Norwood, and when opened, will afford the additional advantage of communication with the West-end as well as with the City. Frontage 100 feet, which has a fine view of the Crystal Palace, and the surrounding delightful scenery.—For terms, apply to Mr. R. BRETT, 52, Trinity-square, Southwark.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars road, near the bridge, respectfully invites a personal inspection of Engines, Machinery, Foundries, Plant, or Premises for Sale, intrusted to his care, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MACHINISTS, and OTHERS.—A first-rate PREMISES in the above line, on the Surrey side, TO LET, fitted up with an excellent horse engine boiler, 3 furnaces and fans, screw-cutting and other lathes, benches, anvils, blocks, tools, &c. The present spacious premises are in full work, and will be supplied on long lease on advantageous terms. Apply to AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars-road, near the bridge.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth. Those spacious PREMISES, with ten arched brick houses under the Waterloo bridge road, TO BE LET or LEASE. There are two capital houses, with cranes and scaffolding on the wharf, and the premises which have been used as a timber-yard for nearly forty years, are in good repair.—For terms apply to HENRY MOTT, Esq. Solicitor, 5, King's-road, Bedford-row.

COTTAGES at TWICKENHAM TO BE SOLD. FOUR SEMI-DETACHED VILLAS, each containing six commodious rooms, with other conveniences and garden. They are named Crosby-villa, and are situate in a most healthy locality, at Twickenham, common, on the high road from Twickenham to Hampton-wick, facing the ground of Sir William Clay, one mile from the railway station. Also, a House and Shop at the back of the above, containing eight rooms, with cart entrance. Term, seventy-four years unexpired, at a ground-rent of 2l. per annum each. The purchase-money may be paid by instalments, extending over three years. Adequate space to be taken for ground, with good frontage, with a view to add the free land, for building other premises. Apply, to Mr. H. DICKSON, House-agent, 23, Penton-place, Walworth; or to Mr. F. RICHARDS, 5, Church street, Hackney.

TO BE DISPOSED OF, the Sixteen Years' LEASE of a HOUSE, containing ten rooms, in a healthy and respectable neighbourhood. At present let to a respectable tenant, clearing the sum of 36l. a year. Price 70l.—Address A. D. care of Mr. Hines, Advertising-agent, 12, Cath rine street, Strand.

TO ENGINEERS, CONTRACTORS, AND OTHERS.

WANTED, at the Northumberland Dock, ONE or MORE PORTABLE STEAM-ENGINES, and Apparatus, to drive a Cofferdam, of 4,800 feet in length, a double row of whole timber piles, 5 feet apart.—For further particulars, apply to Mr. THORBURN, Contractor, Northumberland Dock, North Shields.

NEW PRINCIPLE IN BANKING.

UNITY

JOINT-STOCK MUTUAL BANKING ASSOCIATION.

Established for the purpose of introducing the principle of mutuality into banking operations, whereby the customers of the bank become entitled to bonus, by way of interest, estimated after the rate of fifty per cent. on the net profits.

Capital, Half a Million Sterling.

Divided into 5,000 shares of 100*l.* each. Deposit, 50*l.* per share.

This amount will be payable by two instalments, namely, 10*l.* on allotment, and 40*l.* at the time of incorporation. Shareholders have the option of paying up the whole 50*l.* on the shares allotted to them, in one instead of two payments. It is not expected that any further call will be made.

The business of the bank will not be commenced until the whole of the capital has been subscribed, and one-half thereof paid up.

By a clause in the deed of settlement, shareholders are entitled to interest at the rate of five per cent. per annum on all share capital paid up, previously to the declaration of bonus, as well as to fifty per cent. of the net profits.

With the exception of the amount needed to defray the necessary preliminary expenses, the paid-up capital will be invested in Government securities until the bank is incorporated.

TO BE INCORPORATED BY ROYAL CHARTER.

OFFICES.

The Central Offices of the Bank will be at the Unity-buildings, No. 10, Cannon-street, City. During the necessary alterations, business will be carried on at the

TEMPORARY OFFICES.

CHIEF—40, Pall-mall, London.
CITY BRANCH—38, Cannon-street, London-bridge.

Major Martin Mulkern, Ightfield House, Regent's park.

* * This number to be increased within the court of directors is completed, the governor and deputy governor will be appointed.

BANKERS.

The London and Westminster Bank.
Chief Offices—Lothbury.

And at the following Branches, at either of which deposits on shares will be received and receipts given, viz. :—

Westminster Branch, 1, St. James's-square.
Bloomsbury Branch, 214, High Holborn.
Southwark Branch, 2, Wellington-street, Borough.
Eastern Branch, 87, High-street, Whitechapel.
St. Marylebone Branch, 4 Stratford-place, Oxford-street.

SOLICITOR Thomas Taylor, esq. 27a, Bucklersbury, London.
GENERAL MANAGER James Knight, esq. F.S.S.
SECRETARY—Henry Lake, esq.

Among the various improvements introduced during the present century, in connection with the commercial institutions of this country, there is not one in itself so entirely satisfactory—not one which has been attended with more solid and complete success, or that has conferred greater benefits on the community than that of joint stock banking. It has opened up means for profitably employing capital, provided the public with institutions replete with known security, arising from paid-up and subscribed capital by numbers of individuals, and given to banking operations a tone and an importance previously unknown

The joint-stock banking system has grown out of a combination of circumstances, arising amongst other causes, from the prosperity of the country, and the increase of population. It has now become a positive necessity to the commercial world, and it provides such advantages as command the cordial approval and support of the public.

The late Sir Robert Peel, in a speech delivered twenty years ago in the House of Commons, alluding to the joint-stock principle generally, and in particular to the joint-stock bank, said—

"I look upon the principle of joint-stock companies as one of the great discoveries of modern times. I regard them, when made responsible to public opinion, as the ground on which all successful enterprise must be founded. I say further, that if there can be one description of business to which the principle of a joint-stock company can be more applicable than another, it is, under due restrictions, the business of banking."

The opinion of Sir Robert Peel, delivered in 1835, has not only been fully confirmed by the success which has attended joint-stock companies generally, but more especially by the success which has since then been obtained by all joint-stock banks that have been well established and prudently managed.

That there has existed, during the past twenty years, room for additional banks, no doubt will be entertained. For, while the six London Joint Stock Banks have created and transacted a large business—while they have extended and popularised to a great degree the principles of banking, and thus afforded valuable facilities to the commercial community, by directing capital to most profitable uses,—there is no known instance of any well-regulated and responsible private bank, which has not increased its business also during the same period. Bearing in mind the daily extension of the commercial operations of this country, and the continuous increase of the population, this is not to be wondered at. The population cannot increase without rapidly extending commerce, and adding to the wealth of the nation. This, necessarily, gives an impetus to every commercial enterprise. The banking system, therefore, like all others, must progress, and in order still further to facilitate commercial transactions, and to meet the increasing requirements of the community, new organisations must be brought about for its further development.

It is, moreover, proved to demonstration, that Joint Stock Banking, under proper supervision, affords a most legitimate and unusually profitable field for the investment of capital.

CONDITION OF ALL THE EXISTING LONDON JOINT-STOCK BANKS.

The present position of the Six existing Joint-Stock Banks in London (this number including all that are in operation) may be seen from the following Table: -

Name of Bank.	Date when established	Capital. Subscribed.	Capital. Paid up.	Amount of Deposits.	Number of Shareholders.	Number of Shares issued.	Amount of each share.	Amount paid on each Share.	Present Value of each Share.	Increase of Capital Per Cent.	Rate per cent. Dividend paid.
		£	£	£			£	£	£	£	per ct. per an.
London and Westminster ..	1834	5,000,000	1,000,000	7,177,244	1235	50,000	100	20	40	100	16
London Joint Stock	1836	3,000,000	600,000	6,161,154	870	60,000	50	10	27½	175	20½
Union Bank of London	1839	2,114,500	422,900	7,041,47	824	42,290	50	10	27	170	16
London and County	1839	889,700	394,135	3,779,941	660	17,794	50	20	38	90	19
Commercial Bank of London	1840	1,500,000	300,000	1,265,806	316	15,000	100	20	31	55	10
Royal British Bank	1840	100,000	50,000	893,721	121	1,000	100	50	—	—	6
Totals.....		12,604,200	2,767,035	26,315,473	4028	186,084					

The five totals in the foregoing table show that,—

I. The entire amount of subscribed capital in the whole of the existing joint-stock banks in London, amounts to 12,604,200*l.*

II. The amount thereof paid up is 2,767,035*l.*

III. The amount of deposits, or customers' balances, is 26,315,473*l.*

IV. The total number of shareholders is 4,028.

V. The number of shares issued 186,084.

These facts exhibit the material points in connection with the whole of the existing London joint stock banks, so far as their responsibility, business, and extent of connection, are concerned.

With respect to the profitable working of these institutions, it will be observed that the highest rate of dividend payable amounts to the large sum of 20*l.* per cent per annum, while that of the lowest is 6 per cent. Viewed, therefore, in any respect, each institution has proved to be a most desirable investment to the persons holding shares.

The small number of shareholders in all these banks together namely, 4,028—will no doubt excite surprise; and the more so, when it is known that very many of these are resident out of London. This clearly indicates that there is but a very small proportion of the public who are enabled to participate as shareholders in the business resulting from the joint-stock banking system. The comparison of 4,028 persons constituting the shareholders in the six London joint-stock banks with the number of their customers, is very small indeed; and yet these are the only persons who enjoy the profits and the bonuses resulting from the large transactions of the whole body.

It is therefore, evident that there not only exists ample room for properly established and well-regulated joint-stock banks, conducted on sound banking principles, but that by their establishment the public will be greatly benefited. It now becomes worthy of consideration, what course can be adopted in the construction and practical management of banks which will secure the most effectual identification of interests between the shareholders of a bank and its customers. As at present constituted, the shareholders alone participate in the bonuses declared by the banks.

Of late years the requirements of the public have led to the establishment of various joint stock institutions based on another principle, namely, that of mutuality. This has resulted entirely from an experience which has proved its necessity, and has led to a most desirable and successful "Unity" of purpose and interests. In no one instance has this principle failed in securing the very best results. Nor is it likely to do so; for it confers upon the greatest number of persons the largest amount of benefit.

The present joint-stock banks, as compared with the private banks, are an exemplification of this fact. The former have, unquestionably, given greater benefits to the public than the latter; but even these institutions do not carry out the principle in a comprehensive and effectual manner. It is for the accomplishment of this object that the

UNITY

JOINT-STOCK MUTUAL BANKING ASSOCIATION

is established. This association is promoted under singularly advantageous circumstances. A decidedly distinct from them, in point of capital and liabilities, it commences its career with the assistance of two powerful and popular institutions, viz the Unity Fire and the General Assurance Associations, whose united constituencies number several thousands of shareholders. So that, apart from the support that will necessarily arise from the public appreciation of the new features now proposed, there is every reason to regard the present project as one commencing under peculiarly favorable auspices. The plan proposed is that of extending the "mutual principle" to the business of banking, by paying the customers of the bank, interest, estimated according to profits, and by these means inducing them to interest themselves in promoting and extending its operations.

CAPITAL OF THE BANK.

The capital will amount to half a million sterling, with power to increase. This sum will be divided into 5,000 shares of 100*l.* each, on which a deposit of 10*l.* will be required on allotment, and 40*l.* on incorporation. This will yield a paid-up working capital of 250,000*l.*

MANAGEMENT.

The management of the bank will be conducted by a governor, deputy-governor, and a court of directors, representing the professional, mercantile, and trading interests of the country. Each of the directors must be the holder of five shares, and have paid up 1,000*l.* of the capital stock as a director's qualification. The Central Bank will be at the Unity-buildings, No. 10, Cannon-street, in the City of London, and branches will be opened in such parts, and at such times, as may be deemed desirable.

ALLOTMENT OF THE SHARES.

It will be the earnest desire of the court of directors to be very cautious in the allotment of the shares. Their object is to obtain a numerous and responsible proprietary, without distinction of class or place. For the accomplishment of this object they will require a respectable reference with each application. The shares will be allotted in small numbers, and a preference will be given to those allotments which are most likely to produce business to the bank, and extend its connection.

ADVANTAGES TO SHAREHOLDERS.

The Deed of Settlement gives to the Shareholders, out of the profits, as a remuneration for the capital advanced, and the responsibility and security for the transactions of the bank (after paying interest at the rate of 5*l.* per cent. on the paid-up shares) ..... 50 per cent.

ADVANTAGES TO CUSTOMERS.

It is in this important particular that the Unity Joint Stock Mutual Banking Association differs from all other existing banking institutions. It is the first to propound and offer for public support, a principle so equitable and so calculated to favourably advance the interests of all parties. No good reason can be assigned why a bank should not acknowledge and reward the services of those who contribute to its profits and success, as assurance companies recognise those who assure their lives or property. It is well known, that of late several assurers have been permitted to participate largely in the bonuses of those institutions, with the most successful results.

With a view, therefore, to applying this well-known and highly appreciated principle to the business of banking, after having made due provision for a reserve fund, to be regulated by the shareholders, under the advice of the directors, and paid 5*l.* per cent interest per annum on the paid-up capital,

The deed of settlement gives to the customers, as interest on their cash balances, in addition to the ordinary amount paid on deposit and current accounts a sum equal to the interest paid to the shareholders, that is..... 50 per Cent.

The deed, however, does not render it compulsory on the customers to accept such additional profit, but provides that the customer may, on opening his account, elect whether he will or will not accept it as same.

This plan, it will be observed, creates strong interest with the customers in the bank, who thus become much concerned in extending its business. It will be the means of opening up new business in quarters where banking has not hitherto been conducted; it will have a strong tendency to consolidate and preserve the attached connections of the bank; and it will thus advance its own interests, and be productive of practical benefits to the public generally.

Great difficulty exists in estimating the effects likely to be produced by the establishment of this and any other description of bank in banking. It is one that must become highly popular with every commercial interest, and with every class of the public, because its simplicity and advantages are at once to be seen and appreciated.

To those great commercial bodies which are compelled to have large cash balances constantly at their bankers, it will prove to be a serious consideration and a most important source of profit. The railway, dock gas, water, steam navigation, insurance, and other companies, professional men merchants, brokers, gentlemen of for one, and traders of all kinds, will duly estimate the difference in the system now proposed from that heretofore existing. In fine, as joint-stock banks become a public necessity, as is now proved so will the principle of mutuality, whereby these admirable institutions may be rendered still more serviceable to the public, and in no way less safe, demand the best consideration of the community at large.

BUSINESS TO BE UNDERTAKEN.

All the usual business of banking will be undertaken; and arrangements will be made for extending the transactions of the bank in every desirable quarter.

Current accounts will be made up half-yearly, namely, to the 30th of June, and 31st of December, and interest will be allowed at the rate of 2*l.* per cent. provided the balance shall not at any time have been below 50*l.* If not below 100*l.* 1*l.* per cent.

DEPOSIT ACCOUNTS.—With respect to these, the rate of interest allowed on money placed at seven days' notice will be 1*l.* per cent. under the rate of discount on first-class bills adopted by the Bank of England, regulated thereby. The Bank will give receipts for the sums so deposited; or for the convenience of depositors leaving England, promissory notes, or bills, including interest as well as principal, at not less than six months' date.

The Bank will undertake the Agency of Country and Foreign Banks, whether Joint Stock or Private, and will afford every accommodation to travellers and others, with respect to circular notes and letters of credit. It will receive all kinds of Income for its customers, including Annuities, Dividends, Military, Naval, and Civil Officers' pay. It will undertake the Sale and Transfer of Stock in the Public Funds, &c.; and will be responsible for the safe custody of Title Deeds and other securities belonging to its customers, to which they will at all times have convenience of access.

Applications for Prospectuses and Forms of Application for Shares, to be made to the Solicitor to the Association, THOMAS TAYLOE, Esq. 27A, Bucklersbury, London; to the Secretary, at the Temporary Offices, 40, Pall-mall, London; or at 38, Cannon-street, London-bridge.

HENRY LAKE, Secretary.

PELICAN LIFE INSURANCE COMPANY, established in 1797,

79, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.	Thomas Hodgson, esq.
William Cotton, esq. F.R.S.	Henry Lancelot Holland, esq.
John Evans, esq.	J. Petty Muspratt, esq.
Jas A. Gordon, M.D. F.R.S.	C. Hampden Turner, esq. F.R.S.
Henry Grace, esq.	Matthew Whiting, esq.
Kirkman D. Hodgson, esq.	M. Wyvill, jun. esq. M.P.

The Company offers—
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.

BONUS.—Four-fifths or Eighty per Cent. of the Profits are divided amongst the Policy-holders.

LOANS in connection with Life Assurance on approved security.

ANNUAL PREMIUM required for the Assurance of 100*l.* for the whole term of life :—

Age.	Without Profits.	With Profits.	Age.	Without Profits.	With Profits.
15	£1 11 0	£1 15 0	40	£2 18 10	£3 6 5
20	1 13 10	1 19 3	50	4 0 9	4 15 7
30	2 4 0	2 10 4	60	6 1 0	6 7 4

For Prospectuses and Forms of Proposal, apply at the Offices as above, or to any of the Company's Agents.

ROBERT TUCKER, Secretary.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.

The SCALE OF PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the accumulations on assurances of 500*l.* and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 500*l.* and upwards on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000*l.* of which 141,000*l.* is invested from the risk incurred by members of Mutua. Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement :—

At the close of the last financial year, the sums assured, including bonus added, amounted to £3,500,000
The premium fund to more than 800,000
And the annual income from the same source, to.. 130,000
Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

SECURITY TO EMPLOYERS.

THE TIMES ASSURANCE COMPANIES.

To Clerks and others guarantees at the lowest rates.
Plate Glass Assurance.—Windows, mirrors, &c. insured against breakage.
Every description of life and fire assurance.
Apply to the Manager, 36, Ludgate hill.

THE ALBERT ASSURANCE COMPANY.

(Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and copyhold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square W. S. VARDY, Manager.

HOUSEHOLDERS' and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.

Money received at interest at 5 per cent. per annum, payable in April and October.

Agents (with references may apply.
R. HODSON, Secretary.

INDISPUTABLE LIFE POLICY COMPANY,

72, Lombard-street; 24, Connaught-terrace; and 38, Denbigh-street, Pimlico.

At the Seventh Annual General Meeting, held at the London Tavern on the 26th inst.

Lord Viscount TORRINGTON in the Chair,

The following Report was received and unanimously approved :—

In submitting their ANNUAL REPORT to your consideration, the Board are enabled again to present a statement showing a highly satisfactory advance in the business of the Company.

At the last Annual Meeting it was seen that the progress of the Company had been greater in that than in any previous year; and it is gratifying to observe that the new business of 1854 has again exceeded that of the previous year, while the business of the current year exceeds that of the corresponding months of 1854. This large and steadily progressive amount of business has been obtained, notwithstanding the obstacles to the extension of Life Assurance, arising from the pressure of the war taxation bearing heavily upon the means of all classes of the community. While the premiums of the new business of 1854 exceed those of 1853, the expenses have been less.

At the close of the year embraced in the account now presented the revenue of the Company was a little under, and now considerably exceeds 21,000 per annum.

At the last Annual Meeting a reduction of 25 per cent was made up in the premiums of all participating policies of five years' standing, and a further reduction of the same rate of reduction shall be continued, which will enhance all the participating policies on which the annual premiums have been paid prior to this date.

The causes of such a year have been greater, as was to have been expected, than in the preceding year, but considerably under what the experience upon which the calculations of the Office are founded would have warranted us to anticipate.

Great as the success of this Association has hitherto been, the Directors would again remind the Members that their own interests, as well as the general benefit of the community, may be greatly promoted by the exercise of their individual influence.

TORRINGTON, Chairman.

London, 72, Lombard street, June 19, 1855.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parr-tt.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall Portion, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cement to stand at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark equal to any made Manufacture also, and Purchase, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs Fire-bricks, Grindstones, Cement Hammer-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour resembling the Bath stone.—CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.
CHARLES RICHARDSON, 6, South Wharf, Paddington

11, George-yard, Lombard-street, City

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the best quality manufactured on the above works. Also STOCK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise Apply to G. BOOTH, Agent, as above.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the Trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Woolhampton Hill Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire-clocks.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken the South Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for exports, or alongside rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT one quantity of rain having any effect upon it, and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Tano-Mexico," is the exclusive right of the Proprietor; and, thirdly, that "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Pileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 32s. 6d. per 1,000; floor bricks and 6-inch pavings, at 40s. per 1,000; 9-inch pavings, at 60s. per 1,000; 9-inch pavings, at 75s. 6d. per 1,000 Cash prices. Delivered on trucks in London on Eastern Counties Railway.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy resulting by the purchase of such adulterated becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. S. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting shires, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

GREAT NORTHERN WHARF, York-road, Kings-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

HOLLOW BRICKS for SALE, at a very moderate price. They are hard kiln-burnt, and having stood the winter, very suitable for purposes where strength and light weight is an object. Apply to J. S. NORTON, Brick and Tile Machinist, Union Works, Newpark-street, near Southwark-bridge, London.

Depôt, Acre Wharf King's road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c Stourbridge Fire Goods, &c. of all descriptions, and of the best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 50, Nelson-square, Blackfriars-road.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 23s. per thousand, Grizles, 26s. per thousand; Rough Stocks, 29s.; place, 1os. Terms, cash on delivery—Apply to Mr. G SMEED, Sittingbourne, Kent.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

TO BUILDERS, CONTRACTORS, &c
SAND for SALE, at 1s. 6d. per yard, quite equal to Thames Inquire of J. GROVER, on the Sewer Works, City Gardens, City-road, near the Bridge

FOR SALE, a BRICKLAYER'S CART, TWO good LADDERS, a Scaffolding, and a powerful SCREW JACK.—Apply at No. 10, New-street, Blackfriars-street.

TO BUILDERS AND OTHERS
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING of all descriptions Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Yards of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak planks, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 4 inch to 14 inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations in

Pine Planks, 12 ft. 3 in. by 11 in.....	from 3s. 6d.	each.
Spruce Deals 3 in. by 9 in.....	„ 2s. 9d.	„
Yellow ditto.....	„ 4s. 0d.	„
Honduras Mogany, in logs	„ 0s. 4½d.	per foot.
Ditto ditto, in planks and boards	„ 0s. 6d.	„
Spanish ditto.....	„ 0s. 7d.	„

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE or COMMISSION, at very low prices for cash Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MACHINE CARVING, JOINERY, and MOULDED WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.

WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable designs for Architraves and Skirting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L. are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade.—N.B. All customers having an account at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

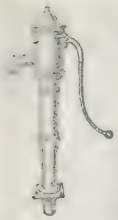
IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. S. is returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 30, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood Carver, and Fret-Cutter, 3, Hatton garden, London, begs to inform Architects, Builders, Ironfounders, Cabinet and Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch. T. H particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, delivered at my own door, for cash only. C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 18s. per cwt. given for old lead.

BUILDER'S BUSINESS to be DISPOSED OF, within three miles of the Bank.—A respectable Business, with dwelling-house, large yard, and workshops, including lofts, carts, scaffolding, benches, all for 500 guineas. This is an excellent opportunity for a young man going into business, as it has been established thirty years, and the rent of the house and premises is merely nominal.—Direct or apply, Mr. THOMAS KING, 1, St. Michael's-alley, Cornhill.



TO CARPENTERS, BUILDERS, and OTHERS.—TO BE DISPOSED OF, an excellent JOBBING and BUILDING BUSINESS in the above line, situate in a most improving neighbourhood, five miles from town. Satisfactory reasons will be given for disposing of the business; and the trade books can be inspected. Part cash will not exceed £150. Particulars may be had of Messrs. CRAFTER and SON, Auctioneers and Estate Agents, 4, Stamford-street, Blackfriars-road.

A JOBBING BRICKLAYER and BUILDER'S BUSINESS.—Mr. GREEN is instructed to SELL a BUSINESS, situate within five miles of the Bank, established fifty years; doing between £2,000 and £3,000 per annum (which will be proved by the books). The house, stabling, and premises are £70 per annum. £200 premium only is required for goodwill, stock, by valuation, about £300.—Apply at the Tollington Estate office, Holloway-road, opposite Camden road.

TO ARCHITECTS and SURVEYORS.—An old-established watering-place [PRACTICE, in the South of England, TO BE DISPOSED OF, on very moderate terms.—Address, X. Y. Z. 12, Albert-terrace, Barnsbury-road, Islington.

ROYAL POLYTECHNIC INSTITUTION. Illustrations of the effect of Russian infernal machines, daily, at 3 & 8 and 8.45. The Lecture by J. H. Pepper, Esq. on the Transmission of Vocal and Instrumental Music, from invisible performers, through a tube conductors, as delivered before Her Most Gracious Majesty and H.R.H. Prince Albert, the Patron of the Institution. The Sunguinoscope daily. TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin street, London.

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under ominous high pressure, varying from 100 to 400 feet; their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, Newcut, Lambeth.

KENT'S PAINTING-BRUSHES are of the best quality, and may be obtained at all the first houses in the trade, and of the Manufacturers,
G. B. KENT and CO. 11, Great Marlborough-street, London.
Established 1777.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, there is no impediment when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, Sole Manufacturers, 119, Blackfriars-road, and 127, Union-street, Borough; and of all respectable Ironmongers, Builders, &c.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved
CIRCULAR ARNOTT VENTILATORS,
which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit rain smoke caused by down draught.
Price, bronzed, from 6s. 6d.
D. and E. BAILEY, 272, Holborn.

ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 19, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

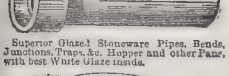
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—Closet and Trap, 5s. 6d.; Closet, 3s. 6d.; Trap, 2s.

REDUCTION IN THE PRICE OF CLOSET-PANS.



DOULTON AND WATTS,

LAMBETH POTTERY, HIGH-STREET, LAMBETH,

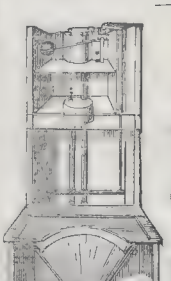
Have reduced the Price of their PATENT ENAMELLED CLOSET-PANS WITH TRAPS, to

5s. 6d.

These Pans, therefore, which have a strong Vitrified Body, as well as a White Interior Glaze, may now be obtained at the price of the commonest description of Closet-pans.

Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Pan, 3s. 6d.



Trap, 2s.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

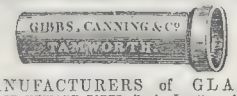
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP.

FOR STRUT USE

Price, with Gutta Percha Joints and Screws complete, 4s. 6d.; weight, about 2 oz. Can be conveyed by the post.



FOR AREAS &c.

Price, with Back Plate, 6 inches by 7 inches, each 6s.

FOR COURTS, YARDS &c.

10 inches by 8 inches, each 10s.

The above articles are protected for the Patentee by the British Government, on account of the considerations, for the advantages they possess, being a perfect trap for preventing smell proceeding, by which the water, should it be evaporated, is supplied from the pan. Water-closets can be put down to main's connection to a tenth of the cost they are at present, and the nuisance of cesspools and dry earth closets avoided. The closet cisterns are always ready for use, requiring no attention. It is well known when children have taken the fever in this country, it commences and leaves last those places where there are no drains, or where they are foul, and any persons interested in such improvement will be kind enough to write to the patentee for drawings, and if wishful, testimonials. Please order from any respectable ironmonger, contractor, or the Patentee, JAMES LEWIS, Ironfounder, Abergavenny. Specimens to be seen in the Court of Inventions, Crystal Palace, Sydenham.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Brick, &c. &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE.

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS,

manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post.

Price for Closet and Apparatus complete from 28s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St. Paul's, London.

Crown Glass, 18 tables, 30s. per Crate.

SALES BY AUCTION.

LETT'S WHARF, COMMERCIAL-ROAD, LAMBETH.

MESSRS. FULLER and HORSEY will SELL by AUCTION, at-o'clock, on TUESDAY, JULY 31, 1855, at ELEVEN o'clock, in lots, with out reserve, by direction of the assignees of Messrs. Boutflour, the SAWING MACHINERY, worked by Horn, of 8 horse-power, and Car, of Belper, including the portable and four stock deal frames, one timber frame to cut 27 inches in depth, circular saw, mandrel, and sundries machinery, the whole quite new, not having yet been fixed, and made on the most approved construction.—To be viewed on Monday previous to the Sale, when catalogues may be had on the Premises; of Messrs. Horwood, Solicitors, King William-street, Strand; and of Messrs. FULLER and HORSEY, Billiter-street, City.

TO IRONMONGERS, BUILDERS, SMITHS, COACH-BUILDERS, AND OTHERS.—By

MESSRS. FULLER and HORSEY, on the PREMISES, 160, Union-street, Borough, on WEDNESDAY, JULY 11, and following days, at ELEVEN, in lots, by direction of the Assignees of Mr. James Martyr, a bankrupt, the extensive STOCK of IRONMONGERY, bar and rod iron and steel, twenty tons rod, bar, and plate iron; five tons cast, shear, blister, and spring steel; fifty dozen spades and shovels, twenty dozen screws, assorted; bricklayers' and coopers' tools; a large assortment of cabinet brass-work, five guns, 200 dozen locks and latches, counting-house and shop fixtures and uten-ils, a few lots of household furniture, and other effects.—To be viewed on TUESDAY previous to the sale, when catalogues may be had on the Premises; of G. J. GRAHAM, Esq. Official Assignee, Coleman-street; and of Messrs. FULLER and HORSEY, Billiter-street, City.

HASTINGS, SUSSEX.—Freehold Property (land-tax redeemed)

MR. WOMERSLEY will SELL by AUCTION on the lot, at the SWAN HOTEL, HASTINGS, on WEDNESDAY, the 18th of JULY, 1855, at THREE o'clock, FOUR COMPACT PLOTS of GROUND, contiguous to the Old London-road, leading out of the town of Hastings, and one mile from the sea. Three of the plots are suitable for building or garden ground. The fourth plot is covered by a detached dwelling, called Orient Cottage, and its stabling, with a flower garden in front, and a yard behind. The premises are in substantial repair. The view from the front of the house is down the valley, looking southwards on the sea. Excellent water good dry soil, and well drained. The dwelling-house consists of a large cottage and a smaller one communicating by an enclosed passage. The larger one contains a porch and passage entrance, two sitting rooms, store-room, kitchen, scullery, and larder. The floor above has four bedrooms, water-closet, and bath-room, containing a bath, &c. There is convenience on the premises for washing, brewing, and baking; also a large coal cellar, and several water-closet. The smaller cottage has four rooms, upon which a building society has by direct bond, duly registered, a charge of 100*l*. and upwards of 50*l*. has been paid off. The house is down the valley, looking southwards on the sea. Excellent water good dry soil, and well drained. The dwelling-house consists of a large cottage and a smaller one communicating by an enclosed passage. There is convenience on the premises for washing, brewing, and baking; also a large coal cellar, and several water-closet. The smaller cottage has four rooms, upon which a building society has by direct bond, duly registered, a charge of 100*l*. and upwards of 50*l*. has been paid off. The house is 13 feet wide, all under one roof—May be viewed till the day of sale by cards only, which, with particulars and conditions of sale, may be obtained of the Auctioneer, Mr. WOMERSLEY, 1, Harold-place, Hastings.

WESTBOURNE-TERRACE.—Important Sale of unfinished first-class Residences, offering a very desirable opportunity for investment's speculation, and especially for occupation.

CHINNOCK and GALSWORTHY are directed by the Trustees for Sale, the Mortgagees concurring, to SELL by AUCTION, at the MART, on THURSDAY, the 12th of JULY, at TWELVE, in lots, ELEVEN UNFINISHED RESIDENCES, Nos. 121, 123, 125, 127, 129, 131, 133, 135, and 141, comprising the north-east portion of that noble row of town mansions, Westbourne-terrace, Hyde park. They are most substantially built and admirably situate, and have been designed to possess the accommodation for family residences, and the numerous comforts for which Westbourne terrace is so distinguished. At the time among these premises which have and occupation have developed in some of the earlier constructed mansions, the rooms being loftier, the staircases of easier ascent, with unusually spacious landings. The property comprises the only unfinished residences left to complete Westbourne terrace. The houses are in various stages of progress, the approaching towards completion, and the terrace, when complete, will present a noble facade, having an ornamented balustraded screen in front, with private entrance doors. Doric portico entrances, and Corinthian ornaments in stucco. The lease, which is very long, will immediately let. Westbourne-terrace is now daily improving in value, and increasing in public estimation, on account of its lockless, fit for immediate occupation. Possession on completion. This property can be safely recommended either for investment or occupation, and it is proposed to make arrange ments with the purchaser to continue the building, if required. Particulars with be published early, and may be obtained of Messrs. VALPY and VALPY, Sol. ors, 25, Essex-street, Strand; of Messrs. BEVAN, VIZARD, and MEARS, Solicitors, 16a, Oxford-street; of Messrs. WEBB, ROBINS, and BEVAN, 7, New-Inn, Strand; of EDWARD RYE, Esq. Solicitor, 16, Golden-square; of Messrs. FARMER and ARCHIBALD, Regent-street; and of Messrs. CHINNOCK and GALSWORTHY, Auctioneers and Land Surveyors, 28 Regent street, Waterloo-place.

TO BUILDERS, MASONS, &c.—NEW BUILDING MATERIALS.

CHINNOCK and GALSWORTHY will SELL by AUCTION, on MONDAY, JULY 16, and following days, on the PREMISES of the Proprietor, Upper Terrace of houses, Westbourne-terrace, close to the Bishop's-road, Paddington, capital NEW BUILDING MATERIALS and STOCK, collected for completing the terrace of first-class mansions, comprising about 30 stone mantels and stock brackets, 2 Portland stone steps, 10 floor boards, 3,700 half sheets, 700 bundles of laths, a quantity of oak timber and slabs, iron and water pipes, cornice, drain, junction, and bend pipes, well seasoned and prepared joiners' work, doors, sashes, as well as large houses, 40 four panelled and double-mastered doors of various sizes, shutters, backflaps, window backs and lining, cuffs, architraves and mouldings, sash cases and framing, stonemasons' work, comprising stone sinks, tooled landings, slabs, and mantles, York paving, Portland stone kerb, worked at the stairs, &c., a large block of Portland stone, a general stock of ironmongery, about 6 cwt. of nails, chiefly cut, clasp, and hand nails, and 6 barrels each, 20 tons of lime, 100 plasterers' planes, white lead, plaster of Paris and bags of hair, several thousand loads of Thames sand, road grit, and mortar mixings, scaffold boards, poles, putlogs, and a variety of effects.—To be viewed one week previously. Catalogues had on the premises; and of Messrs. CHINNOCK and GALSWORTHY, Auctioneers, 28, Regent-street, Waterloo-place.

WOOD-GRANGE ESTATE, Stratford, Essex.—61 Plots of Building Land, Freehold Ground-rents, and Freehold Dwelling-houses.

MR. W. H. DEAN has received instructions to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 25, 1855, at TWELVE o'clock, sundry FREEHOLD GROUND-RENTS, a PAIR of FREEHOLD DWELLING-HOUSES, and SIXTY-ONE PLOTS of FREEHOLD BUILDING LAND. The whole extending from the Stank-road, 1½ mile contiguous to the Forest gate station of the Eastern Counties Railway, and within a short distance of the Wanstead Forest. The building ground is high and dry, having the advantage of a gravelly subsoil, and the locality is exceedingly healthful and pleasant; and the quick and easy mode of transit, renders the situation admirably adapted for the residence of persons whose business occupation requires their day attendance in the City. There is great and increasing demand for houses in the neighbourhood, and this is a most favourable opportunity for purchasers to secure a certain and liberal interest for their capital.—May be viewed, and printed particulars and conditions of sale, with lithographed plans, may be had at the Mart; at the Eagle and Child Inn, Forest Gate; Yorkshire Grey and Swan Inns, Stratford; of Messrs. YOUNG and WALLINGS, Solicitors to the Vendor, 2, St. Mildred's-court, City; and of the Auctioneer, Stratford, Essex.

SALES BY AUCTION.

TO BUILDERS, HOUSE DECORATORS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, 1, The Mall, Notting-hill, in consequence of the removal of Mr. Holmes, the proprietor, to 16, Queen's-road, Bayswater, on TUESDAY next, JULY 10, at TWELVE o'clock, without reserve, the very valuable STOCK, comprising superior chimney-pieces, in statuary, with carved trusses, black and gold vein, black and Barbilly marble and stone; a Genoa marble table, two marble washstands, pestles and mortars, ornaments in cement, vases and plaster busts, and sundry ornamental items. May be viewed one day prior and morning of Sale, and catalogues obtained at the Place of Sale; the Royal Oak, Paddington; and at Mr. MARSH'S Offices, 3, Charlotte-row, Mansion house

FIRST ANNUAL SALE of Articles manufactured by the PATENT SILICEOUS STONE COMPANY, in their beautiful and durable MATERIAL consisting of a large assortment of vases, fountains, flower boxes, pedestals, balustrades of every description, in white Parian, statuary vein, black and Barbilly marble and stone; a Genoa marble table, two marble washstands, pestles and mortars, ornaments in cement, vases and plaster busts, and sundry ornamental items. May be viewed one day prior and morning of Sale, and catalogues obtained at the Place of Sale; the Royal Oak, Paddington; and at Mr. MARSH'S Offices, 3, Charlotte-row, Mansion house

MR. MARSH has the honour to announce that he has been favoured with instructions from the directors of the Patent Siliceous Stone Company, to SELL by AUCTION, on the PREMISES, WHITEHALL WHARF, Cannon-row, Westminster, on THURSDAY, JULY 24, at TWELVE o'clock, in lots, adapted to the trade, private buyers and others, the above important and well selected stock, forming part of their extensive annual productions. To describe the articles manufactured under the above process, which has so much engaged the attention of the scientific world, is beyond the limits of an advertisement; suffice it to say, that for durability, strength, and cheapness, as well as for delicate ornamental finish, the Siliceous Stone stands unequalled, even among nature's productions. May be viewed and catalogues obtained on the Premises; at the principal Inns in the neighbourhood; and at Mr. MARSH'S Offices, 3, Charlotte-row, Mansion-house.

MARBLE, TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—

MONDAY, 6th AUG. " | MONDAY, 1st OCT. 1855
MONDAY, 3rd SEPT. " | MONDAY, 5th NOV. "

Catalogues and further particulars to be had on application one week previous to each sale—The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE

Extensive fall of Capital Oak and Ash Timber. Westley, near Newmarket, Cambridgeshire.

MESSRS. NOCKOLDS and KING have received instructions from the proprietor to offer for SALE by AUCTION, upon the PREMISES, on MONDAY, the 16th day of JULY, 1855, at TEN o'clock for HALF-PAST punctually, on account of the number of lots—

296 Sound Oak TIMBER TREES.
16 Ash ditto.
266 Oak Saplings.
174 Ash Seconds.

792

The timber has all been felled this season, and lies contiguous to good roads within two miles of the Bullingham Station, on the Cambridge, Newmarket, and Bury (Eastern Counties) line of railway, affording an easy transit to any part of the kingdom. The Auctioneers beg to call the particular attention of ship-builders, contractors, timber-merchants, and others, to this sale: many of the trees are of great dimensions, long lengths, and excellent quality and suited for navy purposes. Twenty per cent deposit to be paid on the day of sale, and six months credit will be given for the remainder upon approved security. May be viewed upon application to John Pearson, the keeper, at Westley, of which catalogues may be had, also at the principal Inns, at Newmarket, Bury, Cambridge, and Ely; of the Auctioneers; and of Messrs. NOCKOLDS and KING, Land Agents, &c. Saffron Walden, Essex.

Note.—About 70 tons of good Oak Bark to be sold by private contract (fall of this year).

TO BUILDERS, CARPENTERS, PIANOFORTE AND CABINET MAKERS, COACH-BUILDERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, No. 62, Upper-street, Somers-town, on MONDAY, JULY 9th, at ELEVEN for TWELVE, the capital well-seasoned STOCK, comprising 1,000 yellow, white pine, and spruce planks, deals, and battens; 180 squares of prepared flooring; 3,000 feet wide pine board; 3,000 feet seantling; dry cut stuff; 5,000 feet mahogany and fine panel moulding, framed doors, pulleys, ladders, horses, partitioning, and sundry useful stock—May be viewed, and catalogues had, on the Premises, and at the Auction Offices, Carnaby-street, Hampstead-road, near the Euston Station

The ENMORE PARK ESTATE, comprising about thirty three Acres of Building Land, beautifully situate at Woodside, between Norwood and Croydon, in the County of Surrey.

MESSRS. WINSTANLEY are directed to SELL by AUCTION, at the AUCTION MART, on MONDAY, 23rd JULY, a valuable FREEHOLD PROPERTY, land-tax redeemed, and free of great tithe, consisting of about thirty-three acres of most highly productive land, commanding very extensive views of the distant and immediate picturesque scenery, the Crystal Palace, &c. It is approached from the high road from the Norwood Station, upon which it is only a short distance. Three principal roads (40 feet wide) have already been formed, extending through the land to Woodside-green on which there is a very considerable frontage, but there is full scope for the formation of others to create frontages to a much greater extent. The farm cottage, stabling, &c. fronting the green will be included in the sale. There are two churches in the vicinity. A plentiful supply of spring water is already on the premises, and the pipes of the Thames Ditton Water Company are laid within 400 yards of the estate. In the hands of a building society or capitalist this property offers attractions of no ordinary character. The estate can be viewed upon application to Mr. SKIDMORE, at the cottage. Particulars, with plans, may be had of the Auctioneer; and at the Greyhound Inn, in Croydon; at the Windmill Inn, St. James's-road, Croydon; the Jolly Sailor and White Lion Inns, at Norwood; the Crooked Billet, Liverpool-road, Islington; and of Messrs. BLAKE, Auctioneers; 28, Bread-street, Cheapside; and at the Grey-hound Inn, in Croydon; at the Windmill Inn, St. James's-road, Croydon; the Jolly Sailor and White Lion Inns, at Norwood; the Crooked Billet, Liverpool-road, Islington; and of Messrs. BLAKE, Auctioneers; 28, Bread-street, Cheapside; and at the Grey-hound Inn, in Croydon; at the Windmill Inn, St. James's-road, Croydon; the Jolly Sailor and White Lion Inns, at Norwood; the Crooked Billet, Liverpool-road, Islington; and of Messrs. DRAPER, Globe Tavern, Hatton-garden; and of Messrs. WINSTANLEY, Land and Estate Agents, 10, Paternoster-row.

FINE OAK TIMBER SUFFOLK.

MR. HENRY NEWSON will SELL by AUCTION, at BURY ST. EDMUNDS, on the 18th day of JULY, 1855, 170 FINE OAK TREES, many of which are of noble dimensions and beautiful quality, well worthy the attention of ship-builders and timber-merchants. The timber lies in the parishes of Livermere and Lawshall, and may be viewed at any time prior to the sale.—Catalogues posted free, on application to Mr. NEWSON, Land, Estate, and Timber Agent, Bury St. Edmund's.

CLEMENT'S INN, STRAND.—Old Building Materials of Three Houses.

MESSRS. EVERSFIELD and HORNE have received instructions to SELL by AUCTION, on the PREMISES, Nos. 11, 13, and 16, Clement's-inn, Strand, on SATURDAY, JULY 7th, 1855, at TEN for ELEVEN, the MATERIALS and FITTINGS of THREE HOUSES, comprising sound timber and flooring, doors, sashes and frames, wainscoting, lead gutters and flashings, sound brickwork, and other effects.—May be viewed on Friday previous to the sale, and catalogues had on the Premises; and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

SALES BY AUCTION.

CLAPTON, MIDDLESEX.—The valuable Freehold Residence of the late Samuel Burger, esq with nearly Ten Acres of Land attached, delightfully situate within Three Miles of the City, and adapted for the abode of a Banker or Merchant. The Estate also presents great capability for conversion into a Public Institution, or for a Building operation on a large scale, its proximity to the Metropolis, and the dry and salubrious nature of the Soil offering rare advantages for either purpose.

MR. V. J. COLLIER has received directions from the Executors to SELL by AUCTION, at the MART, on TUESDAY, JULY 31, at TWELVE o'clock, a noble FAMILY RESIDENCE, eligibly situate at Clapton, within two minutes' walk of the Clapton and Railway station at Hackney. It contains a spacious entrance-hall and staircase, handsome dining and drawing rooms of large proportions, breakfast-room, morning-room, three principal bed-chambers, with dressing-rooms attached; five secondary bed-rooms, servants' hall, man's room and pantry, kitchen, scullery, extensive cellarage and other domestic offices; the whole in a perfect state of substantial and ornamental repair; double coach house, harness-room an l four-stalled stable, with loft over the whole, and coachman's dwelling adjoining. The residence has a portico entrance, with carriage sweep, lawn, and shrubbery in front, enclosed by a dwarf wall and iron palisades, and two pairs of folding gates. On the opposite side of the road is a meadow of about seven acres, and in the rear is an extensive lawn and undulated pleasure grounds, interspersed with gravelled walks and flower borders, and planted with fine American and other shrubs, of luxuriant growth, and ornamental trees of great beauty and variety. Also a highly productive kitchen garden, enclosed by lofty brick walls, clothed with choice fruit trees, and abundantly cropped; a thriving young orchard, and a close of meadow land of park-like character, ornamented with fine old timber. In the grounds is a double grapery, containing choice vines in full bearing, and several convenient forcing-houses; also a noble storebuilding of elegant architectural design, intended for a music hall or temple, but now appropriated as a gardener's dwelling, with large dairy in the basement. There is also a complete farm-yard and buildings at the extremity of the estate, which comprises altogether upwards of 9½ acres, the whole freehold and exonerated from land-tax. Particulars and plans may be obtained of Messrs. TAMPLIN, Esq Solicitor, 139, Fenchurch-street; at the Mart; and of Mr. V. J. COLLIER, 3, Moorgate street, of whom cards to view the property may be obtained fourteen days prior to the sale.

MILE-END-ROAD.—Three acres of valuable Building Ground and a commodious Residence, eligibly situate, within a very short distance of the City.

MR. V. J. COLLIER has received instructions to SELL by AUCTION, at the MART, on FRIDAY, JULY 20, at TWELVE, in one lot (unless previously disposed of by private contract), a large and valuable SURFACE of BUILDING GROUND, containing about three acres, desirably situate, in the rear of York place, Mile-end-road, together with the excellent Dwelling-house adjoining, No. 6, York-place, at the side of which is a good roadway, affording a communication with the above land from the high road, in addition to which there is a frontage in the rear of about 300 feet. The ground affords space for the erection of nearly 100 houses of the fourth-rate class of building, which are in great demand in the neighbourhood, and it presents to the speculator a fine opportunity for a successful building operation. The tenure is copyhold of the manor of Stepney, but, inasmuch as the fine is certain and of trifling amount, the cost of enfranchisement would be inconsiderable.—For particulars apply to Messrs. SWAIN, FOX, and SWAIN, Great Swan House, Old Broad street; and to Mr. V. J. COLLIER, 3, Moorgate-street.

VALUABLE FREEHOLD BUILDING GROUND, exonerated from land-tax, eligibly situate about a mile and a half from Whitechapel Church.

MR. V. J. COLLIER will SELL by AUCTION, at the MART, on FRIDAY, the 20th of JULY, at TWELVE o'clock, in one lot, a large PLOT of BUILDING GROUND, desirably situate in the rear of No. 1, New-gate, Mile-end-road (Old Town), presenting a frontage of nearly fifty feet to a good back road, and extending about 400 feet in depth, thus affording space for the erection of about thirty cottage-rental houses, which let readily in this populous locality at very remunerative rents. The ground adjoins the property described in the preceding advertisement, and would form a valuable addition thereto.—Particulars may be had of Messrs. BIDDLE, GRUBER, and ROWSELL, Solicitors, 5, Bibliter-street; at the MART; and of Mr. V. J. COLLIER, 3, Moorgate-street.

Important and Unreserved Sale of Belgian and English Cart Horses, &c. to be SOLD by AUCTION, by

MESSRS. BRETHERTON and HARRISON, at the MIDLAND COUNTIES REPOSITORY, Birmingham, on THURSDAY, and SATURDAY, the 26th, 28th, and 21st inst. commencing punctually each day at TWELVE o'clock, the following HORSES, &c. &c. without reserve, being the valuable well-selected stock of the Corporation of Birmingham, and sold by order of the Public Works Committee, who have let their work by contract. SIXTY-two superior Belgian and English Cart Horses, principally young, and remarkably clean, short legged, muscular horses, combining symmetry and power with great quickness and quickness of action, being in good working condition; also upwards of seventy sets of thill and chain harness, head collars, seventy quarter cloths, &c.; fifty substantial and well-built gravel and rubbish carts, in good condition; two wheelbarrows; stable utensils; roundsmen's brooms, and a variety of articles in use, and reserve stock requisite to be kept in connection with this part of the Corporation work. For full particulars, as catalogues, to be obtained at the Repository, on and after MONDAY next, or post-free on application. Messrs. B. and H. beg to call the especial attention of railway companies, persons engaged in public works, and others requiring first-class cart horses, to this stock, having been selected from the most eminent breeders in Belgium, expressly for the Corporation from the great care and judgment that has been given in their selection, they cannot fail to give satisfaction to purchasers. Will be on view at the Repository from the TUESDAY prior until the day of sale. The sale of horses and harness will take place on THURSDAY, the 19th, and the remaining part of the stock on FRIDAY and SATURDAY, the 20th and 21st inst.

TOTTENHAM.—Stock in Trade of a Wheelwright, New Haverhill, Oak and Ash Timber, six tons of Iron, Tools, and Effects of the late Mr. John Tatem, also, the Goodwill of the old established Business by

MR. RICHARDS, on the PREMISES, near Tottenham High Cross, on THURSDAY, JULY 12, at TWELVE o'clock, comprising a quantity of oak and ash timber, seasoned planks, carriage and cart bodies, tilt frames, iron axles, wheels, new van and cart bodies, track, wheeled arrows, iron flat form, four sacks, forge bellows, standard vices, quantity of nuts and bolts, patent tackle, iron and crowbar chain, weighing machines, set tons of new and old iron, erection of sheds, &c.; also, a nearly new Albert Dennet light van and a variety of effects.—On view the morning of Sale; catalogues on the Premises, and of the Auctioneer, Tottenham.

Third Portion of the valuable Mansion and Park of the Islington Cattle-market, comprising the Boundary Walls, 2,200 feet run; Public-house, Dwelling-house, and extensive range of Stabling, 750 lineal feet of Granite Kerbing, Lead, and Effects, by

MESSRS. RICHARDS, on the PREMISES, in lots, to be taken down by the purchasers, on TUESDAY, JULY 17, at TWELVE o'clock; comprising about 60 excellent stock BRICKS, forty squares of planing, sound timber in roofs, floors, and partial flooring, battens, joists, and timbers in dem fittings, stoves, pumps, stall divisions racks, mangers, stable doors, fencing, stone coping, pantiles, and a variety of materials useful for immediate and morning of sale. Catalogues obtained of GEO. LAKE, Esq. Solicitor, 19, Lincoln's-Inn-fields; and of the Auctioneer, Tottenham.

LONDON: Printed by CHARLES WYMAN, of 14, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Bros.) & WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 7, 1855.

BARRACK WORKS, DOVER.—Quantities of the above works may be had in due time of Mr. WRIGHT, Surveyor, Coventry. Mr. Wright will be at Dover during the time the plans are open.

COMPETITIONS.

TESTIMONIAL to the late Lord FITZGIBBON.—The Committee of the Fund, raised for the Erection of a Testimonial to the late Viscount Fitzgibbon, and his gallant Companions-in-Arms, who so nobly fell in the glorious Light Cavalry Charge at Balaklava, are desirous of receiving DESIGNS for a suitable WORK, commemorative of their gallantry and devotion to their country.

The proposed site is in the centre of the Crescent, in the City of Limerick, and is 75 feet in width, to the flagway at either side. A space of about 50 feet, in circumference can be allocated for the purpose, but within which must be included the railing or enclosure.

The entire expense of the testimonial (including the railing and pedestal) completed in all respects, and placed on the proposed site, is not to exceed a sum of 800*l*. A prize of 10 guineas will be given by the Committee for the design (with specification) of which they may approve, and which must be sent in on or before the 1st of AUGUST next.

Reference to be made to HENRY O'SHEE, Esq. Mayor of Limerick.

TO ARCHITECTS.

PLANS of BARRACKS.—The Committee appointed by the Minister of War to consider the question of Barrack Accommodation for the Army, have to inform all architects who may be desirous of competing for the prizes offered for the best plans of Infantry and Cavalry Barracks, that in consequence of the very numerous applications received from architects, requesting an extension of the time given for the preparation of the plans, the Committee have agreed to DEFER the following one month for the due performance of the contract. Tenders for the above works to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Ordnance Works at Dover Castle."

Reference to be made to HENRY O'SHEE, Esq. Mayor of Limerick.

TO ARCHITECTS.

PLANS of BARRACKS.—The Committee appointed by the Minister of War to consider the question of Barrack Accommodation for the Army, have to inform all architects who may be desirous of competing for the prizes offered for the best plans of Infantry and Cavalry Barracks, that in consequence of the very numerous applications received from architects, requesting an extension of the time given for the preparation of the plans, the Committee have agreed to DEFER the following one month for the due performance of the contract. Tenders for the above works to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Ordnance Works at Dover Castle."

NB The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 4th, 1855.

Royal Engineer Office, Chatham, July 11, 1855.

TO CONTRACTORS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 30th day of JULY, 1855, from persons desirous of CONTRACTING for ERECTING ABLUTION and BATH ROOMS, &c. at the Victoria Hospital, Fort Pitt, near Chatham.—Plans and specifications of the work are to be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 24th of JULY.—Sundays excepted. The person whose Tender may be accepted will be required to enter into a bond, with two eligible securities, jointly and severally, to be bound under a penalty of 200*l*. for the due performance of the contract. Tenders to be addressed to the Secretary, Ordnance Office, Pall mall, London, and to be delivered at the Guard-room, "Tender for Works at Chatham" No Tender can be admitted after the sixth day of JULY, 1855. The Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

ORDNANCE CONTRACT.—Notice to IRONMONGERS and BUILDERS.—TENDERS, sealed and addressed to the Secretary to the Ordnance, will be received at the Ordnance Office, Pall mall, London, on or before WEDNESDAY, the 25th JULY instant, for the CONSTRUCTION and ERECTION of THIRTY-EIGHT IRON BUILDINGS, for Quarter-master's Stores, at the temporary barracks, Aldershot, within ten weeks from the date of the notification of the acceptance of the Tender. Plans of the same may be seen, and specifications and forms of Tender obtained on application at the Royal Engineer's Office, Aldershot. Tenders to be endorsed "Tender for Quartermaster's Stores at Aldershot."

NOTICE to BUILDERS.—BARRACK WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that the WORKS proposed for ENCREASING the BARRACK ACCOMMODATION at the WESTERN HEIGHTS, DOVER, are POSTPONED, except that portion of them which provides for building a non-commissioned officers' and soldiers' privy, the plans and specification for which can be obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 16th of JULY to the 31st of JULY, Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 25*l*. for the due performance of the contract. Tenders for the above work are to be addressed to the Inspector General of Fortifications, Pall mall, London, and endorsed "Tender for Building a Privy at the Western Heights, Dover."

NB The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 9, 1855.

TO BUILDERS.

TENDERS are required for the ERECTION of SCHOOLS and TEACHER'S RESIDENCE, for the District of St. Matthias, Bristol, to be built on the Weir, adjacent to the Church of St. Matthias. The plans and specifications will remain at the vestry-room of the Church from MONDAY, the 9th, till WEDNESDAY, the 18th inst., in which latter day the estimates are to be forwarded to the Architect, Mr. NORTON, 34, Old Broad-street, London.—Further information may be obtained on application to the incumbent, the Rev. ADAM CLARKE, Rectory, or of the Architect.

TO PAINTERS AND OTHERS.

Ten cross and two segment sewers for vertical Plans, &c." to be sent in her case to reach me before the 23rd instant. The Board do not bind themself to accept the lowest or any Tender, nor will any allowance be made for estimates. CHARLES OLDROYD

Clerk to the said Local Board of Health.

Dewsbury, 5th July, 1855.

CONTRACTS.

TO CONTRACTORS.—The Local Board of Health for the District of Dewsbury, is prepared to receive TENDERS for the EXECUTION of the following WORKS, namely:—

CONTRACT No. 3.—For EXCAVATING and LAYING DOWN about 2,000 YARDS of WATERTIGHT CONDUIT, known as the Watertight Conduit and Inverted Syphon, between the termination of Contract No. 2, near Bradstone Dike, in the township of Foulstone, in the parish of Kirkburton, in the county of York, and the village of Shelley, in the same parish.

CONTRACT No. 4.—For EXCAVATING and LAYING DOWN about 3,000 YARDS of WATERTIGHT CONDUIT, known as the termination of Contract No. 3 and the boundary fence between the townships of Whitley Lower and Thornhill both in the county of York.

Plans and sections of the above works may be seen at the Offices of Messrs. MORGAN and HOUSE, Westgate, Huddersfield, and at the Office of the undersigned, and copies of the specifications and quantities may be obtained there at one Guinea each, on payment of such charges each to be returned on the same being delivered. Tenders, sealed and endorsed, "Tenders for Conduit Contract No. 3," or "Tenders for Conduit Contract No. 4," as the case may be, to be sent under cover to me on or before the 31st instant. The Board does not bind itself to accept the lowest or any Tender, nor will any allowance be made for estimates.

CHARLES OLDROYD,
Clerk to the said Local Board of Health.

Dewsbury, July 5, 1855.

CITY of COVENTRY.—To IRONFOUNDERS and OTHERS.—Persons willing to contract for supplying the Coventry Local Board of Health with CAST-IRON TUBES to be laid in connection with the Branch Sewers crossing under the Watercourses are requested to send sealed TENDERS, endorsed "Tenders for Cast-iron Pipes," to the Office of the Town Clerk at or before TEN o'clock on MONDAY, the 23d day of JULY instant. Plans and specifications may be seen at the Office of Mr. WILLIAM ROBINSON, Civil Engineer, Bank Chamber, High-street, Coventry, on and after WEDNESDAY, the 11th day of JULY instant, between the hours of ELEVEN a.m. and ONE p.m. The Board do not pledge themselves to accept the lowest or any Tender.

By order of the Local Board of Health,
THOMAS BALL TROUGHTON,
Town Clerk.

Coventry, 5th July, 1855.

PARTIES willing to do the PLASTERING of several HOUSES, and take a carcase as part payment, can have the particulars, by applying at No. 15, Marsden terrace, Maiden road, Haverstock-hill.

ST. MARYLEBONE WORKHOUSE.—To CARPENTERS, BUILDERS, &c.—Notice is hereby given that the Directors and Guardians of the Poor of the parish of St. Marylebone in the county of Middlesex, will meet in the BOARD-ROOM of the Workhouse of the said parish, on FRIDAY, the 27th day of JULY, 1855, at ELEVEN o'clock in the forenoon, to receive TENDERS for or persons willing to Contract for the FORMATION of a NEW FLOOR in the Laundry of the said Workhouse. Further particulars may be known, and a specification seen on application to the Surveyor, Mr. ROBERT SCOTT, at his daily attendance at the Court House, Marylebone, from TWELVE to ONE o'clock. The Board do not pledge themselves to accept the lowest or either of the Tenders; and they must be sent in, addressed to the Board of Guardians of the Workhouse, and endorsed, "Tender for Laundry," on or before the day preceding the day above mentioned.

By order,
THOMAS B. RAE, Secretary.

Secretary's Office, July 6, 1855.

TO DRAIN-PIPE MANUFACTURERS, CONTRACTORS, and OTHERS TO BE SOLD by PRIVATE CONTRACT, the Lease of the Assignees of Mr. James Harris, important LEASEHOLD PREMISES, at Charlton, within five minutes' walk of the railway station, and most conveniently situate for the Thames, and the Kent and Greenwich railways, with depôts and railway. There is frontage of 300 feet near the river, with landing stage, a substantial brick building enclosing four spacious kilns, a drain-pipe manufactory, standing, workshops, and every convenience with land in the rear, comprising about three acres. The plant can be taken at a valuation, rendering the premises ready for immediate work.—For further particulars apply to WILSON and ST. QUINTIN, Auctioneers, 28, Royal Exchange.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a SCHOOL-HOUSE at Newcastle-under-Lyme to contain 400 children, with RESIDENCE attached may see the plans and specification at the Architect's Office, Stoke Ville, Stoke-upon-Trent. Tenders, sealed and endorsed, to be sent in on or before WEDNESDAY, the 25th inst. The lowest Tender will not necessarily be accepted.

JAMES TRUESHAW, Architect.

Stoke Ville, Stoke-upon-Trent, July 14th, 1855.

TO BUILDERS

WOLVESNEWTON CHURCH, near Raglan, Monmouthshire.—Builders are invited to submit TENDERS for the RESTORATION and PARTIAL REBUILDING of this CHURCH. The plans and specification may be inspected at the Rectory, Wolvesnewton, from WEDNESDAY, the 18th, to SATURDAY, the 28th instant, when the Tenders are to be sent in to the Rector, the Rev. DAVID JONES, M.A. NORTON, the Architect, of 28, Old Bond-street, London, will furnish any information required by Builders wishing to submit Tenders for the work.

TO BUILDERS

GLOUCESTER CORN EXCHANGE and MARKET-RATE ROOMS.—The Corporation of Gloucester are desirous of receiving TENDERS in one contract, for the ERECTION of the above BUILDING, in accordance with the plans, specifications, and quantities prepared by Messrs MEDLAND and MABERLY, Architects, Gloucester, which may be seen at their Offices, on and after the 16th of JULY. Tenders to be delivered free of charge before TWELVE o'clock on WEDNESDAY, the 1st day of AUGUST, addressed to the Town Clerk, and sealed and endorsed, "Tender for Gloucester Corn Exchange and Market Rooms." The contract will be taken out by a competent Surveyor. The Corporation will not be bound to accept the lowest or any Tender, and the amount to be named in figures to them.

Gloucester, July 13, 1855. A. H. JENKINS, Town Clerk.

LYNN PUBLIC BATHS.—Persons desirous of CONTRACTING for the several works required in the ERECTION of PUBLIC BATHS for the town of Lynn, to be supplied with salt and fresh water, may see the plans and specification at the Offices of Messrs. COLTON and BELOE on and after MONDAY, the 9th day of JULY instant, where sealed Tenders will be received up to ELEVEN o'clock on MONDAY, the 23rd day of JULY, endorsed "Tenders for Public Baths for Lynn." The Council are not pledged themselves to accept the lowest or any Tender. For further particulars apply to Mr. THOMAS OLIVER, Jun. Architect, Sunderland; or to Messrs. COLTON and BELOE, Solicitors, Lynn.

Lynn, 9th July, 1855.

TO BUILDERS.

PARTIES desirous of CONTRACTING for the ERECTION of a VILLA RESIDENCE, at Oulton, near Stone, in the county of Stafford, may inspect the plans and specification at their Office, from MONDAY the 9th, to SATURDAY, the 28th of JULY, when the tenders are to be delivered to us, properly endorsed. The lowest Tender not necessarily accepted, and proper sureties required.

WARD and SON, Architects.

Albion-street, Hanley, Staffordshire, 9th July, 1855.

N.B. Oulton is about a mile from Stone, which is a first-class station of the North Staffordshire Railway.

SHREWSBURY PUBLIC CEMETERY.—TO BUILDERS.—The Burial Board of the Borough of Shrewsbury hereby give Notice that they are prepared to enter into a CONTRACT or CONTRACTS for BUILDING the necessary CHAPELS, LODGES, and ENTRANCE GATES, required at the Cemetery Ground, in the parish of Meole Brace, Shrewsbury. Persons willing to undertake such contract or contracts are therefore requested to send proposals in writing to me, at the Guildhall, Shrewsbury, on or before the 26th of JULY, sealed up and endorsed, "Proposals for Cemetery Buildings." Specifications and plans of the work may be seen at my Office on and after MONDAY, the 2nd of JULY next.

J. J. PEELE, Clerk to the Burial Board.

Guildhall, Shrewsbury, June 19, 1855.

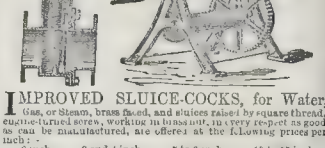
By order,
GEO. BABB, Clerk to the Board.

Great Grimsby, July 10, 1855.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Wagon Boilers, and upon Ovens. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Oil Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.



Ten furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FREDERICKS, BRothers, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 35, High Holborn.

IMPROVED SLUICE-COCKS, for Water, Gas, or Steam, brass faced, and sluices raised by square thread, engine-turned screw, working in brass nut, in every respect as good as can be manufactured, are offered at the following prices per inch:—

2-inch.	3 and 4 inch.	5 to 9-in h.	10 to 15 inch.
10s.	8s.	7s.	6s.

Lithographs of the improved self-lubricating and various other construction, with descriptions and prices attached, may be had on application.

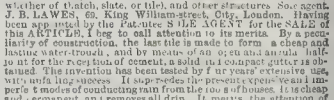
Single purchase Builders' Cranks, above, title 1 with two handles, 2 and 4 with iron braces and spindles, with set to throw in and out of gear.

Price	7s. each.
Stronger and larger ditto	6l. 10s. do.
Double purchase	8l. 8s. do.
Treble purchase	12l. 12s. do.

BARRETT, EXALL, and ANDREWS, Kate's Grove Iron-works, Reading. Agents in London, DRAY and CO. Swan lane.

PUMPING MACHINERY for AUSTRALIA, INDIA, CEYLON, SOUTH AMERICA, MEXICO, the CONTINENT, &c.—All persons desirous of RAISING large or small quantities of WATER, for works of drainage or irrigation, dry docks, canals, coffer-dams, water-works, &c. by horse, wind, or steam power, should SEE GWYNNE and CO.'S PATENTED MACHINERY for the purposes, being the most economical efficient, simple, and durable ever brought before the public Hydraulic Rams, Water-wheel, Steam-engines portable and fixed, with every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand, London.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES are undoubting and unrivalled with all the improvements, under their Quadruple Patents of 1839, 51, 54, and 1855, including the Gunpowder Proof Soft Lock and Door (without which no safe is secure).



THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.

MILNER'S PHŒNIX 212° SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 47, Moorgate street, City.—Circulars free by post.

GASHOLDER and CAST-IRON TANK FOR SALE TO BE SOLD, a GASHOLDER 132 feet 4 inches diameter, by 12 feet 9 inches deep; and CAST-IRON TANK, 40 feet, four metal columns, pulleys, and counter weights.—The above may be seen at the Monkwearmouth Works of the Sunderland Corporation Gas Company, and further information obtained on application to the undersigned, by whom offers in writing will be received until JULY 31.

JOHN H. COX, Secretary.

61, Fawcett-street, Sunderland, June 29, 1855.

BEADON'S PATENT EAVES GUTTER TILES, for ROOFS of HOUSES either old or new, whether of Thatch, slate, or tile, and other structures. Soc agent, J. B. LAWES, 23, King William-street, City, London. Having been appointed by the Patentee SOLE AGENT for the SALE of this ARTICLE, I beg to call attention to its merits. By a peculiarity of construction, the last tile is made to form a cheap and lasting water-trough, and by means of an open and annular hollow at the reception of cement, a solid and compact gutter is obtained. The invention has been tested by four years' extensive use, with only a few excess. It supersedes the present expensive and imperfect modes of conducting rain from the roofs of houses, to the cheap and permanent, and removes all drip. It meets the attention of the landlord, the agriculturist, the owner of house property, the philanthropist, and the economist. Delivered free on rail or canal at the works, Yeverett, near Rugby; or in London, Gloucester, or Bridgwater.

Price 4d. per Tile, of about 13 inches long. Stop-ends and Outlets, 9d.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"18, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir,—The Air Warmer continues to work very satisfactorily indeed, with regard to the warm body of the house, and during this weather is of immense value in the painting room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed. I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield

"Stanhope lodge, St John's wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had no rest, from time to time, to various and all other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and have had that temperature completely under control which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learned its proper management in a few days with no difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily avowing its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr J. Jobson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM HUTSON, Esq.

"Notley Wake, Thrapston, 15th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an uninhabited and unfurnished house, with all the doors open day and night, it is keeping up a very genial influence over the temperature even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 18s. 9d. per ton, the rate at which it has been burning for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM HUTSON.

"Messrs. Stuart and Smith

"P.S.—Mr. Hutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 8d. for coke—say about 5d. per day."

EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glossop-road, February 27th 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the last ever, from the comfort it has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase and passages, being a reserv oir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds my children have had the general run of the house without the fear of a relapse. To many invalids the invention will prove unreliable giving them the freedom of their invalid-room instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours.

"Mr. Jobson Smith." "EDWARD MARTIN.

E. F. SANDERSON, Esq.

"West-street, Sheffield, 27th March, 1855.

"Gentlemen.—The Gill Air Warmer you put up for me last year at Eastcliffe, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been peculiarly sensitive of the damp and chilly air of this country, but by the happy effects of your Air Warmer the house has been kept at a most agreeable temperature by a coal fire of ordinary size, warm, free air. This excellent apparatus must be invaluable to invalids and delicate persons. I am accordingly offering my testimony in approbation of its effective plan of rendering dwelling-house as most equally comfortable in point of temperature.—I am, yours very truly,

"Messrs Stuart and Smith, Roscoe-place." "E. F. SANDERSON.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

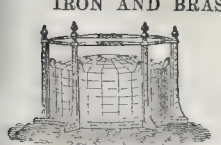
Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

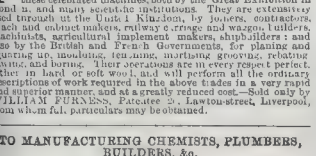
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.



These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

SASH AND MOULDING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used through at the United Kingdom, by joiners, contractors, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders: and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring. Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.—Sold only by WILLIAM FURNESS, Patentee 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Debrock's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c. The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tap, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Long-acre, London

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS

Messrs. HOBBS, ASHLEY, and Co. are now manufacturing their celebrated American and English Locks, on the premises, 97, Cheapside, and 44, Lawrence-lane, London, where, by the introduction of their patent steam machinery they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNER'S PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the strongest Safeguards against Fire and Robbery; they are made of any dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and Co. Wholesale and Retail Warehouses, 97, Cheapside, and 44, Lawrence lane, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOODBYER at the Great Exhibition, 1851, who invites the attention of Builders, &c. to his stock of Ironmongery, Brass Founding, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent-sliding Spindles, Dr Arnott's Vent-lator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each

J. H. BOODBYER, late STURCH and BOODBYER, established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

13, Stanhope-street, Clare-market, London

No. 1081, Class 9, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

CHUBB'S LOCKS & FIREPROOF SAFES.

UNEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,

"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY,

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements: Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields Wolverhampton.

168, DRURY-LANE, and CHARLES STREET.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES,

a complete LIST of which will be forwarded upon application.

FREDERICK BLYTH,

Nail Manufacturer and General Factor,

Nail Manufacturer and General Factor, BIRMINGHAM; or at 16, Gresham-street, LONDON.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No.	4	5	6
	5s. 4d.	6s. 6d.	8s. 9s. 9l per gross.

At JOHN TOUNGS, Birmingham and Wolverhampton, Agent, Factor, and General Furnisher, 15, Blandford-street, Manchester-square, from out of Baker-street, Portman-square. Every other article equally reasonable.

SKAIFE'S GALVANIZING WORKS,
Commercial-road, Limehouse, London.
Skaife's process is the most effectual preventive against rust, and is extensively used for all purposes where Iron not liable to rust is required.
Patent Galvanized Iron supplied in every form.
Sheets plain and corrugated. Roofs fixed complete.
J. Skaife is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, Plumbic Zinc, and Tiles.
An Allowance to the Trade.

LIVERPOOL and MANCHESTER PATENT GALVANIZED IRON WORKS.—FRANCIS MORTON and CO.—Galvanized Sheet Iron of the best quality; ditto, expressly prepared for Tinmen and Braziers. Corrugated Sheets, Painted or Galvanized, of all sizes, for Roofing. Fire-proof Partitions, Ceilings, &c. always kept in Stock. Gas and Water Tubing, Rain-water Gutters and Pipes; Wire of all numbers; Nails, Screws, Spikes, Hoops, &c.; Wrought Iron Hurdles. Field Gates, &c.—An allowance to Shippers and the Trade.—Head Offices, 13, James-street (late Coalbrookdale Company's Premises), Liverpool, and at 18, St. Mary's-gate, Manchester.
N.B. Parties are particularly requested to note the address, LIVERPOOL.

A. MOREWOOD and CO. (late Morewood and Rogers),
Dowgate Dock, Upper Thames-street, London, and Baskerville Works, Birmingham
PATENT GALVANIZED TINNED IRON, and GALVANIZED IRON, in Sheets.
PLAIN or CORRUGATED, and Curved, of all Gauges
Manufactured articles always kept in stock, such as pails, scoops, bowls, riddles, skips, &c. of all sizes.
Also the Patent Galvanized Tinned Iron Tiles, Gas and Water Tubing, Stamped and Moulded Gutters, Wire, Wire Netting, Hooping, Nails, Rivets, &c.
Estimates given for Roofs, and every description of Galvanized Building, at the
OFFICES and WAREHOUSE, DOWGATE DOCK, LONDON.

TO ARCHITECTS, BUILDERS, AND THE TRADE.
PATENT PLUMBIC ZINC.
GREAT REDUCTION IN PRICE.
PLUMBIC ZINC is a perfect combination of Lead and Zinc, and not requiring to be more than one-fourth or one-fifth as thick as Sheet Lead, is consequently very much cheaper than that material, and at the reduced price costs but little more than Sheet Zinc.

No. 11 gauge weighs about	18	oz. per foot super.	
12	"	20	"
13	"	24	"
14	"	28	"

Full particulars and the reduced price sent by post on application to
A. MOREWOOD and CO. DOWGATE-DOCK, LONDON, to whom all letters must be addressed.

TUPPER and CARR, Contractors and Manufacturers of all sorts of IRON ROOFING.

IRON ROOFS.
Patent Corrugated, Galvanized, and Painted, Wrought-iron, principal Glass and Slated Roofs, to any span.
Wrought and Cast-Iron Bridges, Girders, Fire-proof Floorings, Shutters, Doors, &c.
Engineers' and Builders' Castings of all kinds manufactured by JOHN WALKER,
Builder, Contractor, and Ironfounder, Mill-wall, Poplar.
Offices—Arthur-street West, London-bridge, where experienced draughtsmen are kept to furnish designs and estimates, which may be obtained on application.
N.B. Galvanized and painted Sheet-Iron, both plain and corrugated, supplied at the lowest possible prices, and a considerable allowance made to the trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

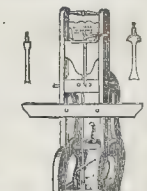
JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Iron Works, Millwall, London.
Offices: 12, Frenchurch-street, City.

PATENT GALVANIZING and CORRUGATING IRONWORKS. Improved Process. WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.
A Discount allowed to the Trade.

THE COTTAGERS' STOVES.
Testimonial.

"Lord Hardinge requests Messrs. BAILEY will be so good as to inform him how much he is in their debt for the stoves which they supplied to him. He is happy to inform them the stoves have proved VERY GOOD ones in the Camp before SEBASTOPOL.
Horse Guards, 26th Feb. 1855."
D. and E. BAILEY, Ironmongers, 573, Holborn. Price 30s.

ROYAL POLYTECHNIC GAS FIRE.—BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent street, London.



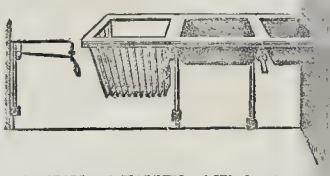
HEATING BY HOT WATER.
JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler only being daily in full operation, heating 5 buildings, measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND.
An Illustrated Catalogue on receipt of four postage-stamps.

ESTABLISHED 1817
WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peter-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest wholesale prices.
Cottage Ranges, with oven or boiler, complete, 22s. each.
Self-acting ditto, with ditto, from 33s.
Self-acting Oven and Boiler Ranges, with wrought fittings, brass top, &c. complete, from 45s. each.
Register Stoves, from 5d. per inch.
Elliptic ditto, with double backs, from 2½d. per inch.

Cast-iron Rain-pipe	2	2½	3 inch
	11d.	1s. 3d.	1s. 4d. per yard.
4-inch Eaves Gutters, 9d. per yard.			
	4	4½	5 inch.
O G Gutters	1s.	1s. 1d.	1s. 3d.	1s. 6d. per yard.
Best Cut Clasp and Rose	1½	2	2½	3 inch and larger.
	15s.	15s.	14s. 6d.	14s.

1-inch Best Cut Lath, 35s. 6d. per cwt.
Sheet Floor Brads, 13s. 6d. per cwt.
Hoop Floor Brads, 13s. per cwt.
Sash Weights, 7s. 6d. per cwt.; 9-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 9s. per doz.; strong Coal Plates, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.



MORTISING MACHINE. 12l. to 16l.

KIMBERLEY'S PATENT MORTISING MACHINE.
The Patentee feels justified in calling attention of all Builders, Cabinet makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are in daily use all over the kingdom, and references to any extent can be given to prove it really is what it is represented, viz. the most valuable tool ever offered to the trade.
Amongst testimonials of the highest character, he would respectfully invite attention to the following:—
"Rugby, June 14, 1855.
"Dear Sir,—In reply to your inquiry respecting the Patent Mortising Machine I purchased from you THREE YEARS AGO, I have to inform you I consider it a most SIMPLE, EXCELLENT, and DURABLE ARTICLE; nor do I think it saying more than it deserves when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principle and make, has totally deceived myself and all others, as it is always breaking, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I cheerfully assert that its use in my shop is of GREAT VALUE, as it must, indeed, be to every builder who possesses it.
"I am, Sir, yours faithfully,
"JOHN PARNELL."
London Agents: Messrs. PUGH and CO. 13, King-street, Snowhill, who keep Stock of all Kimberley's Patent Cords, Flooring Cramps, &c.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON House and Ship Builders, Joiners, Cabinetmakers, and others doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongers, Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a ton weight moving with three fingers as easily as a wicket or ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and super-or gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER-TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety, comfort to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.
THIS IS THE ORIGINAL PATENT

for important improvements in stable fittings, including a method surpassing all others for conveying the straps and halter-weights to the back of the fittings, to prevent the horse being cast in the stall. Stable Fittings of every description, enamelled or galvanized. All kinds of Stable Furniture in stock; Iron Hurdles, Gates, Feeding, &c. &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke-Curing Chimney-Cans,—200 on Buckingham-palace.—Price Lists sent on receipt of two postage-stamps.
JAMES BARTON, Iron Founder, &c. 370, Oxford-street, a few doors East of the Pantheon.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 189, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler

STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Bise-lane, London.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, anufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only tion of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and OW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS CESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

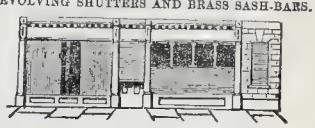
ROUGH PLATE-GLASS from ⅛ to ¼ in. thick, suitable for the windows and roofs of mills, mechanics' shops, market halls, railway stations, &c.

Beautiful and highly-finished POLISHED PLATE-GLASS, for shop-fronts and all superior glazing purposes, and for silvering.

Superior silvered Plate-glass Mirrors of all sizes.

WHOLESALE BRITISH and FOREIGN WINDOW GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of builders and the trade in general to his prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description. Good 15-oz Sheet Glass, in crates, from 21d. per foot; C C C Crown, 18 tables, 32s. per crate; Foreign Sheet Glass, in cases of 200 feet each, large sizes, 33s. 6d. and 40s. per case; Ground ditto, 3½d. per foot. Extra size sheet glass of all qualities for shop-fronts, &c.—Estimates and price-lists forwarded, post free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

GOOD FOREIGN SHEET-GLASS.—Thirds, 40s.; common thirds, 36s.; fourths, 28s.; in cases 200 feet each, average size, 40 by 30. English or foreign ground ditto, 3½d. per foot. Crown and sheet squares, in 100 feet boxes, from 14 by 10 to 22 by 14, 2½. per foot. 4 inch rough British plate tiles, 11s. per dozen. Also, crown and sheet glass in crates; British and patent plate, fluted, and stained glass; glass slates, &c. Sheet lead, pipe, white-lead, oils, turpentine, colours, &c.
G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.



E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 215, OXFORD-STREET.

PLATE-GLASS for GLAZING PURPOSES.
C. NOSOTTI respectfully informs Architects, Builders, and Others, that he can supply them with PLATE GLASS for windows and shop-fronts, at prices not to be excelled, the glass being of a more brilliant colour than generally used. Lists of prices free. Gold Mouldings for rooms, and every article required for general furnishing ready for immediate delivery.
C. NOSOTTI (Established 1823), 393 and 399, Oxford-street, Soho.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 295, Oxford-street.
REDUCED TARIFF.
CCC CROWN, 18 Tables, per crate, 30s.; H 15 oz. SHEET, 2d. per foot; FOREIGN SHEET, 200 feet cases, 34s. per case; CROWN or SHEET SQUARES, 1½ feet boxes, 3d. per foot; HARTLEY'S PATENT ROUGH PLATE, from 6-1 and PERFECTED VENTILATING GLASS, 1s 6d. per foot; CRYSTAL SHEET GLASS, 4d., 6d. and 8d. per foot; FLASHED RUBY, in GROUND SHEET, 3½d. ENAMELLED, 8d. per foot. Sashes primed and glazed, 3d. per foot.
Catalogues free, on application to the Managers, as above.

REVOLVING SHUTTERS AND BRASS SASH-BARS.

CLARK and CO. Engineers and Manufacturers of Patent Revolving Shutters, in iron and wood, at very reduced prices. Brass Sash Bars, Stall Board Plates drawn by machinery. Prospectuses forwarded post free.—CLARK and CO. 15, Gate-street, Lincoln's-inn-fields.

JAMES RHODES, No. 6, Macclesfield-street North, City-road, London, Manufacturer of Sashes, and Frames, Doors, &c. and every description of House Joinery. Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.—N.B. This is the cheapest manufactory in London, and well deserving the attention of all engaged in building

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs Lawrence, Shop-front Builder and Manufacturing Joiner. 1½ and 1¼ four-panel doors from 6s. each; 14 sashes and frames from 7d. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

DORKING, SURREY.—To BUILDERS, CARPENTERS, and CABINET-MAKERS.—TO BE LET, with immediate possession, in the thriving town of Dorking, an excellent BUSINESS in the above line, with every convenient and suitable premises for carrying on all extensive trade. The proprietor is relinquishing business through ill-health.—Apply to R. W. at Mr. T. Bowen's, *Surrey Standard* Office, Dorking.

TO PLUMBERS, GLASS-CUTTERS, &c.—TO BE DISPOSED OF, in one of the main roads to the City of London, a genuine concern in the above line; domestic affliction being the cause of leaving. Coming-in easy.—Further particulars can be obtained of the Lyne Glass Company, Bridewell Wharf, William-street.

PLUMBER'S, PAINTER'S, and GLAZIER'S BUSINESS TO BE DISPOSED OF, in consequence of the proprietor going abroad.—Apply, by letter only, to Mr. DORLING, 6, Osnaburgh-place, New-road.

TO ENGINEERS and OTHERS.—TO BE SOLD by PRIVATE CONTRACT, the valuable BUSINESS PREMISES, held under lease for 99 years, from the 24th of June, 1851, and the GOODWILL of the BUSINESS carried on at, and known as the West London Ironworks, Latimer-road, Notting-hill, by the side of the West London Railway, now in operation, and which connects the Great Western and London and North Western railways. The works consist of offices, stove-houses, fitting and tool shops, with good assortment of tools erecting shops and sheds, smiths' shop, pattern makers' shop, and pattern loft, engine and boilers, stable for two horses, large yard, with five-ton crane, the whole in good condition and repair. There is a good connection to the business, and there is a foundry next door. Further particulars may be obtained of, and Tenders made to Messrs. FREEBORN and WHITE, Solicitors, 13, Barge-yard Chambers, Bucklersbury, London, who will also give an order to view the premises if required.

The Builder.

VOL. XIII.—No. 649.

GUILDFORD (which speaks in its name of a trading company or guild, and a passage across a river) is thought by some to be the site of the much-disputed station, *Noviomagus;* so the Noviomagians, of whom our readers have before now incidentally heard, made it their meeting-place on the occasion of their last annual excursion into the country, to taste fresh air and hunt up antiquities. They themselves hold to Keston, in Kent, as the site of their Noviomagus; but, nevertheless, they went to Guildford,—ancient Guildford, mentioned even in the will of Alfred the Great,—to see its castle, its church of St. Mary, its crypts, quaint streets, and a neighbouring place or two.

Of the club and their doings we are not about to speak—a club half serious half social,—but it may be worth while to point out a pleasant trip, in pursuance of our plan; and it will be odd if we do not find on the road a suggestion or a fact calling for mention. The club in question,—

> "Love to see the dolphins play,
> Yet still they mind their compass and their way."

If we do not give the words of the quotation exactly they convey our meaning, and that will suffice.

Stopping at the Woking station, it is a short ride to *Sutton-place;* and if it be such a bright, clear, glowing day as this was, you will find plenty of variety, and feel how wholly colour depends on light. A field of buttercups; the tender greens of thickly-massed foliage, with the dark boughs of later trees just speckled with bursting leaves; here a brown bank, and there some red tiles, make up a picture brighter under such a sun than any palette can touch. It is easy to reproduce forms, but overwhelmingly difficult to paint light and air. It was a real summer's day, of which we speak: the cows had gathered under the trees, and, though not hot enough to make you desire, with Sydney Smith, "to take off your flesh and sit in your bones," would have amply justified the less extreme course of taking off your coat.

Sutton-place, mainly built about the year 1530, by the Westons, to whom Henry VIII. gave it, is a terra-cotta house, and therefore very noticeable: the mullions and transoms of the windows, the parapets, the ornamental panels, the cornices, and the turrets, are wholly of burnt clay, some red, some cream colour, strongly contrasted. The human figure, where it appears in some of the panels, is badly modelled, almost grotesque, but some of the ornaments—those, for example, running up the hollows of the mullions—are very elegant. R. W. and a tun or barrel, for Richard Weston, will be found in various positions. The bricks forming this house were brought from the Low Countries, it appears. The moulds are few, and the inquiry arises why we do not now do more with clay than is done. Many houses were erected in England about the time of Henry VIII. which display coats of arms, capitals, cornices, and parapets, of burnt earth, and where allowed to remain, these have endured well. Fronts of great durability and elegance might be produced readily in this material. As to colour, white, buff, yellow, blue, and red can be obtained; and if a glazing were applied, they could be washed clean without difficulty. Some idea of what could be done with moulded bricks may be gained from the Entrance to the station for the Woking Cemetery, in the Westminster-road,—a very good piece of brickwork, though wanting in free art. The improvement effected in tiles, thanks to Mr. Minton especially, is very great, and will, doubtless, lead gradually to an extended use of them. This species of decoration was anciently held in high esteem, and regarded as a mark of wealth in the possessors, whence, says Mr. Marryat, in his volume on Pottery, arose the old Spanish proverb, "He will never have a house adorned with glazed tiles" (*nunca hará casa con azulejos*), that is, he will never thrive, or be a rich man.

There is a large hall at Sutton-place, perhaps 50 feet long, with remnants of stained glass—some curious; and the dining-room is hung with the stamped leather, coloured and gilt, which was used extensively in the sixteenth and seventeenth centuries. These hangings were known as *tapisseries de cuir-doré.* Some were formed in moulds, the leather having been first softened by boiling; others were produced by hand-labour and at considerable cost. Leather in another shape was used for hangings much earlier than the date just now mentioned. On the walls of the staircases a number of mostly very bad pictures are stacked up; and in one of the upper rooms will be found some designs, signed "Joseph Bonomi, architect, 1789," for the restoration and completion of the building.

The kitchen garden is enclosed symmetrically with a high wall, and has in one of the angles a piquant little octagon building for a tool-house, formed like the main building, of burnt clay. Even the old walls which surround a garden of this sort are full of suggestive objects for observation. "It is sometimes a good and consoling reflection," says Alphonse Karr, "to be in a well-secured enclosure, alone with perfumes, flowers, trees, the heavens, the air, the sun, stars, remembrances, and reveries, and to know that nobody can come and disturb you. I like walls, but I do not like white walls; I like nothing but old walls. I have one here, along which the course of my journey brings me, and which pleases me exceedingly. It is just as old as it ought to be: if it were a little older it would be given up to the mercies of the bricklayers, who would introduce all sorts of new bricks or white stones. As it is, it is grey and black, and is covered with twenty species of mosses and lichens. In the crevices of its top extends an absolute crown of yellow wallflowers and ferns. At its foot vegetate pellitory and nettles, in all their beautiful green."*

On the road to Guildford, which is four miles off, Stoke Church may be viewed. It has been restored, and offers no special points for notice.

The keep of the castle at *Guildford* is an interesting ruin, apparently of the Norman period. "There is not," says Brayley, "the least degree of credible authority for the inferential deductions made by the late Mr. Edward King; namely, 'that this was one of the identical palaces and castles of the earliest Saxon kings;' "that Alfred the Great sometimes dwelt here; and afterwards, occasionally, his nephew, Æthelwald."† Domesday Book, although explicit as to the houses at Guildford, says nothing of a castle there, so that we may conclude it had not been erected at the time of the survey. There seems to be no mention of it in records earlier than 1216, but it was probably built at the end of the eleventh century, or beginning of the twelfth.

At the recent meeting of the Surrey Archæological Society, referred to in our last,‡ a resident member, Mr. Austen, adopted Mr. King's theory, mainly on the ground that the masonry displays what is known as herring-bone work. This, however, is as often found in Norman work as any other, and is not to be relied on as evidence of date. The entrance to the principal story of the castle from the outside, must have been approached by a lofty flight of steps, now destroyed or removed. It is at this time about 12 feet from the ground. In the thickness of the walls at the south-west angle, and running both west and south, is a curious apartment, which displays a Norman arcade, against the wall on one side, with short columns, the capitals of which are variously sculptured. There are some rude but not feelingless carvings, too, on the ashlar, ancient, if not contemporary.

St. Mary's church deserves particular notice for its plan. It consists of a nave and chancel, with a wide aisle on each side, and all the three divisions originally terminated at the east end, in a semicircular apse or *concha*, after the Byzantine mode. In Germany, Italy, and in France, buildings with several apses are not uncommon; but in England they are very rare. The central, and principal apse at St. Mary's was taken down some years ago to widen the street, and the chancel now has a square end; but the apses north and south remain, and offer much to interest. They appear to be of the twelfth century, if not earlier in part. Rickman seems to have missed the peculiarity of the plan, and describes the church simply as having "a tower at the west end of the chancel, and on the north side, a sort of north aisle, with a circular east end, and a western portion with a lower roof." The apse on the north side is separated from the rest of the aisle, and is known as the chapel of St. John the Baptist: it is vaulted with a semi-dome, the groins resting on corbels; and this vault displays a series of very curious drawings in circular and oval compartments, in reddish-brown outline, which have been described and figured in more than one publication. The running pattern on the soffit of the main arch, is Byzantine in character, and particularly elegant. Should the observer, when leaving the church, notice the enclosure prominently lettered in old English, "Church Maidens' Pew," he need not speculate on the office and probable position of these maidens, for there are none; they simply stand, through the error of the scribe, for "Wardens."

In St. Nicholas' Church there is a chapel containing memorials of the Mores of Loseley-place, situated just out of Guildford, and made famous by the curious MSS. which were there preserved.

We will not stop to say anything of the crypt at the Angel Inn, interesting as it is; or the seventeenth-century Townhall, with its projecting clock and curious chimney-piece; or Abbot's Hospital and its stained glass; but will hasten at once to this Loseley Manor House, its hall, Elizabethan ceilings, and delicious gardens, resting, nevertheless, a few minutes to see an appendage to the church of St. Nicholas, the ruins of St. Katherine's Chapel, on the hill. This chapel was rebuilt in 1317, by Richard de Wauncey, ancestor of one not unknown to some antiquaries of the present day. This De Wauncey obtained a charter for an annual fair here, which is still held. Turner once painted it.

The hill on which the chapel stands rises abruptly from the river Wey,—the river which Pope calls

> "—— Chalky Wey, that rolls a milky wave,"

and it commands some pleasant views.

Well, at last we are at *Loseley*. There was a

---

* "A Tour round my Garden." Routledge.

† History of Surrey. p. 319.

‡ The short notice of the meeting of the Surrey Archæological Society, which appeared in our last number, has given great umbrage to the honorary secretary. Mr Webb, and has led him to address to us several, what we are forced to term, very impertinent letters. If the notice in question had been worded from the secretary's own vocabulary, comprising "absurd," "silly," "offensive," "misrepresentation," "bad feeling," and "want of good taste," it would have taken a very different shape, and might have afforded an excuse for his language. But for a childish threat to evoke "the assistance of numerous friends in the London and county press" with which he concludes, we should, nevertheless, have made no further allusion to the matter. We have no "hostility" towards the society, very far from it, as our pages have shown, but we have, nevertheless, a duty to perform, and will perform it. The fact is, archæology, so called, is being overdone, and if care be not taken, the title of archæologist will come to be one of derision, if not of contempt.

moated house here once, and the moat remains to some extent, though the house has changed its character. William More, who was knighted in 1576, by Dudley, Earl of Leicester, began to build it in 1562, and the structure is what might be looked for as the work of that time,—Gothic in the general arrangement and character, but with Italian forms creeping in. There is a large hall with an oriel: some of the ceilings are good specimens of Elizabethan work, and in the drawing-room there is an elaborately carved Italianized chimney-piece, formed out of a hard kind of chalk, and which is very little injured. In the cornice here, and elsewhere about the house, is the punning motto of the Mores,—"*Morus tarde Moriens—Morum cito Moriturum,*" intersected by a mulberry-tree,—a poor conceit, and not very clear.* The use of mottoes about the buildings of this period, is a pleasant and useful characteristic, giving the mind food for thought:—

> "Lull'd in the countless chambers of the brain,
> Our thoughts are link'd by many a hidden chain.
> Awake but one, and lo! what myriads rise!
> Each stamps its image as the other flies!"—*Rogers.*

Some of the pictures at Loseley are interesting, particularly a triptych of the end of the fifteenth or beginning of the sixteenth century, the Presentation of Christ in the Temple. This is a very fine work; parts of it, on the right-hand leaf, indeed, are exquisitely beautiful.

Queen Elizabeth visited this house more than once, and there are some curious letters amongst the Loseley MSS. from Sir Christopher Hatton, advertising Sir William More of the Queen's coming, so that he might keep his house "Sweete and cleane, to receave her Hygnes whensoever she shalbe pleased to see it."

The grounds are very charming. Coming out of the hall there is on the right hand a wall of trees of wonderful height. "God Almighty," wrote Bacon, "first planted a garden; and, indeed, it is the purest of human pleasures; it is the greatest refreshment to the spirits of man; without which buildings and palaces are but gross handy-works." So thought those who built this and other houses of the period, and so think we.

* It is considered as implying, "that the family stock, like the mulberry-tree, should be of long endurance, but that its individual descendants, like the fruit, should, by the common lot of mortality, be subject to speedy decay."—*Kempe, as quoted by Brayley.*

PRACTICAL OBSERVATIONS ON PILE DRIVING.

PILED foundations are most advantageously employed when the solid ground, over which it is proposed to erect any important edifice, is situated at so great a depth from the surface that the removal of the softer and sometimes unequally compressible intermediate strata would be attended with excessive delay, difficulty, or expense; or when there is any probability that either the intermediate materials, or the substratum on which they rest, may be displaced by land springs forcing their way under the foundations.

Piles are usually formed of round or squared timber, and are driven into the ground in a vertical direction, or in one corresponding with, and parallel to, the resultant of the forces they are intended to resist. Of late years, however, both cast and wrought iron have been used instead of wood, in some situations with remarkable success. But in salt or brackish water a chemical action upon the metals takes place, which renders their application very questionable, even if it should not be considered to justify their total exclusion in positions of this description, in which engineers are compelled to use wood, notwithstanding the danger to which it is exposed from the attacks of the boring worms.

The kinds of timber most frequently used in England for piles, are beech, elm, Scotch or English larch, Baltic fir, the American rock elm, live oak, the green heart, or the sabacu, from Guiana. The two last named are said to resist the attacks of the borers, but we have hardly sufficient practical experience in this respect to justify implicit belief in their superior value. It is, therefore, very desirable that authentic observations should be made upon their durability in waters where the above-named destructive worms occasion the greatest injury. On the continent, beech timber is principally used for piling, and a prejudice appears to exist against the family of the firs: round timber is also preferred for detached piles to timber which has been tool-dressed: indeed, Perronet says expressly, that "such piles ought not to be squared;" but, he adds, "they must be straight in the grain, and without projecting knots." In England, the choice of the particular description of wood appears to be regulated by the nature of the ground into which the piles are to be driven; or by considerations connected with the local markets. Amongst workmen, piles of American wood are generally known by the name of "*hard wood piles;*" and those of European are called "*soft wood piles.*"

The preference of any particular description of wood for pile driving, it appears to me, should depend more upon its durability, and immunity from attack by either organic or inorganic causes, than upon its original cost. Beech timber decays very rapidly when exposed to alternations of dryness and humidity: elm resists such exposure more satisfactorily: fir, when free from sap, lasts longer still under such circumstances; but, of course, all woods decay with greater or less rapidity in positions where they are exposed to these alternations; and the only methods which appear to have successfully solved the problem of increasing their durability are those of Kyanizing, or of creosoting. It has been stated that the injection of the ingredients employed in the application of both these methods renders the wood sufficiently distasteful to the boring worms to insure immunity from their attacks.

According to their position in a foundation, piles are distinguished by the following names:—1. *Gauge piles,* driven to define the limits of the ground to be enclosed, or to act as guides in driving the other piles. 2. *Close piles,* driven between the gauge piles, to form a continuous enclosure of wood-work. 3. When the close piles, instead of being of the same scantling as the gauge piles are only of half timber, they are generally known by the name of *sheet piles.* The several descriptions are connected together by *wales* or horizontal ties; by cross braces; and in some cases by a platform, which is either entirely close, or formed as an open grating. The entry of the piles into the ground is facilitated by their being cut to a sharp pyramidal end, generally shod with iron, either cast or wrought: in sheet piling, however, the various pieces of wood have often a sharp edge, parallel to the face of the enclosure. Wrought-iron hoops are generally used to prevent the heads from splitting in driving, or from becoming too much compressed. In some cases, piles are driven with the broadest end downwards, as for example, in foundations executed upon extraordinary depths of compressible mud; and Perronet appears to consider that there is some advantage in adopting this system when the middle of the height of the piles is situated at nearly the mean level of the water, a condition which sometimes occurs in the erection of large timber bridges. From some experiments made at L'Orient, recorded in Sganzin's Cours de Construction, it appears that piles so driven offer a resistance equal to about 45½ lbs. per foot superficial of their frictional surface, which is barely a fifth of the resistance they would offer if driven to a solid stratum. It is important to drive the piles, if this mode of placing them with the broad end downwards be adopted, by beginning with the outer rows, and working inwards towards the centre of the mass.

When piles are used in solid ground, and are designed to resist a vertical pressure, they are driven by means of engines until what is called a *refusal* is attained; that is to say, until they only descend a certain depth under an impulse, which is made to vary with the nature of the superstructure, the number of the piles employed, or the machinery used for driving: but when the piles are intended to resist a transverse strain, or any tendency of the foundations to lateral displacement, they must be driven until they attain a solid substratum, without reference to the resistance they may meet with in their descent. It is considered by some engineers, that the ground around the piles becomes so compressed in the former case that an adequate resistance in the foundations is secured, even when the piles are not driven to the more solid strata. In the latter case, the piles become fixed in the materials through which they are driven, and can only move by being displaced horizontally, or by being broken off on the line of thrust.

Although the earth in which piles are driven contributes to their power of resistance to an insistant load, it is not customary to take it into account; and the number, as well as the distance apart, of the piles is calculated as though they had to support the load without any assistance. In other words, the weight which is brought upon each pile is calculated upon the supposition that it should be able to support such a weight in the air, without crushing. Under these circumstances, it is evidently necessary to diminish the weight upon any definite portion of the support in proportion as the height of the support itself is increased. Rondelet gives some tables of the weights which may be brought with safety upon the various descriptions of wood used for piles, according to their length; but it may suffice at present to observe, that when the length of the pile, supposed to be of oak, does not exceed sixteen times its diameter, it may be loaded permanently with a weight of from 430 to 500 lbs. per inch superficial of the sectional area, and the extreme refusal must be such as to ensure stability under such a load. There are few cases when the load above named may not be slightly exceeded; at any rate, it must be considered to be fairly within the limits of stability, although far in excess of the load usually applied.

The rules generally adopted for fixing the "refusal," appear to be empirical, and to require more elaborate investigation than they have hitherto received. It is customary on the continent to fix it upon the following principles. If each pile be intended to bear a weight of twenty-five tons, it is not considered to have attained its proper refusal until it will not descend more than two-fifths of an inch with a series of thirty blows from a ringing engine, with a monkey of 12 cwt. falling 4 feet; or with a series of ten blows from a common pile engine, with a monkey of the same weight falling 12 feet. If the weight to be brought upon each pile should be 12½ tons, the refusal is altered to four-fifths of an inch; and if it be only 5 tons, it is altered to 2 inches. But it must be evident, that the vibrations excited in the piles themselves, or in the ground, must differ so essentially under the conditions of the ringing engine with the small fall, from those which hold with the piling engine with the great fall; and the effects of the action and reaction developed under these respective circumstances must be so dissimilar, that no simple geometrical ratio can exist between the efforts exerted in the respective cases. At the bridge of Neuilly, where each pile supports a total weight of 52 tons, Perronet adopted the refusal of one-fifth of an inch for each series of twenty-five blows, with a fall of about 4 feet 8 inches.

The engines generally employed for the purpose of pile-driving are the ringing engine, the pile-driver, and Nasmyth's hammer. The first consists of a frame in which a monkey, or rammer, is raised vertically above the pile by means of a cord passing over a large wheel, and worked by a number of men standing around. As all intermediate machinery is avoided, the blows struck by this engine follow one another with tolerable rapidity, and may easily be carried to twenty or thirty per minute; but the weight raised is necessarily limited by the unfavourable mode in which the power is applied, and the fall is equally confined within a small range. In the ordinary pile engine, the monkey is raised to any desired height by means of a crab; so that the weight of the monkey and the height of the fall may be made to vary within very considerable limits; but the number of blows given within a definite period becomes diminished in the same proportion that the power of the engine increases. Of late years, the Americans, and many of our contractors after their example,

have applied steam power for working machinery of this description with considerable success. Nasmyth's hammer is, however, the most decidedly marked modification of pile-driving machines lately introduced, and when applied under the proper conditions, it appears likely to render great service. Dr. Potts' system, and the modifications it has lately received, appear to be more adapted to secure the descent of what may perhaps be correctly described as small caissons than of piles, as the word is usually understood. Attention is therefore called more exclusively to Nasmyth's hammer, as presenting the greatest advantages in certain situations.

It consists of a cylinder, in which a piston bearing a rod connected directly with the monkey, or striking mass, is made to move in one vertical direction by means of high-pressure steam, which escapes directly the piston reaches the head of the stroke, and allows the monkey to fall by the mere effect of gravity. The weight of the monkey need only be limited by the capacity of the cylinder or the elasticity of the steam; and accordingly in practice it varies from 32 to 45 cwt. The height of the fall is, however, limited by the stroke of the piston, and rarely exceeds 2 feet 6 inches. At the same time it is to be observed, that the number of blows is greatly increased beyond that which can be given by any hand gear; and instead of being from thirty-five to forty per hour, as in the case of the ordinary pile engine, it becomes from fifty to sixty per minute. The effect of each separate blow under these circumstances is naturally less with the Nasmyth's hammer than with the old engine; but the rapidity with which the blows succeed one another must considerably modify the descent of the piles, particularly in ground able to transmit undulations separated by long intervals. The whole question of the influence of the elasticity of the ground upon the rate and manner of descent is, however, still involved in too great uncertainty to admit of any definite conclusions on the subject; and, indeed, it is found to complicate not only the theoretical reasoning upon, but also the practical operations connected with pile driving to a very serious extent.

For instance, it has been frequently observed that after a pile has received a certain number of blows from an ordinary pile-engine, it will "refuse," or cease to drive. But if it be then allowed to rest, and after a definite period the driving be recommenced, the pile will descend rapidly under blows of far less power than those which were previously unable to move it. This phenomenon has been attributed by some authors to the increase of the reaction of the ground developed by an exaggerated "vis viva;" by others, to the fact that the pile itself, and the ground round it, assume a state of vibration, which, for the time, disperses the effort exercised on the head of the pile. Nearly all the investigations which have been made with respect to the transmission of movement in elastic media have been made upon the perfectly elastic gases; and they hardly bear upon the conditions likely to prevail in the denser, less homogeneous, and comparatively speaking nonelastic, materials into which piles are usually driven. But it appears at least more probable that the vibratory undulations produced by heavy blows succeeding one another at distinctly perceptible intervals, should, on their reflux, coincide and interfere with the transmission of a succeeding blow, than that the lighter blows following one another almost instantaneously should give rise to undulations of a character to check the descent of the pile. Indeed, in the latter case it is possible that the undulations, especially if they be reflected, would so far interfere with one another as to procure a comparative stillness of the ground.

The "refusal" to be adopted when Nasmyth's hammer is employed, may easily be calculated from those before given for ringing or for pile engines—assuming that the forces bear to one another a simple geometrical ratio. If a hammer of 34 cwt. be used with a fall of 2 feet 9 inches, a succession of seventeen blows would produce an effect presumed to be equal to that of thirty blows from a ringing engine of 12 cwt. with a 4-feet fall; or ten blows from a pile engine of 12 cwt. and a fall of 12 feet.

Theoretical observations were confirmed by some circumstances noticed by myself during the execution of the works for the repairs of the Blackwall entrance of the West-India Docks, in which I also had an opportunity of learning practically the conditions most unfavourable to the use of the steam pile hammer. In this instance the side wall of the river entrance to the Blackwall Basin was carried into the channel by a lateral movement of the ground, apparently produced by some copious land spring, or by the escape of the water retained in some of the inner basins at low tides. The old wall was carried bodily forward for a length of about 120 feet, in a kind of irregular curve, whose maximum versed sine was about 10 feet: it sank about 9 feet below its original level, and forced up the bed of the navigable channel nearly 3 feet. Mr. Rendel, who was consulted by the directors of the company, decided upon replacing the old wall by a timber staging. This was intended to be close planked at the back, on the land side, in order to retain the earthwork of the pier heads; to have a paved stone floor in the intermediate portion, between the close planking above mentioned, and a corresponding parallel row of close piles driven towards the water-way. It was proposed, also, that the whole of the piles to be driven on the inside of the old wall should be placed before the old works were removed—excepting, of course, in the positions where they interfered with the piles. The masonry and the earthwork, both in the channel and in the situation of the new stone floor, beneath the staging for the pier head, were to be removed after the completion of the latter.

The effect of retaining the ruins, in combination with the compression of the subsoil which had already been produced by the weight it had supported for so many years, was to create a degree of resistance to the entrance of the piles totally unprecedented. The ground itself consists in parts of a bed of rounded flints, agglutinated by fine white sand, occasionally containing veins of the hydrous oxide of iron. Apparently it is of the same nature as the Gun Fleet shoal in the bed of the Thames; and geologically it is analogous to the member of the basement beds of the London clay which occurs upon the surface near Bromley, in Kent. When this bed is not confined laterally, it does not offer any very extraordinary difficulties to the descent of piles, or to the operations of boring—although evidently, in consequence of its composition, it must exercise great friction, both upon the boring tools and the piles driven through it; and the resistance so occasioned would naturally be seriously felt when it became necessary to insert close, or sheet piling. But, in this particular case, it appears that the old wall acted to prevent the gravel from spreading; and consequently the new materials, the piles, could only be introduced by displacing and compressing the materials into which they were forced. It followed that the labour, difficulty, and cost of the formation of the stage were increased to such an extent as to entail a very heavy pecuniary sacrifice; and, indeed, in the case of some trial borings, to induce the contractor entirely to renounce the attempt to traverse the bed of gravel.

Under normal circumstances, the cost of driving piles, properly shod and hooped, by Nasmyth's hammer, would have been about 2s. per foot forward in ground of this description, and upon an average of gauge and sheeting piles, the rate of progress would be about 5 feet per hour. The cost of driving by hand-gear would have been about the same; because the magnitude of the work in question was not such as to render the cost of the temporary staging required for the hammer an unimportant element in the relative value of the work effected by it. But, in consequence of the induration of the ground, from the causes before mentioned, the rate of descent was so materially altered that in the space of 1¾ hour no less than 5,880 blows were struck upon a pile-head in the presence of the author, without advancing it more than 3 inches. Naturally, under such circumstances, the pile-heads were rapidly "knocked up;" and frequently, when fir timber was used, as many as six or seven heads were required, thus entailing a loss of from 4 to 5 feet lineal of the baulk. When rock elm was used, this source of expense was diminished; for it was found that the heads would in this case last three times as long as those of fir piles. But the nature of the timber did not otherwise affect the rate of descent, which varied from 1 foot to 3 inches per hour, and frequently cost as much as 42s. per foot lineal, merely for the labour and working of the engine—leaving entirely out of account the expense of re-heading the piles, or any charges for superintendence, rent, rates, or taxes.

Excessive as this cost of the work was in itself, it was, however, still further increased by many of the piles being broken during their descent, in consequence of the shoes working off, and also of the development of longitudinal fissures. In some cases, where these fissures ran at a slight angle across the pile, the latter became so shattered, and the fissures opened to such an extent, as to render it necessary to cut off, or even to draw the piles, after considerable progress had been made in driving them. Both these sources of expense were of irregular occurrence, and it was almost impossible to guard against them; for neither the inequality in the resistance of the ground could be foreseen, nor do the longitudinal fissures always show on the sides or the ends of timber baulks in their original state before driving. The piles drawn on account of the loss of shoes were two: those which were drawn or cut off, on account of defects in the timber, were about ten in number; and it may be added, that towards the end of the work it became necessary to use rock elm constantly instead of Baltic fir, from the increased resistance to the descent.

At the Great Grimsby Docks these difficulties did not occur. The works were, in this case, executed upon the alluvial mud at the mouth of the Humber, which lies (with a variable thickness) upon a stratum of hard clay. In consequence of the inequality of thickness in the upper stratum the piles varied considerably in length, being occasionally 70 or 50 feet long, whilst the average length was 30 feet, of which the last four were in the harder clay. Sometimes the piles would traverse the first 26 feet in an hour, and the remaining 4 feet in half an hour: at others, and especially when many piles had already been driven near the position of the one observed, the resistance was greater. But there were few instances in which a less number than from thirty to fifty piles were driven per day by a single engine. To perform a similar amount of work with the ordinary pile-engines would have required at least from ten to twelve machines, with their respective gangs of workmen; so that it would appear that, under favourable conditions, the economical results of Nasmyth's hammer are such as to ensure its adoption. The cost of working the engine employed at the West India Docks, and at Great Grimsby, was about 10s. 6d. per hour, including wages of driver, stoker, carpenter to attend to the pile, labourers, and incidental expenses; whilst the cost of each of the ordinary piling-engines would not be less than 1*l.* 0s. 6d. per day, without any allowance for interest on capital, depreciation, repairs, &c.

The practical conclusions which I am disposed to draw from my experience in the use of the various descriptions of engines for the purpose of driving ordinary piles, may be stated briefly as follows:—

1st. Ringing engines are adapted to driving short piles through ground of a moderate degree of hardness, but the immense number of men they require must exclude their use when the works are extensive, and many piles are to be driven.

2nd. Ordinary pile-engines, or those in which monkeys of about from 12 to 16 cwt. with falls between 12 and 26 feet are used, are the most efficient and economical when the number of piles to be driven is small, or when the ground is remarkably hard.

3rd. When, however, the number of piles is great, and the ground of an ordinary degree of hardness, Nasmyth's hammer is the most economical mode of executing works of this description.

It must, then, it appears to me, be the duty of the contractor to carefully estimate the relative proportion the first outlay will bear to the whole expense of the works, and to ascertain

the precise nature of the ground (both in its original and its contingent states) before he decides upon the machinery he will adopt for pile-driving in any particular case. The engineer or architect probably ought also to take these considerations into account, before he fixes the time for completing the works.

Dr. Potts' system of driving piles by atmospheric pressure, before alluded to, originally consisted in the use of hollow tubes of cast iron, open at bottom, and able to be closed at top; the open lower end of which was placed upon the surface to be traversed. When the tube had descended as far as possible by its own weight, the ground in the interior was extracted, and the tube being placed in communication with an air-pump, a species of vacuum was formed. The atmospheric pressure upon the top then naturally caused the tube to descend, until the compression of the inner air enabled it to counterbalance the weight of the external atmosphere. The earth in the interior was then again removed, and the operation repeated until a sufficiently solid substratum was reached, when the interior of the tube was filled in with concrete. Latterly, the tubes have been executed of such dimensions that they ought more properly to be called caissons; and in the foundations of Rochester Bridge, Mr. Hughes is said to have introduced so many alterations and improvements into the system that it would be highly interesting to compare the successive modifications of the original idea, the real merit of which, perhaps, after all, should be attributed to Coulomb, who in the year 1788 published a memoir, entitled "Recherches sur les Moyens d'exécuter sous l'Eau toutes Sortes de Travaux hydrauliques sans employer aucun Epuisement," which contains the germs of much that is assumed to have been invented at later periods. Be this as it may, the circumstances under which the use of open cylindrical caissons appear to be desirable may be stated to be when the compressible substratum is of small depth, and when it is immediately succeeded by a thick stratum of incompressible material. It is essential that the latter also should be of a nature to resist the dissolvent action of water, in case the smooth sides and cutting edge of the cylinder should lead that element to the substratum. Upon railways, to quote one instance of the situations in which these cylinders might be used, it may be necessary to cross a long, semi-fluid bog—as upon the Munich and Augsburg line. The system actually adopted there was to sink holes through the peat, in alternate squares like a chess-board, about 2 feet wide at the bottom, and 3 feet at the top, the average depth being about 15 feet: these holes were filled in with puddling clay, and the embankment was carried upon them. In this particular instance the peat was sufficiently solid to allow of the holes being cut and left without any support, and to resist the lateral displacement of the clay. Had it, however, been similar to many of the Irish bogs, the use of some such caissons as Dr. Potts introduced would have been indispensable, and, perhaps, it would have been preferable to have sunk them by pneumatic pressure, rather than in any other way. Our Transatlantic brethren content themselves with carrying their railways over such foundations upon common piles, partially driven into the ground, and partly standing above it—a mode of proceeding which may answer in countries where it is essential to keep down the first cost of such enterprises, and where wood is sufficiently cheap to render it unnecessary to regard its waste. But evidently piles thus partially exposed and partially covered up are liable to rot with great rapidity.*

FALL OF A BELL.—At Sherborne, lately, while the ringers were welcoming in the anniversary of the Coronation of the Queen, the third bell of the peal in the old church tower fell down from its bearings. The damage, however, was found to be very slight. The axle had broken asunder, and the bell, which is said to weigh 21 cwt. had fallen, breaking in the floor and one joist, but not injuring the rafters. By the aid of a few carpenters and a little tackle, according to the local *Journal*, the bell was soon raised and the damage repaired.

* From a paper by Mr. G. R. Burnell, read at the Ordinary Meeting of the Institute of Architects, June 18th.

THE SANITARY QUESTION.

ISOLATED but warning instances of the recurrence of the virulent cholera within the bounds of the metropolitan "bills of mortality" urge us, one and all, to be up and doing our part in the reagitation of this great question.

So far as regards the metropolis, the main point for consideration and amendment is the Thames. What is to be done with this *cloaca maxima*,—this tremendous sewer of sewers. Bad as it long has been, we doubt if ever it was so offensive—so beastly—as it has now become. The drought of the present summer has intensified its horrors tenfold. Professor Faraday only expresses, in the best possible way, the ideas of thousands whose senses are receiving the vilest offence as they sail along this filthy sewer, in pointing attention to its horrible condition in the columns of the daily press. Are even large type, the *Times* columns, and Dr. Faraday capable of doing *anything* for its permanent amendment? Why should either the one or the other be requisite at this time of day to urge on so vital an object and end? Does any one now doubt the deadly issue of such stenches and vapours of human refuse as those which pervade the atmosphere of the Thames? Why they are "fit to kill a horse;" and as if to remind us that they are so,—that human filth is too much even for the beasts to stomach,—we happen, just at this moment, to fall upon a little paragraph in the *Armagh Guardian*, to the effect, that two fine military horses have just been poisoned—literally killed—by the noxious vapours emanating from a barrack cesspool. Every site of congregated human beings, whether it be in a barrack or a metropolis, has a natural and inevitable tendency to become a noxious dunghill, if not constantly and thoroughly submitted to cleansing, sweetening influences; and the action and use of such influences is, or ought to be, a perpetual and paramount *duty* on the part of all municipal authorities. How disgraceful to all concerned, then, is the present state of our metropolitan river! If, as the *Times* remarks, we resign ourselves to the idea of its being the great sewer of London, what a filthy set we Londoners are not to have it covered decently over! If, on the contrary, we regard it as a great highway, and a source of metropolitan water supply (as it actually is), how still more filthy we are to sail on such a sewer, and to contaminate the very source of such a vital necessary with all that is noxious and vile! What is it but this, and such as this, that renders the country so much more healthy and wholesome than the town, and the country town than the city and the capital? Why is it but on such accounts, that while the three healthiest districts in England are Glendale ward and Rothbury, in Northumberland, and Eastbourne, in Sussex; and while the average number of deaths yearly in these places is only 15 in every 1,000 of the population; and while even in such little towns as Haltwhistle it is but 16 per 1,000, Bellingham, 17, Morpeth and Hexham 18, and Alnwick 19,—in Berwick it is 24, in Durham 24, Tynemouth 25, Newcastle 27, Sunderland and Gateshead 28, Hull 29, Bolton 32, Liverpool and Manchester 33, and so on, worse and worse, according to the extent of the congregation and compression of human beings within one limited and circumscribed circle? The greater the town the more pressing the necessity of perpetual cleanliness; whereas in our metropolis, the greatest of all, we seem to regard ourselves as liberated from all sanitary laws or restrictions, so far as regards the Thames and *its tributaries, the sewers*. Would that some such plan as that of Dr. Sayer, to which we elsewhere allude, were forthwith set about, and intercepting main sewers at once begun in earnest, without one word more of mere talk about it!

Apropos of the Thames, what *are* the Chelsea Waterworks authorities about that they do not supply something better than the miserable stuff they at present call water to their customers? What precise relation does their unusually muddy material (filtered or not filtered) bear to the likewise unusually opaque "element," or compound rather, in the river, whence they "extract" their supply? We fear to face this question any further, or to follow it to its legitimate issue: all that the Chelsea Waterworks customers can do is to shut their eyes, open their mouths, and swallow in exemplary faith what the Chelsea Waterworks may choose to send them.

THE METROPOLITAN MILE-POSTS.

BY A COUNTRYMAN.

IT is now many years ago, and yet we remember the circumstance as clearly as some of those of yesterday, that we read on the mile-stone (it *was* a stone) near our native town, for the first time, "So many miles to LONDON." A strange, yet impressive idea of the great metropolis was formed in the mind, and often after then we wandered onward with no other seeming object than to enjoy the reflection that we had progressed some miles nearer to that place of palaces, where the streets, as we were told, were all paved with gold.

In more advanced years, when increased strength and a love of old buildings, rivers, trees, and things picturesque or curious had coaxed us in search of them over many miles of road, we seldom passed unnoticed the inscriptions, "So many miles to London." Time went on, and, mounted on the stage-coach, we left our dearly and well-remembered mile-stone, and rolled on, passing mark after mark, until we reached the bustling haven of our hopes.

It is curious to reflect now on the difference between the London in reality and the dream of childhood; but this we still believe, that London streets *are* paved with gold, and that it is a richer mine than California to the greater portion of those who truly, diligently, and with intelligence, labour and search. However, years of the fog and excitement of London life have not damped the love of rambling, not only in that wonder of wonders, the metropolis itself, but also to the places of interest by which it is surrounded. During these peregrinations, many of them of pleasant memory, our old habit of noting the mile-posts, as we had better call them (the stones having to a considerable extent been changed for other materials), has often caused us to wonder at the want of system which is displayed by these wayside records. On some suburban mile-posts is marked "One mile to London." This, however, is a vague direction, for where does London begin? where does it end? or where is its centre? Are we to consider Poplar in the east and Paddington on the west; Kentish Town, Holloway, &c. on the north; Walworth, and the other large populations in the south, as the commencement of London? Does the inscription, "So many miles to London," mean that the City is London? Even this is a wide mark, and we are puzzled to know if we are so many miles from Whitechapel or from Temple Bar, both extremities of *the City*, which though of such huge extent, forms but the heart of the mighty body which spreads around. *London*, even considering the city as that particular point, is a wide address, as it is easy to discover by calling a cabman and asking him to drive to that place.

Other suburban mile posts are more explicit. On some we have noted, "so many miles to the Angel, at Islington;" on others, "To the White Horse Cellar,"—"Holborn-bars"—"Hyde-park-corner"—"Charing-cross:" some journeys end at the Royal Exchange; some at the Bank; others at the Post-office in St. Martin's-le-Grand: the termination of the Epsom-road is at Whitehall and the Exchange: one of the Tottenham roads ends at Portland-place; and a few posts have on them, "So many miles to where Hicks's Hall formerly stood!" This is, perhaps, the most vague of all; and we have heard some, with wonder in their countenances, ask who was Hicks?—*what* was Hicks?—and where was Hicks's Hall. It may suffice for our present purpose to mention that Hicks's Hall was in St. John's-street, Clerkenwell, and that a memorial of it in the shape of a mantel-piece is preserved in the present Sessions House, Clerkenwell-green. Other mile-posts for the guidance of the ignorant wayfarer might be mentioned, but to increase the examples is unnecessary.

At the present day, when London has become so bulky, and is still constantly growing in a compound manner, like a rolling snow-ball, it is

difficult to imagine the state of confusion we should have been in but for the numbering of the houses and shops. This and some other plans have served to keep us in something like order. The police are alphabetized and numbered: the cabmen and omnibus-men in like manner have their numbers from one to several thousands. Lately it has been considered necessary to arrange the watermen and letter-deliverers in a similar manner. Notwithstanding all this, as is shown by the varied inscriptions on the mile-posts, *the centre of London has not yet been clearly established;* and surely it must be difficult in many ways, in such a mass of buildings and population as are contained in the metropolis, to have a proper system of order without a well-known and decided central point. So far as the transmission of letters is concerned, a circle is drawn from the General Post-office, and to this point the mileage fairly set forth on the *mile-posts throughout the kingdom should radiate.* The new pillar post-offices in the streets, on each of which is the distance in miles and furlongs to the General Post-office, is a move in the right direction, and which only requires to be more extensively carried out.

In Cannon-street, not at a great distance from the General Post-office, as our readers know, still stands the venerable London stone, which by most antiquaries is considered to have been the central point for the purpose of the measurement of the Roman city. This was a capital example of order, which it is to be regretted has been lost sight of; yet it is curious to notice, notwithstanding the random manner in which London has been built at different periods, what a short distance that which must again become the centre of London has moved during 1,600 years. Some will say that it is not worth while now beginning to make any fuss about centralizing our roads, for that as the paint of the old posts wears off they will be sure to do what is so obviously necessary,—mark, "To the Post-office." It would seem, however, that such is not the case, for we note many posts, seemingly newly-lettered ones, in the old fashion: at Brompton, for example, is one, on which is inscribed, "Fulham 2½—London 1." Very precise, certainly!

To carry out the alteration to which we refer as being required would, it is true, so far as the provinces are concerned, be attended with some trouble and expense; and yet it is highly necessary. In the neighbourhood of London the cost would be but trifling, particularly as many of the posts are only painted. In necessary public improvements we should make the cost a secondary consideration.

Supposing, as indeed it must as a matter of course, that the General Post-office in St. Martin's-le-Grand becomes eventually the central point of London and also of the United Kingdom—the Post-office even is too vague a centre: we ought to have a distinct object, that we can see and touch; and, standing beside it, as the Anglo-Romans did in ancient days by the side of London-stone, know to a yard without dispute the distance from town to town, and from place to place. This object, in a great city like London, should be remarkable both for its fitness to its purpose and for its artistic design, and would be a proper place for the reception of the effigies of those men who, like Macadam, Telford, Stephenson, and Rowland Hill, have advanced the nation by facilitating communication.

NORMANDY.*

How completely is the pleasure or profit of any pursuit in which we may embark in life dependent upon the *animus* with which we engage in it, and the capacity with which we fulfil it. The well-known axiom of philosophy, that size can be but relative,—that is, that the same object appears of various degrees of magnitude according to the eyes with which, or the medium through which, we behold it, applies still more forcibly to beauty, whether of art or nature.

"De gustibus non est disputandum."

The universally accepted aphorism renders caution necessary in the expression of opinion upon beauty, for the very standard of excellence by which we form those opinions, though of universal acceptation, varies in intensity according to the different capacities and various powers of appreciation with which we regard them.

These observations apply with peculiar force to the subject of travelling,—an intellectual and delightful mode of passing spare time, once limited to the adventurous few, but now, from facility of transit, and wide-spread accommodation, within reach of the many, but still peculiarly adapted to the fortunate class who possess those three grand requisites for its perfect enjoyment,—health, wealth, and wisdom. The first and last ingredients are the most important, for our appreciation of what we see mainly depends upon them.

The most important condition of travelling is a definite object. The architect, the archæologist, the painter, the sculptor, the musician, the linguist, the botanist, the geologist, the agriculturist, the scholar, will all find abundant amusement where the lounger will expire of *ennui*.

Even the places voted in the handbook "dull, dirty, devoid of interest," will show, upon inspection, that their sentence implies comparison only; and it must be a desolate region indeed that will afford no kind of satisfaction to one or other of the above investigators. Abroad, one certainly finds more excitement than at home: language, dress, features, manners, habits, government, religion, architecture, produce, climate, history, and geographical position, all being different to what we are accustomed to, extra stimulus to exertion is awakened, new gratifications are conferred. Among the continental regions adjacent to England, none have a greater claim upon the sympathies and interest of every educated Englishman than Normandy. Well may the French call it "*la belle*," for it includes some of the most lovely scenery of their wide domains. The superiority of the locality was early evinced by the preference shown by those best of all judges the monks, who covered the face of the country with abbeys, convents, and monasteries, whose remains to this day present an inexhaustible treasure of archæological studies.

The crumbling relic of feudal grandeur that rear their time-honoured towers above this fair scene of field and foliage, bring one back to the period when the Norman William left his paternal dukedom to try his fortune in that wider and finer field, where the blood of his race was to be for ever after blended with our own. That fusion of blood and interest, of language and manners, has formed an indissoluble connection between England and Normandy, and renders it the more remarkable that a country so near, and of attractions so distinguished as the latter, should be so little visited comparatively by our tourists; illustrated, too, as it has been, by such investigators as Turner, Gally Knight, Whewell, Colman, Pugin, Caumont, and Charpentier.

The specimens of mediæval architecture are unrivalled for richness and variety, but have been too often described by us to render enumeration necessary. In our previous volumes will be found several long notices of Caen, Rouen, and other parts of the country, with views of many of the buildings.

The volume before us bears evidence throughout of the scholar and the keen observer.

The portion of Normandy explored was the department of Calvados,—the time occupied, including journey there and back, one month.

To reach the land of promise, the author landed at Calais, and touched at Boulogne, Dieppe, and Rouen. The tour of Calvados itself comprised Honfleur, Caen, Bayeux, Vire, Falaise, and Lisieux. This department lies between those of Seine Inferieure and Eure, on the north-east side, and of Manche and Orne on the west and south; its greatest length being seventy-five miles, its greatest breadth forty-nine. It contains mines of iron and coal, quarries of great extent, variety, and value, including those of granite and the well-known Caen stone, to the reputation of which latter, by the way, the quarry owners are the worst foes. Its chief trade is in wheat, horses, fatted oxen, and cider; and the making of lace, tulle, and blonde, employs 21,000 women and children in Caen alone.

As to the origin of the title, Calvados, Mr. Musgrave says, "Most of the principal towns and villages of the continent have their Calvaire; an eminence, generally in the outskirts of the place, distinguished by a crucifix and small oratory, or shrine for prayer,—around which are the graves and monuments of the dead; a cemetery, in fact. The Spanish word for Calvaire is *Calvados;* and this appellation, primarily annexed to the *reef* only, at the period of the occupation of this coast by the Spaniards, was subsequently adopted by the government (when France was divided into departments), as the distinctive name of the region of territory whose boundaries have been already described. It was long before I succeeded in acquiring this information. In all quarters, even among the savans of the Lycée Imperial, at Caen, I heard the most ridiculous conjectures as to the derivation of the word."

He gives a very satisfactory account of the provisions for education provided, and is urgent, as every man should be, in calling for the most complete arrangements with this end in view in our own country:—"Education should be 'laid on,' like water, in every town and village street. It should be cared for like ventilation; like pure air. If the dense masses enjoy it not, they sicken, and dwindle, and prematurely decay; and better were it for many legions of loose and lawless children to die in their ignorant and irresponsible infancy, than grow up untaught, uncivilized, unmanageable, and unfit for a future here or hereafter; since, in such instances,

'Worse than dying is to live;'

and, in my humble opinion, the best Boards of Health that England could maintain in efficacy, at the present moment, would be those that should form themselves into a standing committee of management for bringing every poor man's child, in town or country, within the salubrious and blessed influences of a well-ordered school; of an institution where religious training should go hand in hand with practically useful knowledge, and patience have her perfect work in conciliating a *love* of such attainments, *and of the teachers. Their* aim should ever be to educate for *eternity;* but let such trainers of youth take hints from these large French schools, where that ambition of self-maintenance is awakened which is best calculated to provide for each child through *time*."

The writer gives a long account, in a popular style, of the Bayeux tapestry, that historical sampler by the past young ladies of Normandy, and dilates with enthusiasm on the beauty of Falaise, as well he may,—the birthplace of William the Conqueror,—Falaise, with its towering castle, bold rocks, and luxuriant trees. In his notice of St. Peter's church, at Caen, our author appears to confuse, as many others do, the two Pugins. It was the elder Pugin who made tours of Normandy with his pupils, and a well-known work was the result.

We have said enough to show that Mr. Musgrave's work contains much that is pleasant and instructive. Although not architectural in its true sense, it contains much pertinent remark relating to art, and the architectural as well as general tourist will find it a useful and agreeable *compagnon de voyage*.

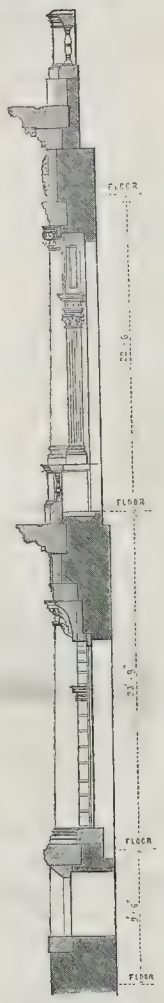
* A Ramble through Normandy; or, Scenes, Characters, and Incidents in a sketching Excursion through Calvados. By George M. Musgrave, M.A. London: D. Bogue, Fleet-street. 8vo.

DESIGNS AT GORE HOUSE.

It seems desirable to call the attention of potters and encaustic tilemakers to the specimens of elementary design now exhibiting at Gore House, Kensington, being a portion of the studies of the Schools of Art collected there, and thrown open to the free inspection of the public.

The form selected by the Marlborough House authorities was a hexagon, of about 7 inches diameter, and the flower from which the designs were to be made, the *solanum dulcamara*, or woody nightshade, the flower being conventionalized, and arranged geometrically so as to fill the space within the hexagon as evenly as possible.

The efforts which the students have made in this class prove that it is a popular one; indeed, after a careful review of the several classes, and the works in the Exhibition generally, it may with truth be said that this



elementary exercise of the inventive faculties has been productive of more satisfactory results than any other portion of the school system.

It is certainly within the mark to say, that there are a hundred and fifty designs, all composed of the woody nightshade, and all filling the required space, no two of which in any degree resemble each other. Produced by many students of different education and manners, the impress of each mind is distinctly stamped upon its work, resulting in a variety which is positively marvellous. Few colours and many colours are made use of, according to the taste of the individual student, and each differs from the other in both drawing and colouring.

Now, as a hexagon is a form frequently used as a tile for ecclesiastical purposes, and as there is a much greater want of good designs in those of the present day, than technical excellence of manufacture, here is an admirable opportunity for our potters, of obtaining such designs as would be worth the expense of reproducing in encaustic and earthenware. Extremely simple in their arrangement, they would combine individual excellence with extremely rich general effect, if used as the pavement for altar-steps and chancels. I am aware that in many cases the colours would have to be altered, and their number modified; but let me point out the designs of the Paisley, Manchester, Potteries, and Birmingham schools, and I am sure that an examination of their merits will be sufficient plea for their adoption as what I have suggested, on same terms. Such an astonishing amount of originality should not be thrown away, and manufacturers should be apprised of the existence of these works, and invited to appropriate them to their especial branches of manufacture. I regret to say that the London school, hitherto so successful in this particular class, is sadly deficient this year in both drawing and colouring.

In conclusion, let me remind those who have the selection of form and subject for these designs, that the fountain-head of reformation and purification of ornamental art should pay some slight attention to the bearing of all works produced in the schools of art. If the talent which has been displayed in these productions had been applied *intentionally* to designing for ecclesiastical tiles, or some such purpose, we should have had even a more valuable result than we see at present, and it would have been no greater tax upon the abilities of the students. It does not look like wise economy to risk the wasting of so much artistic labour, when with a little forethought it might so easily have been brought directly to bear upon an important branch of ornamental art. The very excellence of the designs shows what might have been done, if simple rules concerning their colouring as applied to walls or floors had been stated when the form and subject were chosen and given out. The schools of art are supported by the nation for the improvement of ornamental art, and through it for the refinement of the people, and not as a toy, or an amusement which has no end in view. To them we look for emancipation from our gross servility to the French School of Design, and in them alone do we recognize our means of obtaining a school of our own. On them we rely for the proper guidance of our arts and manufactures, and, as a nation, have a right to expect some return for the public money already expended upon them. At the same time let manufacturers remember, that as long as they hold aloof from the schools, they must bear the brunt of the charge of bad taste with which the public is charged. Let them only put themselves in communication with the schools, and offer liberal prices for the designs which they require, and there will be no lack of talent to respond to their requisition. If half the sum they pay a private designer was offered as a prize in a public competition, the manufacturer would receive a much better work, and the student be encouraged to persevere in his profession. A MARLBOROUGH HOUSE STUDENT.

SAXON COINS.—There has been a remarkable find of Saxon coins in the neighbourhood of Scotby. The coins are in an excellent state of preservation, and extend to Edward the Elder, son of Alfred the Great.

The Carlton Club-House: Section of the Front Wall.

THE CARLTON CLUB.

THE Carlton is a purely political club, and was founded by the late Duke of Wellington, and a few of his most influential political friends. It first held its meetings in Charles-street, St. James's, in the year 1831. In the following year it removed to larger premises, Lord Kensington's house, in Carlton-gardens. In 1836, an entirely new house was built for the club, in Pall-mall, by Sir Robert Smirke, small in extent, and plain and inexpensive in its architecture.

As the club grew in numbers and importance, the building soon became inadequate to its wants. In 1846, a very large addition was made to it by Mr. Sydney Smirke; and in 1854, the whole of the original building was taken down and rebuilt by Mr. Smirke, upon a sumptuous scale; and it is now the largest although not the most costly club-house in London. The club consists of 1,300 members, each paying an annual subscription of ten guineas, with an entrance-fee of fifteen guineas. The business of the club is managed by a committee of thirty members and the five trustees, viz.—The Duke of Buccleuch, the Marquis of Salisbury, the Earl of Hardwick, Lord Redesdale, and Lord Verulam.

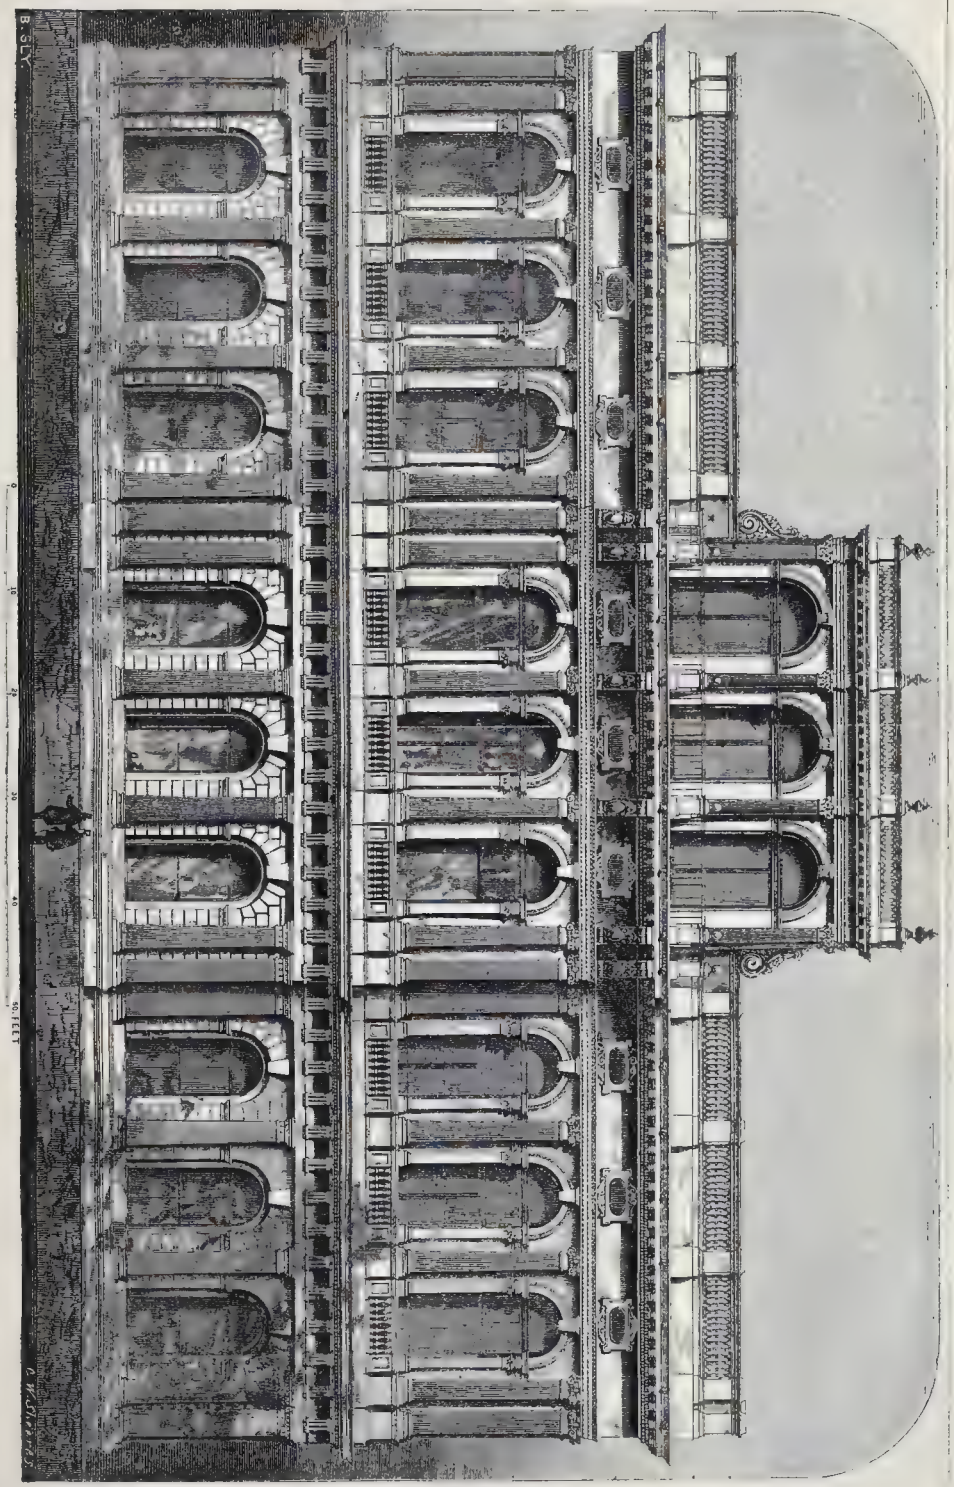
It is a vulgar error to regard a club as the rich man's public-house: it bears no analogy to a public-house: it is as much the private property of its members as any ordinary dwelling-house is the property of the man who built it.

A history of the clubs of London would make a curious chapter in the social history of the people of England. Our clubs are thoroughly characteristic of us. We are a *proud* people—it is of no use denying it,—and have a horror of indiscriminate association; hence the exclusiveness of our clubs.

We are an *economical* people, and love to obtain the greatest possible amount of luxury at the least possible expense: hence, at our clubs we dine at prime cost, and drink the finest wines at a price which we should have to pay for slow poison at a third-rate inn.

We are a *domestic* people, and hence our clubs afford us all the comforts of home, when we are away from home, or when we have none. Finally, we are a *quarrelsome* people, and the clubs are eminently adapted for the indulgence of that amiable taste. A book is kept constantly open to receive the outpourings of our ill-humour against all persons and things. The smokers quarrel with the non-smokers: the billiard-players wage war against those who don't play; and, in fact, an internecine war is constantly going on upon every conceivable trifle; and when we retire exhausted from the fray, sofas and *chaises longs* are everywhere at hand, whereon to repose *in extenso*, as cats after their nocturnal sports are wont to come home and elongate themselves upon the kitchen hearth. The London clubs are certainly the abodes of earthly bliss, yet the ladies won't think so.

We have already illustrated the entrance front of the new Carlton Club-house (p. 282, and previously), and have given a plan of the ground-floor. The annexed engraving represents the garden front: the pilasters, which here take the place of columns in the entrance front and flank, are of the same material as the latter, namely, Peterhead granite, polished. On the first floor are the east and south library (over the morning-room and writing-room), the card-room (over entrance-hall), and the house dinner-room and billiard-room, over the two ends of the coffee-room; the centre part of the coffee-room has a skylight above it. The vestibule has a gallery round it on this story, marked on the plan of the lower story previously given. We append a section of the front wall in Pall-mall.



MEETING OF ART-WORKMEN AT ARCHITECTURAL MUSEUM.

THE meeting of art-workmen on Monday evening last, was very well attended: between 300 and 400 persons (chiefly workmen) were present. The Rev. F. D. Maurice was in the chair, and made an address. Mr. S. C. Hall, Mr. Ruskin, the Rev. Charles Boutell, Mr. Penrose, Mr. Scott, and others, also addressed the meeting. Several of the workmen, too, spoke. It seems on the whole to have been a very successful attempt to interest the art-workmen in the Institution, and to show them how they may aid themselves.

It was announced that Mr. Godwin had offered two prizes of a guinea each, for the second-best specimens of stone and wood carving; and that the Rev. C. Boutell had been raising subscriptions for a prize for a design in metalwork. Mr. S. C. Hall also stated his willingness to place at the disposal of the committee, a sum of money for the same or any other object upon which they might determine.

A correspondent, in reference to our notice of the five-guinea prizes, proposed to be given by the committee of the Architectural Museum, to carvers in wood and stone, objects that they are not large enough for the production of works pretending to reach beyond commonplace mediocrity. It must be remembered, however, that the real prize after all is not the amount offered, but notoriety and distinction.

ELECTRO-TELEGRAPHIC.—The Electric Telegraph Company was lately summoned for poor-rates at Salford, and refused to pay, because it occupied no "land" or "earth." The Court of Exchequer decided against the company, quoting Lord Coke, who said,—"The earth had in law a great extent upwards not only of water, as had been said, but of ayre, and all other things, even up to heaven."

THE CARLTON CLUB-HOUSE: GARDEN FRONT.—MR. S. SMIRKE, R.A. ARCHITECT.

CHURCH-BUILDING NEWS.

Hertford.—At the village of Bengeo, or Benehoo, on a site close to the new National Schools, and adjacent to the principal street of the village, a church, containing sittings for 600 persons (450 free), has been erected, in the Early English style. The church consists of nave and two aisles. The fittings are plain. The seats are lowbacked. The roof is open-timbered. The church is at present without a tower. The total expense incurred is 4,779*l.* 17s. 2d. which is thus divided: erection of church, 3,890*l.*; purchase of land for church and burial ground, 329*l.* 17s. 2d.; fences, gates, stoves, architect, and other expenses, 560*l.* The architect was Mr. Benjamin Ferrey, and the builders were Messrs. Holland and Co. The edifice was consecrated on Friday in last week.

Upper Tooting.—The new church of the Holy Trinity, at Upper Tooting, in the parish of Streatham, was recently consecrated by the bishop of the diocese (Winchester). This church was first promoted some year and a half since, and the subscriptions were rapidly raised, amounting to upwards of 4,000*l.* The ground was then given by Mr. Browse, one of the committee; and some twelve months since the church was commenced, under the superintendence of Mr. A. Salvin, the architect. The edifice, which is calculated to hold 700 persons seated, one-third of the seats being free, is in the Early English style, and built of Kentish rag-stone, with Bath stone dressings, and consists of a nave, with side aisles, together with a chancel, with side aisles also, with columns intersecting. The roof is a plain open timber one, of stained deal, and the pews throughout are of same material. There are no galleries in the church. The tower is not yet commenced.

Norbiton. — The consecration of the new burial ground at Norbiton, Kingston, took place on 27th ult.

Coln St. Aldwyn.—The tomb of the late Sir M. H. Hicks Beach, bart. of Williamstrip Park, Member of Parliament for East Gloucestershire, has just been erected over his grave, in the churchyard of Coln St. Aldwyn. The intersection of the gables forms a floriated cross. In the panels on the north-west and south sides are carved lilies and passion flowers. At the east end are the arms of the family emblazoned on a shield, lying at the foot of the cross. A text of Scripture is inscribed on each side of the plinth. The work has been executed in Ancaster stone, by Mr. S. Cundy, of Pimlico, from a design by Mr. G. R. Clarke, architect.

Shipston-on-Stour.—On 20th ult. the parish church of Shipston-on-Stour, having been rebuilt with the exception of the tower, was re-opened. It consists of a nave, filled with open benches; north and south aisles extended beyond the chancel arch; a chancel, fitted with stalls; north and south porch; and vestry. The architect was Mr. G. E. Street, who had very limited funds at his disposal. He has retained two windows of the original church, one of which, a window of the thirteenth century, together with another of same period, preserved and restored in the old tower, forms the ground-work of his design. The works have been executed by Mr. Joseph Mills, of Stratford-on-Avon, builder. The edifice will accommodate 800 persons.

Bath.—A meeting of the congregation of the Percy Chapel was held last week, when it was stated that the cost of the edifice, including organ, expense of opening, &c. amounted to 4,949*l.* Of this sum 2,550*l.* had been received; 150*l.* promised; and 2,000*l.* borrowed; leaving a deficiency of 250*l.* Messrs. Goodridge, the architects, sent in their account for upwards of 250*l.* accompanied with a stamped receipt for the amount due, the architects having thus given their services gratuitously. A plan was determined on for paying off the debt.

Cardiff.—The opening of the new Congregational Chapel, Cardiff, took place on Thursday before last. This chapel has been lately erected in Charles-street, in this town, for the congregation formerly in Church-street. Mr. R. G. Thomas, of Newport, was the architect, and the builders were Messrs. Price and James, of this town. The chapel is in the Early Decorated style. The face-work of the walls is of various coloured stones, placed so as to contrast with each other. The stones, it is said, "were brought from all parts of the world, and are of every variety of geological epoch." In the construction of the roof, each rafter forms a complete principal, strengthened at intervals of 12 feet by curved ribs, to which are fastened wall-plates, instead of the usual form of beams and purlins. The organ-gallery is placed within an arch at the back of the pulpit. The large west window contains the flamboyant tracery of the Decorated period, and is filled with stained glass. The total cost of the structure amounts to about 2,400*l.* It contains about 530 sittings, and there is a school-room underneath, measuring 73 feet in length by 33 feet in width.

Llowes.—On Tuesday in week before last, the new church of St. Meilig, Llowes, Radnorshire, was opened by the Bishop of St. David's. The church (the erection of which is mainly due to Mrs. De Winton, of Maesllwch Castle) is built on the site of the old one, and, with the exception of part of the tower, is entirely new. It is executed in the grey stone of the country, with Bath stone dressings, and is in the Early English style of architecture, and consists of nave, chancel, and porch entrance, with vestry on the north side. An open arch into the tower displays a three-light tracery window. The chancel windows, four in number, are all of stained glass, by Ward. The east window consists of four lights, representing the Four Evangelists; and a medallion above contains "the Institution of the Holy Eucharist." The south window represents "Christ blessing Little Children," and "Christ stilling the Tempest,"—a family thank-offering for the safe return of Capt. Collinson from the Arctic Seas. The north window represents the "Adoration of the Magi," and a small gable window the "Holy Ghost descending like a Dove." The roof of the nave is of high pitch, stained dark oak: that of the chancel is plastered between the timbers, and coloured ultramarine blue, powdered with gilt stars, and has a cornice of trefoils in light oak: the pavement is of red and black tiles. The building will hold nearly 300 people, and costs about 1,200*l.*

Willaston.—On Thursday in week before last, Christ Church, Willaston, was consecrated by the Bishop of Chester. Willaston is a township in the parish of Neston. The site was given by Mr. P. Heywood; the stone by Mr. Roberts, of Liverpool. The whole cost of the church is 1,300*l.*

Retford.—East Retford parish church, we understand, will be opened on 20th August for divine service, Mr. Lee, the contractor, having nearly completed the restoration of the edifice.

Hulme.—The new church, dedicated to St. Paul, situated in Stretford-road, Hulme, has been opened for Divine service. It is in the Decorated style. The front abuts upon Stretford-road, its entrance consisting of a large porch under the tower. Over the porch is a large six-light window, with traceried head. A similar four-light window lights the front of the aisles. The whole is surmounted by a bell tower, with eight pinnacles. The tower is 71 feet high, and has a window in each of its four sides. The building is 95 feet long and 48 feet wide. There is no fenestration in the sides, the whole of the light for the interior being from the clerestory and the front windows. The clerestory is glazed continuously along both sides. From three metal columns on either side the nave rise skeleton timber arches, and these support the clerestory. There are side and front galleries, and the church will accommodate 1,100 adults and 200 children. The cost of building is 2,200*l.*; and as the edifice will seat 1,100 persons, the average is 2*l.* per sitting! The church was erected from designs by Mr. R. M. Smith, architect; the contractors being Messrs. Mellor, Son, and Terras, Ardwick. A circular stained window, over the altar, bearing an emblem of the Trinity, was furnished by Messrs. Drury and Smith, of Sheffield.

Newcastle-upon-Tyne.—The Bishop of Durham (says the *Gateshead Observer*) having objected to consecrate the Church of England chapel in St. Andrew's Cemetery, unless it were 100 feet apart from the unconsecrated chapel (three times the distance which separates the chapels of the Jesmond Cemetery), there was a meeting on 29th ult. of all the Burial Boards of Newcastle, when a deputation was appointed to wait upon his lordship with the plans of all the cemeteries, and effect a friendly arrangement.

PROVINCIAL NEWS.

Reigate.—The Asylum for Idiots at Reigate was formally opened on Tuesday in last week by Prince Albert. It will accommodate 400 inmates, viz.—34 adult females, 66 adult males, 133 boys, 67 girls, and 100 infants, besides the officers of the establishment. The building is in the Elizabethan style, and is healthfully situated. It consists of a central building, with two wings each of which presents a front miniature of the main front. It has been erected by Mr. Jay, at a cost of about 35,000*l.* The architect was Mr. Moffatt. Mr. Sneezum, of Red-hill, acted as clerk of the works. The visitors at the opening inspected, with much interest and no little astonishment, the drawings, the specimens of tailoring and shoemaking, and the other articles executed by the idiots. A model of a frigate, built by a boy who, at the time he entered the institution, was not possessed of the least glimmer of intelligence, it is said would not disgrace the best shipbuilder in Woolwich Dockyard.

Shoreham. — The foundation-stone of the College of S. Mary and S. Nicholas, at Lancing, was laid on Wednesday week in the presence of several hundred spectators, by Sir John Patteson, the senior trustee. The town was decorated with triumphal arches, bearing inscriptions in Latin and English, and the entrance to the New Shoreham churchyard, nearest the station, was covered with evergreens. The new building will consist of all the usual arrangements of a mediæval *collegium*, in the Middle Pointed style of architecture. The foundations are already finished. The late Mr. Carpenter was the architect who furnished the plans, which are being carried out by Mr. Slater. Messrs. Chessman, of Brighton, are the builders. The brass plate covering a coin of the realm beneath the stone, bore the following inscription:—

+
Ad SS. et Individuæ Trinitatis
per omnia sæcula sæculorum
gloriam sempiternam
et in honorem Beat. Virg. Mariæ necnon S.
Nicolai
hujusce Collegii
lapidem angularem posuit
vir honoratissimus Joannes Patteson Eques
reg. mag. a secretior consil
visitatore præposito ac sociis assistentibus
die iv. mensis Julii. a.s. Mdcccl v
Regnante Victoria
Ashurst Turner, ep. Cicestr. necnon visitatore
Nathaniel Woodard præposito
Ricardo Cromwell Carpenter
qui jam in Christo obdormivit
Architecto primario
Gulielmo Slater operibus præsidente.

The ground plan of the building shows that it will consist of two quadrangles running east and west. In front will be a quadrangular piece of ground, at the south-east corner of which the provost's house is to be erected, and on the northern side will stand the chapel, which will abut from the front of the building. To the south of the chapel, and forming part of the front, will stand the hall, a large building, which will extend to the main entrance, on the other side of which will be the master's house, and this will terminate the front and form the south-east angle of the college. The main entrance, which will be ascended by a flight of broad steps, leads into the first quadrangle; it will be surrounded by class-rooms and other apartments devoted to the officials of the college. On the west side there will be a laboratory and school-room, between which will be a communication with the inner quadrangle: on the other three sides of which dormitories, lavatories, and trunk rooms are to be erected. The college will be erected of flint, with facings of Caen stone. The object of the building is for giving a first-class public-school education, combined with the inculcation of Church doctrines, to children of parents of limited means. The college is to be conducted by clergymen only, and it is children of shopkeepers, and

even of the artizans of populous places like Southwark and Lambeth, who are expected to derive advantages from its operations, as the terms are, it is said, to be on a remarkably low scale. Mr. Woodard, the Provost elect apparently, in his address said, that after the society had erected a chain of schools across the south, they meant to do the same across the north of England, and so cut the manufacturing districts in half. Baron Alderson, Lords Delaware and R. Cecil, and other gentlemen, also addressed the assemblage at the site.

Stafford.—The mural monument subscribed for by the members of the Oxford Circuit, and sculptured by Lough, to the memory of the late Justice Talfourd, has been placed in the Crown-court, Stafford, against the wall between the two galleries. The bust is life-size, but many are of opinion that the likeness is not a good one, and that much of the effect is marred by some few misplaced ornaments.

Melton Mowbray.—The Corn-exchange here appears to be receiving its more decorative touches. Mr. Whitchurch has presented some of Messrs. Minton's centre tiles for the floor of the entrance-hall. There are three of these centre pieces, each of the same design, but the surrounding portions have two patterns. The chimney-pieces are now being sculptured by Mr. Robinson, of Derby, who has completed one with an agricultural group.

Leeds.—The Market Committee of the Leeds Corporation have received tenders for the various works required in the construction of the covered market, to be erected in the Kirkgate Market-place. There were eight tenders for the whole of the work, and a considerable number for separate divisions of it. The highest estimate for the whole was 14,797*l.* and the lowest 10,854*l.* The latter was from Messrs. Nelson and Son, ironfounders, Leeds, and was accepted. The works are to be proceeded with as early as possible, and will probably, according to the local *Intelligencer*, be completed by the 1st of June, 1856.

Sunderland.—Mr. E. Backhouse, Jun. says the *Gateshead Observer*, has laid before the Building Hill Committee at Sunderland a design for a crystal palace, to be erected on the site of the old house on the highest elevation of the hill, and which, it is estimated, will cost 7,500*l.* The building is to embrace a museum, winter garden, school of design, and large hall for tea meetings, bazaars, and exhibition. It is proposed to offer 20*l.* for the best plan in detail, and estimates for the proposed building. The grounds are in a very forward state. Chairs for the public are liberally scattered over the ground.

Jarrow.—The dock contractors are laying down rails from the old Brandling Junction Railway to the Slake. They are also excavating for the line of railway from below Brockley Whins to Jarrow, and materials for the further progress of the works are being accumulated. The undertaking will be prosecuted with vigour, and in a short time a large body of workmen will be employed in the construction of the docks.

SALTPETRE ON THE SURFACE OF WALLS.

IN connection with the inquiry and remarks on this subject recently made in our journal, it may be useful to refer to a communication from Mr. C. H. Smith, to the "Commissioners on the Fine Arts," which was printed in their second Report, 1843, but was not otherwise made public. Mr. Smith says, in the course of it,—The mineral substances chiefly used in building, consist of lime, sand, and different kinds of stone, neither of which contain any saline or deliquescent matter as an integral part of their composition. No trace of salt or alkali is mentioned in the analyses of various stones that were examined with reference to the selection for building the New Houses of Parliament. Bricks are made of clay, which consists principally of alumina and silica, but generally containing some portion of lime, in the state of carbonate or sulphate; carbonate of magnesia; iron in the state of oxide, or combined with sulphur; and common culinary salt: these various materials, when exposed to a red heat, act chemically on each other: the magnesia most probably will combine with the sulphuric acid, which it obtains partly from the iron pyrites mixed with the clay, and partly from the fuel, if coal is used. It is this sulphate of magnesia (common Epsom salt) which is occasionally found to cover the surface of newly-built walls with an efflorescence like hoar frost.

The presence of saline or deliquescent matter on the surface of a building, either internally or externally, may, to a certain extent, be attributed to carelessness, ignorance, or inattention of those who superintend the construction of an edifice. Salts, alkalies, or acids, according to the usual acceptation of such terms, do not necessarily form any part whatever of building materials. Nearly all animal and vegetable substances, when in a state of putrefaction or decay, produce a certain quantity of saline or alkaline matter, which absorbs moisture rapidly; therefore every precaution should be taken to avoid admitting such substances into a building where damp walls are likely to be of serious importance.

Under ordinary circumstances it is scarcely possible to get rid of the various saline or deliquescent substances that have once been admitted into the walls of a building. The fixed alkalies (potash and soda) may probably be considered imperishable: no length of time can injure them: they may effloresce, or, more properly, they may crystallize on the surface of a wall, and totally or partially disappear again and again, as often as a change in temperature or of dryness or humidity takes place: these changes may be daily, or the salts may remain inactive during ages, and, from some favourable cause, a crop of crystals may be produced as flourishingly as if the wall had been recently erected. The only way to abate the evil, is to brush off the crystals, dry, whenever they appear in the most flourishing condition. If potash has been introduced into the walls, either from the putrefaction of animal or vegetable substances, such as have been named, or from other sources, however thick the wall may be, it will make its way to the surface, and then absorbing nitrogen from the atmosphere, which contains 70 or 80 per cent. of it, nitrate of potash (or saltpetre) is produced.

If we may imagine the possibility of salts in a crystalline state getting to the interior of a dry wall, beyond the influence either of moisture or considerable variation of temperature, in such case they would unquestionably remain crystallized as they were deposited; but such a state of things is never likely to take place: salts are generally communicated to a building in weak solutions: the water very gradually evaporates, carrying with it, from the interior of the wall, the molecules which compose salt. The solution having arrived at the surface, so as to be freely in contact with the atmosphere (which is always essential to crystallization), evaporation continues until the solution is sufficiently strong to crystallize, leaving only the mother-water in the wall, which is indicated by a certain dampness.

Lime, mortar, or some other sort of calcareous earth, seems to act as a vivifying principle to set the molecules of salt and water in action: if no lime were present, crystallization would certainly be much less active. An increase of temperature, or a humid atmosphere, will slowly dissolve the salts: if both these causes occur at the same time, liquefaction will be rapid, and the newly-formed fluid will be absorbed into the wall as fast as the salts are dissolved. These changes will take place with every variation of atmosphere: a cool dry air, in a state of absolute rest or stagnation, is favourable to crystallization: a warm one, charged with aqueous vapour, will facilitate solution. It is extremely probable that several kinds of salts may be formed on the same wall, with their crystals intermixed so as to escape the discrimination of a casual observer, and that each will crystallize and liquefy at different times, according to the temperature and the quantity of moisture in the atmosphere: should this be the case, perhaps the wall may never appear perfectly free from efflorescence, so long as the various stimulants of air, moisture, light, heat, and other causes of attraction are in activity; and, since all attraction is mutual, it may readily be understood, that as the particles of water attract those of the alkaline salt, and retain them in solution, so the particles of alkaline salt will attract those of the water, and hold them in crystallization.

PLAN FOR REALIZING FUNDS FOR METROPOLITAN MAIN SEWERAGE.

THERE has been printed, for the use of the commissioners, an "Inquiry, presented to the Commission by Dr. A. Sayer, Commissioner for Marylebone, "to ascertain the maximum limit of the annual taxation required from the sewers ratepayers, and to advocate for the community the adoption of the principles of joint-stock association for the raising and liquidation of the funds to improve and extend the sewerage, and to intercept from the Thames the sewage and drainage of London." Dr. Sayer having moved at the Court of Sewers on 15th of May last, "That large funds being required efficiently to improve and extend the sewerage and drainage of the metropolis (1,500,000*l.*), and to carry out the great works (resolved on unanimously by the commission as expedient) for the interception and the delivery of the sewage, &c. north of the Thames at Barking-creek, and south of the river at or below Plumstead-marshes (3,500,000*l.*); this Commission do take into consideration the means of raising the money (5,000,000*l.*), paying the interest thereof, and ultimately paying off (5,292,475*l.* which includes the existing debt, 292,475*l.*—the 110,000*l.* now invested in Exchequer Bills, and the 150,000*l.* to be received under engagements entered into by the last Commission—together 290,000*l.* part of the 3,500,000*l.* required for the great works of interception, &c.;) on terms the least onerous and the most equitable for the present and future ratepayers—with reference to the Bill now before Parliament, 'For the better Local Management of the Metropolis;'"—the mover of this resolution proceeds to explain his views, in the course of which he points out that great works carried on at Paris, and in the Department of the Seine, are supported by funds raised under the authority of the legislature, by the public sale of *Obligations de la Ville de Paris*, or *Obligations du Departement de la Seine*;—Bonds of the City of Paris—Bonds of the Department of the Seine; these bonds being for 1,000 francs,—about 40*l.* each; and he states it as his opinion that if Parliament were to grant similar privileges to the metropolis of England, the large funds required might be raised and paid off by the ratepayers with all the advantages and economy of joint-stock association;—that the system would be found preferable to the measures provided by clause 141 of the "Bill for the better Local Management of the Metropolis,"—and that it would secure to the ratepayers the saving of a large amount of money. From this inquiry, he adds, it will become apparent that the maximum limit of a general equal and annual pound-rate need not exceed, from the metropolis, exclusive of the City of London, eightpence,—and from the City of London, fourpence. Such a rate assessed and levied by Act of Parliament on the 1854 gross metropolitan assessment 9,484,945*l.* and on all future increments thereof *without* the present metropolitan rated area,—and on the 1854 gross City of London Sewers Rate assessment rental, 1,241,280*l.* and on all future increments thereof, would, he believes, supply ample means to pay the annual interest of 3,500,000*l.* raised by the issue and sale on the Stock Exchange from time to time as the money may be required, of *Metropolitan and City Sewers Bonds*, to carry out the great works in question. We some years since pointed attention to a similar mode of "realizing great public improvements." Any feasible plan of effecting so great and essential a work as the main sewerage of the metropolis, and the cleansing of its noble river, is worthy of anxious and immediate consideration, for the evil to be remedied is rapidly and intolerably on the increase, and it *must* be abated, and that without further loss of time.

THE LIZARD SERPENTINE.

SOME time since we called attention to the Serpentine Stone obtained from the Lizard district of Cornwall. Although the stone called Serpentine has for many years past attracted occasional notice, it is but recently that commercial enterprise has been energetically directed to the development of the district in which it is principally found. The failure of many, indeed of all, of the attempts formerly made to introduce the material into general use produced, as a natural consequence, a prejudice of which the result has been, that an ornamental stone of very great pretensions has been hitherto condemned either as altogether useless, or adapted only for exceptional application. The brittleness and unsoundness of the stone found on the surface, and the varying results of numerous chemical analyses, induced geologists, as well as practical men, to conclude that these defects and a want of equal consolidation of component parts, were inherent in the material; and it was reserved for

late Sir Henry de la Beche to suggest that these advantages would in all probability be overcome if arries were opened to some considerable depth, and ne obtained which had not, like that hitherto nufactured, been subject for ages to the influences ir and water.

We are assured that the justice of this opinion has n fully proved, and are informed that the quarries the Lizard Serpentine Company having, during the t twelve months, been opened by powerful Derrick nes, to a depth of from 40 to 50 feet, and the erincumbent mass of loose and unsound stone ving been thrown over the cliffs, the company re had the satisfaction of coming upon extensive ls of consolidated rock, which are worked in the ne manner as quarries of granite. The size of the cks raised formerly, varied from 2 to 10 feet, but are told that the masses have increased to so great extent, that it is now frequently found necessary to ak them up before they can be removed.

The stone was supposed to be not only brittle in e extreme, but equally hard with granite; and it s considered that the expense of manufacturing uld far exceed that of working the marbles used in s country. Experience has again proved these ebodings to be incorrect. Architects have long en acquainted with the extreme beauty of the aterial. The Lizard Serpentine is distinguished om that obtained in other parts of the world, by e variety and vividness of its colours, and the in-rsecting white lines caused by veins of steatite, which ere both unsightly and a source of weakness, are t found in the stone obtained from the quarries of e Lizard Company. The serviceable stone runs in ds varying from 4 to 40 feet in width, and the ocks are of the irregular form in which statuary arble is found.

HE ARCHITECTURAL CLASSES—UNIVERSITY COLLEGE, LONDON.

ON Saturday, the 30th of June, the following rizes and testimonials were announced and distriated at University College, to the classes in architecture and construction, as awarded by Professor onaldson. The Right Honourable Lord Monteagle resided.

FINE ART.—*First Year's Course.*

Prize and first certificate—Alfred L. Spencer.

CERTIFICATES OF HONOUR.

Second certificate—Walter Kelsey.
Third certificate—Angelo Bachhoffner.

Second Year's Course.

Prize and first certificate—Henry H. Smith.

CERTIFICATES OF HONOUR.

Second certificate—M. Underwood.
Third certificate—E. A. Gruning.

CONSTRUCTION.—*First Year's Course.*

Prize and first certificate—Joseph Gale.

CERTIFICATES OF HONOUR.

Second certificate—Alfred L. Spencer.
Third certificates—(equal)—Edwin Lawrence, W. Hooper, and Angelo Bachhoffner.

Second Year's Course.

Prize and first certificate—M. Underwood.

CERTIFICATES OF HONOUR.

Second certificate—Henry H. Smith.
Third certificate—E. A. Gruning.

MINING SURVEYORS' CHARGES.

BRAY *v.* READ AND LEALE.

IN the Court of Exchequer, at Guildhall, on Wednesday, July 4th, before the Lord Chief Baron and a special jury, a rather startling conclusion was arrived at as to the proper amount of remuneration for a mining surveyor's services, the particulars of which I beg to hand you, being, as I confess, unable to determine by what ingenious manner of addition, subtraction, multiplication, or division, the special jury arrived at the particular amount which they awarded to the plaintiff. It appeared, from the statement of counsel, and the evidence brought forward, that Mr. William Bray was, in September, 1853, employed to proceed to the State of Tennessee, U.S. America, on behalf of Mr. Braine, to examine and report upon copper mines in that district, for which service he was to be paid the sum of 400*l.* together with his expenses there and back, and while resident in America. Shortly before starting upon that mission, he was solicited by the defendants, Read and Leale, to examine and report upon another mining property, situate about one mile and a half distant from Mr. Braine's property, and which the defendants were in treaty to purchase. A written agreement was drawn up, signed and handed to plaintiff before his starting,—"a blank" being left for the amount to be charged; and it was verbally agreed by the defendants, with him, that he was to fill up the amount himself. It was proved in evidence that the plaintiff satisfactorily performed the duties undertaken for both parties; that the defendants printed and circulated extracts from his report (without his name appended thereto) in the prospectus of the proposed company, and now set up as a defence, "Not indebted," for that plaintiff was under an engagement to his first employer to report for him only! This defence broke down; and the Judge in charging the jury stated it as his opinion, that although no particular sum was agreed to be paid to plaintiff, yet as it was clear that defendants had availed themselves of his services, he was entitled to remuneration.

Plaintiff called, in support of his claim, Mr. B. P. Wilme, civil engineer and surveyor. Mr. Wilme's maximum pay to a mining surveyor for examining and reporting upon mines, would be ten guineas per day.

Mr. Elijah Galloway, who was also called by plaintiff in support of his demand of 575*l.* for work and labour, stated that he (Galloway) had made underground surveys of mines, and that his charge would be five guineas per day.

For the defence a witness named Wood proved, on oath, that he was on the ground with plaintiff "all the time" he was engaged in making his examination, and the time all put together did not exceed two hours, but was rather under. The special jury found a verdict for the plaintiff, and awarded him 175*l.*!

A LOOKER-ON.

Miscellanea.

ST. JUDE'S CHURCH, MILDMAY-PARK, ISLINGTON.—This church, already mentioned in our pages, has been consecrated. The site, which is near Bill's-pond-road, was presented by Messrs. Sandoz and Brown. The church was designed by Mr. A. D. Gough, and the builders were Messrs. Dove, Brothers, of Islington. The external facings are formed with random Kentish ragstone, relieved with dressings of Bath stone. It is a cruciform church, and has a tower surmounted by a spire of Bath stone, 110 feet high. The latter is enriched with crockets at the angles, and springs from pinnacles which ornament the tower. The interior displays an open timber roof. The entire cost of the church will be about 5,000*l.* Adjoining, and nearly finished, is a parsonage-house, erected also by Messrs. Dove, which accords in style with the Church Schools, to be built as soon as funds can be raised. The whole group will be a considerable ornament to this very improving neighbourhood.

THE IRON TRADE.—No new failures have been announced since our last notice, and it is hoped the worst is over for the present. There is not the least likelihood of any advance in price, however, as yet.

PROFESSIONAL REUNIONS.—Mr. Gutch received a number of his professional friends, chiefly district-surveyors, at dinner a few days ago, including Professor Donaldson, Mr. Kendall, Mr. Henry Baker, Mr. Thomas Little, Mr. Snook, Mr. Foxhall, Mr. Good, Mr. William Donaldson, Mr. Howell, Mr. T. H. Wyatt, Mr. Pownall, and others. Such meetings tend to the extension of that kind feeling which ought to exist among members of the profession. Sir Charles Barry gave a similar dinner a few weeks ago, when, in addition to several named above, Professor Cockerell, Mr. Poynter, Mr. Banks, and others, were amongst the guests.

WOLVERHAMPTON SCHOOL OF PRACTICAL ART.—The first annual meeting of this institution was held on Friday in last week, when there was a large and highly respectable attendance of its friends and members, to receive the first annual report and financial statement of the council, and to appoint office bearers for the ensuring year. The report stated that the attendance and fees during the past year had continued steadily to increase, and the following statement was made of the average attendance of pupils:—

	Pupils.		*Fees.*		
First quarter.....	72	.....	£27	7	6
Second ditto.....	106	.....	37	19	9
Third ditto	108	.....	45	9	6
Fourth ditto	120	.....	51	14	0
Total.....			£162	10	9

The annual subscriptions amounted to 134*l.* 8s.; so that the whole income was 296*l.* 18s. 9d. There was a balance, however, against the treasurer of 35*l.* 8s. 10d. many expenses having occurred during the first year which would not appear again. Among the students who have attended the school during the year, were eleven architects and surveyors, three brassfounders, sixteen builders, joiners, and cabinet-makers, two draughtsmen and artists, six engineers and machinists, one locksmith, two moulders and patternmakers, five house-painters, thirteen pupil teachers, five schoolmasters, and thirty-seven youths not apprenticed to any trade. The prizes were distributed after the report was read, and the meeting addressed by the chairman and various other gentlemen.

VALUE OF A SURVEYOR'S SERVICES AT TENBY.—A special meeting of the Local Board of Health, at Tenby, was held on Friday before last, for the purpose of electing a surveyor, who is to give his whole time and attention to the business, for a salary of 25*l.* per annum! Nevertheless, there were no less than five applicants, George Mends, John Smith, G. Stone, J. Lewis, and 'Adolphus Fitz-Sniggins.' The application of Mr. Fitz-Sniggins, however, was a well-deserved satire on the corporation, who constitute the Board. Mr. E. Mends, the collector to the Board, was the successful candidate. 'Fitz-Sniggins's' application merits notice. "By profession," he says, "I am a draper, and from the frequent opportunities I have had of using the yard, think myself fully qualified to undertake any duties requiring a practical knowledge of logarithms, mensuration, and land surveying. With respect to my personal bearing, be under no apprehension. I shall always pay the greatest deference to members of your worshipful body, and my unremitting attention will be directed to *your* happiness, profit, comfort, and convenience. . . . Should *your* drains, &c. become a public nuisance, or *your* wares impede the traffic in the streets,—against *you*, of course, such fortuitous circumstances will not be recorded."

THE "TIMES'" SPECIAL CORRESPONDENT.—Every one has read the brilliant letters of Mr. William Howard Russell, the Special Correspondent of the *Times* in the Crimea; and, without doubt, every one will be pleased to hear that the entire series has been placed in the hands of Messrs. Routledge and Co. for immediate publication. This remarkable Chronicle of the War—from the time of the British Army leaving Southampton to the very latest events—is of important interest in every point of view, no less from having first called the attention of the English nation to the state and management of the army generally, and produced those great and entire changes in its organisation which contributed so greatly to its subsequent successes, than from its enthralling attraction as a powerfully-written, intense, and graphic description of the terrible drama now being played in the Crimea.

SUSSEX FORTIFICATIONS.—Works of considerable importance, besides the numerous martello towers, &c. already in existence, for the defence of the southern coast, are now in progress in Sussex, the expenses of which were set down in the ordnance estimates at 10,000*l.* A new battery is in course of erection at Cuckmere: when completed, it will mount six 24-pounders. At Blatchington and Newhaven new fortifications are also being erected. The latter place is becoming a port of considerable importance, and at the mouth of the harbour extensive works are in course of construction. They are to present an angular front to the sea; and internally there will be brickwork. The batteries will be composed of earthwork, 30 feet thick, rising 9 feet above the level of the eastern pier. The dimensions of the works are 112 feet from each of the angles in the interior. The magazines are of brickwork, and 50 feet square. Each front of the batteries will mount three guns of heavy calibre on swivels. At Littlehampton new fortifications have been just completed and armed.

CHIEF PRIZE, ART-UNION OF LONDON.—For the principal prizeholder in the last distribution, Mr. Sant's picture, "The Fortune Teller," No. 378, Royal Academy, has been purchased, and will be sent to the United States.

CONSUMPTION OF SMOKE.—A digest of the information obtained, with regard to the operation of the inventions for the consumption of smoke, by the General Board of Health, has been laid before Parliament, by command of her Majesty. The following are submitted as conclusions deduced from the evidence obtained:—That the chief impediment to the prevention of smoke in factories is the insufficient boiler surface in proportion to the steam required, a deficiency which occasions waste in two ways—by the escape of heat up the chimney, and by the necessity of over-firing. That many persons have, in spite of all difficulties, succeeded in entirely preventing the escape of visible smoke, and many others reduced the time of its emission. That successful modes of preventing smoke, if there be proper boiler surface, may be adopted without infringing any patent rights, the method in question not having been patented, or the patents having expired. That the reduction of smoke to a minimum amount may be effected with comparative ease, and without the heavy expenses that would be entailed on factory owners by the absolute prohibition of smoke. That the enforcement of anti-smoke regulations would be best effected by the appointment of watch constables. That great facilities would also be afforded by the appointment of qualified officers, not connected with any patentee or boiler manufacturer, to superintend the police employed to suppress the nuisance in smoke, and to advise owners of furnaces how best to observe the law, and to report upon its infringement.

MEMORIAL WINDOW IN ST. PAUL'S EPISCOPAL CHURCH, DUNDEE.—A large stained glass window has been put up in the north aisle of St. Paul's Episcopal Church, Dundee, in memory of Charles Guthrie, esq. of Taybank. The window contains three large subjects from the Life of Christ, representing the Raising of Lazarus, Christ blessing the little Children, and Christ entering into Jerusalem. The whole are enclosed with diapered work on a pearly white ground, with borders. The style of the window is the Decorated. The tracery of the window contains figures of angels, and other ornamental work. The window is the work of Messrs. C. and A. Gibbs, London.

COPPER AND ZINC.—A return obtained by Mr. M. Williams, M.P. shows that the total quantity of copper imported into the United Kingdom in 1854 amounted to 50,940 tons of ore, 6,351 tons of regulus, 1,597 tons of unwrought copper, 1,621 tons of partly-wrought copper, 710 tons of plates and coin, and 638 tons of manufactures. The total quantity of British copper exported in 1854 amounted to 13,678 tons (exclusive of ore). The total quantity of British copper exported from the port of London in 1854 amounted to 5,434 tons, and from Liverpool, 5,920 tons. The quantity of zinc or spelter imported into the kingdom in 1854 was 19,588 tons, and 336 tons of oxide of zinc, while the quantity of British and foreign zinc or spelter exported was respectively 3,030 and 5,322 tons.

SMITHFIELD.—SIR: What is to be done with Smithfield? How many a change of sight and sound has passed upon that ground since the slow retiring wave left it the reedy wildfowl's home; and the ancient Celt viewed its neighbourhood as the natural bulwark of his infant London, or the good Prior Rahere gathered the pious and the poor beneath his hospitable roof. And then how changed when darkness closed upon the last smouldering ember of the holy martyr's fire—when the jeer of the tormentor and the low sob of the bereaved, all were hushed—and the resigned sigh of the dying saint was registered in heaven. A lingering relic of old London times has passed away with St. Bartholomew's fair, and now the heaving, bellowing mass of goaded life has uttered its last groan. What is to be done with Smithfield? A martyrs' memorial is called for, to mark the spot where dying holy men sowed the gospel seed, and watered it with their blood. Let then the glorious spot be marked with a "martyr's cross," and let it be a preaching place as Paul's Cross was of old, where, unrestrained by walls or pews, the Word of Life may be given forth to many a passer by, who only in this way can be reached. All denominations acknowledge the necessity of open air preaching. Forthwith, then, let us have a martyrs' cross and pulpit in Smithfield, from which regularly ordered preaching may proclaim the truths for which our fathers so nobly gave their lives. In our uncertain climate, a partially covered space, like some of our old market crosses, Malmsbury, to wit, might be very appropriate, or a vaulted building carried upon polished shafts of marble or serpentine: a chamber over for vestry, or for a block, might be included.—"NON NOBIS."

ARBOREAL RECORDS OF BUILDINGS.—May I be allowed to offer a few remarks upon some suggestions that have appeared in the *Builder* on this subject. Without wishing to cast a shadow of ridicule on these suggestions, but fully appreciating the motive as to forming, by means of trees, lasting (?) records, or representations, of some of our greatest works, I cannot but feel that we should be deviating from the path of taste were the principles enunciated in those suggestions referred to as to planting) attempted to be carried out. It is highly desirable that all embellishments in the way of plantations, or planting of any kind, should be founded on the principles of *true taste*, and should be under *no law* but that of nature. I do not see how it is possible to adhere to this principle, in the fashioning out with a mass of trees a model of an architectural structure, so as to afford an approximate outline, or give to the eye the semblance of the object intended. I feel sure that your correspondents cannot desire to see such effects as were produced in the days of "Capability Brown"—the days of straight lines and angles, of plants clipped into such formal and preposterous shapes, or as given in Petruchio's language:—

> "What! up and down carved like an apple-tart;
> Here's snip, and nip, and cut, and slish, and slash,
> Like to a censer in a barber's shop."

So that the beauteous forms of nature were in many gardens almost unknown. One of your correspondents, in speaking of representing a church, proposes to plant oaks for buttresses, elms for pillars, and soon, evidently thinking that trees will grow equally and with as much uniformity as the walls of a building would rise under the hands of the workman,—"Oak has always answered well, as a buttress in the wooden walls of Old England." I do not anticipate it would be so successful as an arboral buttress.—H. M. R.

ART AND THE LORD MAYOR.—Sir Francis Graham Moon and the Lady Mayoress, gave a dinner to the Royal Academy, at the Mansion-house, on Saturday, the 7th instant, and invited the presidents of other bodies of artists and cognate societies, to meet them, together with several known collectors and friends of art. One hundred persons sat down to dinner, including several ladies. The idea was good: it was a very interesting meeting, and a little more cleverness in the selection of toasts would have made it a great success. Sir Charles Eastlake (who spoke very well), Earl Stanhope, the Earl of Perth, Lord Harrowby, Mr. H. T. Hope, Sir R. Murchison, and Mr. Beckett, M.P. were the speakers.

NEW RAILWAY.—The Londonderry, Seaham, and Sunderland Railway, a short line of six miles, connecting Sunderland with Seaham Harbour, and also the Hetton, South Hetton, Seaton, and Londonderry collieries, was opened for passenger traffic on Monday week, when upwards of 1,000 persons passed along it free. The line has been executed at a cost of about 20,000*l*.

ON THE PROBABLE ORIGIN OF MALARIA.—The following remarks are quoted from an article "On the probable Origin of Malaria, and the specific action of Coal-tar, Naphtha, and other Hydrocarbons," by Mr. L Thompson, in the *Journal of Gaslighting* for June:—"When a common water-bottle, or *carafe*, is filled with ice and water, and suspended in a warm and damp situation, it immediately becomes coated with dew, which collects in it till drops of water fall from the bottle; and if these are allowed to accumulate in a little phial placed to receive them, we have at once a solution of the organic impurities existing in the air of the surrounding locality. Thus, if this had been an inhabited room, a sewer, the ward of an hospital, or the open air, we may expect to learn something by examining this water. Chemically, however, there is nothing to be learnt, at least by any test which I know how to apply; but with the microscope it is very different. . . . The microscopic observer will sometimes notice the formation of a class of confervous plants and infusorial insects in the condensed water, although when first collected nothing can be seen. This result, far from being uniform, is, however, quite exceptional, and will not be found to have any connection with the seeming putrescence of the locality where the water has been collected: the foulest sewer may give no trace of animal or vegetable life, whilst a mass of inodorous mud may give a fluid absolutely alive, as it were, after being kept for only a few hours. It has long been known that the ova of infusorial insects exist in most solid and fluid bodies, but I am not aware that these substances have been detected in the atmosphere, and as, according to my experiments, they prevail only in particular spots of a moist nature, I have suspected that to these animals are due the origin of what has been called malaria, or the presumed generation of certain contagious or epidemic diseases. The object, therefore, will be to examine carefully the water collected in such diseased districts, in hospitals, and from the breath of patients suffering under particular affections; to determine whether the appearances thence obtained indicate varieties of *infusoriæ* and *confervæ*; and, generally speaking, to test the effect produced by mixing small quantities of different re-agents with portions of the water about to be set aside for experiment. I have found that when water of this kind, which alone generated an abundance of vitalised structures, has been mixed with a single drop of creosote water, coal-tar water, camphor water, or water which had been in contact with oil of cloves, no change whatever has occurred in it after many days' exposure to warmth; whereas a small quantity of fluid albumen has rather hastened than retarded the growth of infusorial and confervous products; thus seeming to show that the various forms of volatile hydrocarbons exercise a beneficial action in this respect which does not belong to albumen; and hence it is probable that the large amount of volatile oil continually dissipated during the warmer months of the year from flowers and plants, is a provisional arrangement of the Creator for arresting what may after all prove to be the origin of pestilence. That these oils are not produced merely for human enjoyment is clear from this, that many of them have a disagreeable odour; and the late popular prejudice which attributes to the air of gas-works a specific protective power against cholera, may, perhaps, possess more foundation in reason than is at present supposed."

A NEW SLIDING-RULE has been devised by Mr. Charles Hoare. Its chief advantages are a series of new gauge points, by which brickwork of any thickness can be converted to standard or cubic measure;—a table of constants, to facilitate the forming of estimates, and the gauge-points for polygons and circles, very clearly tabulated; with concise formulæ for the various operations, which, with the necessary gauge-points, are engraved on the face of the instrument.

LANDLORD AND TENANT.—As it does not appear to be known, that whatever a tenant plants in a garden becomes the property of the landlord, and not even a perennial flower-root can be removed by law, it may be well to mention that a case tried a few days ago in the Clerkenwell County Court has further confirmed this, the tenant having to pay for his own plants: thus a tenant is debarred from cultivating plants, for amusement and instruction, if he is under the necessity of changing his residence, unless he leaves the garden soil unbroken. None but an owner can therefore be expected to expend money on a garden as the law is imperative, and gives all to a rapacious landlord, in spite of custom and usage from time immemorial; and any improvement in form, though evident, is considered as waste.—R. D. C.

BELLS.—The new church of St. Luke's, Marylebone, Mr. Ewan Christian, architect, contains the only peal of bells in the parish. The tenor weighs 8½ cwt. The bells were cast by the Messrs. Warner, of London, under a new patent process.

ARCHÆOLOGICAL.—The British Archæological Association will hold their congress in the Isle of Wight, from August 20th to 25th inclusive. The Archæological Institute will meet in Shrewsbury during the week commencing August 6th.

LENDING-LIBRARIES IN PUBLIC PARKS.—There can be no harm in any man as often as he takes a stroll to unbend his mind after business, furnishing himself with a book for a companion. There are many moments which individuals give up to such purpose that might be thereby most usefully, and almost profitably employed. The activity of educated minds is wonderful, even in the midst of pleasure. Now there are thousands of persons not insensible to the beauties of our parks and pleasure-grounds, who yet often walk about listlessly and mopingly for want of an intellectual stimulus. I therefore think that our parks might supply a means of agreeable instruction to their frequenters,—a resource to them of reading the newspapers, periodicals, and light literature; and that if the "Woods and Forests" permitted, in one or two spots in the parks, or in one central spot, shops for lending out, at a halfpenny per head for a stated time, the publications of the day, a great benefit would be conferred on the London population. In the hot summer months it is a great pleasure to con over the news in the open air, and places which afford amusement and the cheap luxury of literature at the same time will be doubly appreciated. No one who has visited Paris, and who has often owed a pleasant half-hour to the book-stalls in the Palais Nationale, the garden of the Tuileries, &c. but would give his vote in favour of such circulating libraries in all our English parks.—F. L.

TENDERS

For the covered markets at Leeds. The estimates were for the whole of the works, including brickwork, mason's, and the ironwork:—

Bingley and Co. Leeds	£14,797	0	0
T. Walker, London	14,319	0	0
Bray and Co.	14,200	0	0
Buxton	13,068	0	0
Mahon, Manchester	12,549	5	0
Butler and Co.	12,252	19	0
Cliff	11,081	0	0
Nelson and Sons, Leeds (accepted)	10,854	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor;" all other communications should be addressed to the EDITOR, and not to the Publisher.

AGENTS WANTED for the EMPIRE ASSURANCE COMPANY, 3, Pall-mall, London. The Agents of the EMPIRE ASSURANCE COMPANY are entitled, in addition to the ordinary commissions, to a direct and substantial interest in the profits of the Company. Every Director has qualified for his office by having down 500*l.* on shares. Prospectuses, postfree, and every information, on application to
EDWIN H. GALSWORTHY, Actuary and Secretary

AN Architect and Surveyor at the West-end, of thirty years' practice, holding appointments, has a VACANCY for an OUT-DOOR PUPIL, who would have peculiar advantages and other privileges.—Address, B. A. Mr. Griffin's, Stationer, 6, Crawford-street, St. Marylebone.

TO PARENTS AND GUARDIANS.
AN Architectural and Surveying Firm holding several public appointments, require an ARTICLED PUPIL in the office. An industrious youth would have every opportunity of acquiring a practical knowledge of the profession. Premium moderate. Apply in the first instance, to A. B. 16, St. James's-square, Nottingham.

TO JOINERS.
WANTED, a first-class WORKMAN who is competent to take quantities of joiners' work by the piece, and employ other workmen under him. Constant work on a comfortable shop to any one qualified as above, who can be well recommended.—Apply in first instance by letter only, stating where last employed, to A. A. Office of "The Builder."

WANTED, in a Surveyor's Office in the City, a CLERK, not less than 25 years of age, a tolerable draughtsman, and fully competent to take out quantities. As the Principal is much from home, a gentleman of industrious habits, and possessing these qualifications, is indispensable. Address, P. W., stating real name, age, where last engaged and salary required, care of Messrs. Cockshaw and Co. Horse-shoe court, Ludgate-hill.

WANTED, for the Country, TWO or THREE good STONE-CARVERS; also two or three good MASONS, who have been accustomed to roughing out for carvers. Apply to Mr J. R. WILLIAMS, 94, Lombard-street, Manchester. N.B.—A vacancy for one or two pupils.

WANTED, a first-rate CABINET-MAKER, who perfectly understands fret-cutting.—Apply by letter, giving reference, stating salary, &c. to G.S. Royal Panopticon, Leicester square.

TO WORKING CARPENTERS AND JOINERS.
WANTED, immediately, a number of CARPENTERS, used to repairs of farm buildings, &c. and also a few good bench-hands. Apply to W. ASHMOLE, Builder, Ilford, Essex.

TO CARPENTERS, JOINERS, AND BUILDERS
WANTED, in a country business, a MANAGING MAN, who has had experience in planning, estimating, and carrying out general work, having full control of men and materials; also a good mechanic, and willing to fill up leisure time with light work, and if suitable, his situation will be permanent. Apply, A. Post-office, Hertford, with reference.

TO ARCHITECTURAL DRAUGHTSMEN, &c.
WANTED, in the country, a person of steady business habits, capable of taking the MANAGEMENT of an ARCHITECT'S OFFICE. He must be well acquainted with every branch of the building business, and a plain, clear draughtsman, and good writer.—Address, A. B. C. Post-office, Shrewsbury.

BOSTON WATERWORKS COMPANY.
WANTED, a practical Working Man accustomed to WATERWORKS, to undertake the entire management of those at Boston. He will be required to superintend the reservoir, filter beds, and other works of the Company (about 12 miles from Boston), to put in services, &c. Application, stating salary, and accompanied by testimonials of character and ability, to be forwarded to Mr. STANILAND, Cork to the Company, at Boston post-free, on or before MONDAY, the 23rd instant.
Boston, July 10, 1855.

TO GRANITE QUARRY-MASTERS AND OTHERS.
WANTED, a SITUATION, by the Advertiser, who has superintended the working of a granite quarry for the last seven years, where there are 400 men employed, principally in the London trade. He is a stone mason by trade, can make working drawings, take out quantities, and has contracted for all the work done in the quarry for the last seven years, from a London pitcher not to all kinds of masons' work. No objection to superintend a job of heavy masons' work, or take one by the piece. First-rate reference.—Address, GRANITE, 2, Chepside, Taunton, Somerset.

WANTED, by a Young Man, aged 24, a PERMANENT SITUATION as Plumber, Painter, and Glazier. Good references.—Address, T. P. T. 2, William-street West, Harmondsworth, Hampstead-road.

WANTED, permanent and confidential EMPLOYMENT, where a good practical knowledge of carpentry and joinery, and general business is required. The advertiser is willing to be generally active and useful. Aged 32; well educated and connected. Good security and references as to ability, strict sobriety, honesty, &c.—Address, A. B. 39, Market-street, Newington causeway.

TO PLUMBERS AND BUILDERS.
WANTED, by a Young Man, aged 21, CONSTANT EMPLOYMENT as PLUMBER'S Turned Hand.—Address, B. H. 10, Robert-street, Bedford-row, Holborn

TO BUILDERS.
WANTED, a SITUATION as SHOP, or OUT-DOOR FOREMAN of CARPENTERS, or to take the charge of a gentleman's estate, or anything where confidence is required, by one that has been for several years in business for himself. References can be given if required.—Address, G. P., Office of "The Builder."

TO BUILDERS AND OTHERS.
WANTED, by a steady and respectable Young Man, a constant SITUATION as PAINTER, PLUMBER, and GLAZIER. Wages not so much an object as permanency.—Address F. H. FRASER, 56, Judd-street, New-road.

WANTED, by the Advertiser, a SITUATION as MANAGER at a SAW-MILLS or BUILDERS. Seven years' character, and perfectly understands his business. Apply by letter to J. B. No. 8, Commercial-place, City-road.

TO ARCHITECTS.
WANTED, by an experienced practical Man, a RE ENGAGEMENT as CLERK of WORKS. Unexceptionable references. No objection to the country.—Address, W. H. K. Office of "The Builder."

WANTED, by a Young Man, a permanent SITUATION as PAINTER and GLAZIER. He is a good mechanic, and an excellent character can be given.—Address A. B 18, Cirencester-place, Portland-road.

TO BUILDERS AND OTHERS.
WANTED, by an active and experienced Man, aged 36, a RE-ENGAGEMENT as GENERAL FOREMAN. Reference from a leading firm.—Address, B. S. 4, Old Gloucester-street, Holton Old town

THE Advertiser, who is a good General Draughtsman and Colourist, and thoroughly acquainted with the various duties of an office, is desirous of a SITUATION with an Architect.—Address, T. V. 23 Rutland-gate, Hyde-park.

TO SURVEYORS AND CIVIL ENGINEERS.
THE Advertiser wishes an ENGAGEMENT in an office of the above. Is a good draughtsman and colourist, can copy drawings neatly and accurately, and writes a good hand. Understands land surveying and levelling. Satisfactory references can be given.—Address, A. B care of Mrs. Winder, Greenhill, Harrow

DRAUGHTSMAN, Engineering and Mechanical.—The advertiser, who has worked for some of the first civil engineers in London, and latterly been engaged two years on mechanical drawings at the Enrolment office, wishes for a RE-ENGAGEMENT.—Address, G. S. L. 10, Windsor-terrace, Pimlico.

TO ARCHITECTS.
AN Architectural Draughtsman and Designer OFFERS his SERVICES in preparing finished and perspective drawings, or would be happy to assist any gentleman competing for the New Barracks. Terms very moderate.—Address, J. A. X. Mr Scollick's, Kempsford, Walworth-road.

TO CARPENTERS AND BUILDERS.
A GENTLEMAN wishes to place a SON, aged 16 with some respectable firm as IN-DOOR APPRENTICE, where he will be well taught the above business in every branch. Town or Country.—Applications, with references and terms, to A. 16, Great Marlborough-street, London, will be at once attended to.

TO BUILDERS AND OTHERS.
A THOROUGH experienced SHOP FOREMAN is OPEN to an ENGAGEMENT. He has had the entire management of a first-rate shop, where from 50 to 70 joiners have been employed, for upwards of ten years. Is well conversant with machinery, the conversion of timber, and everything connected with a large builder's establishment. None but respectable parties need apply. References of the highest order. No objection to the country.—Address, S. N. Office of "The Builder."

A TRADESMAN wishes to ARTICLE his SON aged 16 to a CARPENTER or CABINETMAKER.—Direct to J. M. Star Wharf, King's-road, Camden town.

WANTED, some GROUND on BUILDING LEASES, where the parties are disposed to make advances as the works proceed. Fourth-rate houses preferred. Address, G. G. Office of "The Builder."

THE ENFIELD ESTATE.—The CONSERVATIVE LAND SOCIETY.—IMPORTANT RAILWAY PRIVILEGES.—Persons desirous of building on this estate are informed that on the completion of two houses, a first-class free ticket will be allowed to the occupier of each house, commanding a rental of not less than 52*l.* per annum, and a second class free ticket to the occupier of each house commanding a rental of not less than 30*l.* per annum, for a period of fourteen years.—For plans of the estate and information as to lots open to choice, apply to
CHARLES LEWIS GRUNEISEN, Secretary.
33, Norfolk-street, Strand, London, July 4th, 1855.

THE SEVEN SISTERS ESTATE, Tottenham.—The CONSERVATIVE LAND SOCIETY.—IMPORTANT RAILWAY PRIVILEGES.—Persons desirous of building on this valuable estate are informed that the occupiers of each house of a rental of 32*l.* each, may obtain annual tickets, first-class, at 7*l.* 7*s.*; and second-class at 5*l.* 5*s.* for a period of seven years from the date of the same being first tenanted.—For plans of the estate, and information as to lots open to choice, apply to CHARLES LEWIS GRUNEISEN, Secretary.
Several houses are already built on this estate.
33, Norfolk street, Strand, London, July 4th, 1855.

FREEHOLD BUILDING GROUND, at OLD FORD, with Liberal Advances, to LET, suitable for fourth-rate houses, which, being much required in the rapidly-improving neighbourhood, let and sell as soon as completed.—For further particulars apply to Mr. GEORGE CLARKSON, Surveyor, 43, Penton street, Pentonville.

PREMISES, close to the Regent's-park, TO BE LET, with residence attached lately occupied by a carriage builder, but suitable for any purpose where space and an eligible situation is required. Can be entered upon immediately.—For further particulars, apply to Mr. FULLER, Auctioneer, 161, Albany-street, Regent's park

TO MANUFACTURERS and OTHERS.—TO BE LET, an LEASE, extensive and eligible MANUFACTURING PREMISES, situated on the south side of Old-street, and within five minutes' walk of the City; comprising a good dwelling house, large yard, with gateway entrance, ranges of three-story substantial workshops and other buildings, with hands-fire and sleeping-room over; the whole occupying an area of about 13,000 superficial feet on plan.—Apply to Messrs. PHILLIPS and SON, Auctioneers and Valuers, 1, Artillery-place, Finsbury-square.

FREEHOLD BUILDING GROUND.—TO BE LET, or SOLD, on advantageous terms, TWO PLOTS of GROUND, situate in the most preferable part of St John's Wood. For particulars apply, by letter, post-paid, to W. L. No. 2, Craven terrace, Paddington.

KENSINGTON GORE.—Valuable SITES for FIRST-CLASS MANSIONS in the NEW (Prince Albert's) ROAD, KENSINGTON GORE (with frontages to the park), the property purchased by the Royal Commissioners for the Exhibition, of Lots as suite for first-rate commercial with Science and Arts, may be obtained upon ninety-nine years' lease, by application at Mr. W. JACKSON'S Office, 16, Kensington Gore.

KENSINGTON PALACE GREEN.—TO BE LET, by PUBLIC TENDER, on WEDNESDAY, the 1st of AUGUST next, in two lots, SEVEN PLOTS of CROWN LAND, part of the late Royal Kitchen gardens. For terms and particulars, apply at the Office of Her Majesty's Woods, &c., 1, Whitehall-place; or at the Office of JAMES PENNETHORNE, Esq. 7, Whitehall yard

CAMDEN-TOWN CEMETERY.—BUILDING ESTATE.—TO BE LET, on Building Leases for 99 years, very eligible SITES upon the above estate having good frontages into Camden-street, Pratt-street, and Bayham-street. There is a great demand for houses and shops of the third rate in this locality, which is unsurpassed for its near proximity to the North Western and North London railway stations, and the Hampstead road. Plans may be seen, and part calls obtained by application to H. E. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall East; or to JOHN DANSFIELD, Esq. Solicitor, 26, Craven-street, Charing-cross.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth.—These spacious PREMISES, with ten arched warehouses under the Waterloo-bridge-road, TO BE LET on LEASE. There are two capital houses, with cranes and scaffolding on the wharf, and the premises, which have been used as a timber-yard for nearly forty years, are in good repair.—For terms apply to HENRY MOTT, Esq. Solicitor, 4 King's-road, Bedford-row.

TO BUILDERS, PIANOFORTE-MAKERS, CABINET-MAKERS, and Others requiring roomy PREMISES near the North Western Railway Terminus.—A compact MANUFACTURING PREMISES, with roomy workshops, large yard, shed, counting-house, and a very convenient eight-roomed dwelling-house, with double entrance to the same; the whole TO BE LET on Lease, with immediate possession.—Apply at Mr. HINGSTON'S Office, 1, Stanhope terrace, Gloucester-gate, Regent's-park

TO BE SOLD, cheap, a newly-built SIX-ROOMED CARCASE, adjoining the Carlton-road, Kentish-town.—For particulars, apply to Y. Z. 30, Molyneux street, Edgeware-road.

LOWER THAMES-STREET.—TO BE LET, by Tender, by the Worshipful Company of Armourers and Brasiers, on a Lease for Twenty-one years from Michaelmas, 1856, the extensive Premises known as the GLOBE YARD WAREHOUSES, situate in the above street, nearly opposite the Custom house. The lessee will be required to pay all taxes and rates, including sewers and mill tax rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land tax being redeemed; and the lease will contain the covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd of OCTOBER next, where parties attending may be required to sign the same the following day, at HALF-PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.
JOHN PORTEUS, Clerk,
5 St Andrew's-court, Holborn.

NEWBURY, BERKS.—TO PLUMBERS, GLAZIERS, PAINTERS, &c.—TO BE LET, all those capital BUSINESS PREMISES, for many years in the occupation of Mr W BOWYER, deceased, whose lease has expired. The premises are well adapted for the business, and will be let at a moderate rent.—Apply to Mr. KING, Globe Inn, Newbury.

HOUSE PROPERTY.—Wanted to invest several thousands of pounds in the PURCHASE of FREEHOLD or LEASEHOLD HOUSES. Builders having eligible properties for sale are invite to send full particulars to Mr. JOHN TOZER, No. 16, Walbrook, City.

NORWOOD, near the Crystal Palace and West-end Railway. TO BE LET or SOLD, with immediate possession, about EIGHT ACRES of most valuable FREEHOLD BUILDING GROUND, with a large family residence, situate near an intended station on the above line, and affording unparalleled advantages to capitalists and builders desirous of erecting a workingman's suburban village. The land abounds with brick earth, capable of yielding a supply of bricks more than adequate to the requirements of the estate, and which surplus to a large extent might be required by the railway company.—Apply to Mr. J. WOODCOCK, Architect and Surveyor, Adelaide-chambers, Gracechurch street.

FREEHOLD LAND for SALE.—For SALE, a most eligible ESTATE, of about 28 acres, in one of the most central and flourishing towns near London. The soil is dry and excellent, the situation proverbially salubrious, and close to a railway station, and the ground is studded with fine and small, extremely great. The houses are taken before they are finished, and it is well known that builders have only to build good houses to insure their being let directly. It is a situation in which the cream of a building or land speculation would be secured. Shares would be freely taken. The country is well wooded, and the views from the estate beautiful, and the transit to London only forty minutes. The estate will only be sold in one lot, but several parties are ready to join in taking portions. An enterprising builder or two is a man to find the best encouragement.—Apply by letter only, to B. C. Messrs. Davy's, 137, Long-acre

BUILDING LAND TO BE LET, at
HALLSVILLE....Term 1,000 years, for small cottages.
CANNING TOWN " 1,000 " for small cottages.
NORWOOD..... " 1,000 " for villa residences.
STRATFORD ..... " 100 " for small cottages.
POPLAR..... " 98 " for forth-rate houses.
Advances 70*l.* to 100*l.* at 5 per cent. on each cottage.
Apply to Mr Wm. ELLISON, Architect, Stamford road, Lumehouse

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddington Estate, of the value of 50*l.* per annum, will be entitled to a Free First-class Railway Ticket; and every house of the value of 40*l.* per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 255, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery business disposed of, to favour him with the particulars for registration in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO ENGINEERS, MILLWRIGHTS, AND OTHERS.
PARTNER WANTED.—A Young Man, having a business in the above branch, established for some years, would be glad to JOIN an INDUSPRIOUS MAN, who can command from 400*l.* to 500*l.* to meet the requirements of an already increasing business, and which, from position and circumstances, can scarcely be put to any extent. References exchanged.—Apply to AUGUSTUS SMITH, Auctioneer to Engineers and the Metal Trades, 255, Blackfriars-road, two doors from Holland-street

SERPENTINE. — The Lizard Serpentine Company manufacture and also sell stone in block or slab. The stone now raised is from the lower beds, and as sound as the coloured marbles with which it competes in price.—Chimney-pieces, columns, fonts, &c. &c. on view at the Show-rooms, 29, Surrey-street, Strand.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.
THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIALS.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

By Her Majesty's — Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter.—London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS J TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.
CAEN STONE.—About Twenty Tons of Small Blocks and Pieces, now lying at Lett's Wharf, to be sold at a moderate price. Terms, cash.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf, as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

MARKET-WHARF, REGENT'S-PARK-BASIN -WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Baths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Lantings, &c. cut on the shortest notice. Country orders promptly attended to.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and OTTS. N. SIMPSON, Stamford.
N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PINDER, SIMPSON, and SONS, 29, Sarrile-row, Burlington-gardens, London.—May, 1855.

YORKSHIRE STONE.
GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their celebrated HAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones out, being at once useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.
NOTE. Can be got any size, or delivered to any part by rail or water carriage.

TREVALGA SLATE.—T. B. HANNAFORD, Sole Consignee of the above beautiful material, begs to inform builders and the trade generally, that being part owner of the quarries from which he receives his ROOFING SLATES, he is enabled to offer them at exceedingly low prices. Samples can be seen on Camberwell Church, St. Matthew's Church, City-road, Royal Artillery's Rifle Gallery, Finsbury, &c. Slate Paving, in runs, 4½d. per foot superficial, Trevalga Wharf, Ratcliff-cross.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and Export orders promptly attended to. N.B. A liberal discount to the trade.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's-park.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. REEN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 25s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE. — REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in prices in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 39 and 40, Upper Belgrave-place, Pimlico.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B. are—the Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 13 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance Queen street; and other works elsewhere, too numerous to mention. A large Stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pmed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

MONEY on LOAN, at 3½ per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 100l. is to clear interest after the rate of 3l. per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.
NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

LOANS from 25l. to 1,000l. upon approved personal or other security, repayable by easy instalments, extending over any period not exceeding fifty months, are readily OBTAINABLE from the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules 6d. each copy. 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

HOUSE PROPERTY WANTED.—Money advanced by way of Mortgage on sufficient Freehold or Leasehold Property, at 5l. per cent. The Advertiser is also instructed to find investments by way of purchase in similar securities. Will avoid property immediate purchase may be effected.—Apply at Mr. SHEPPARD SCOTT'S Offices, 10, Commercial-road East.

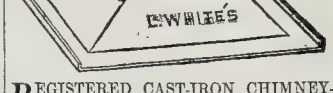
MORTGAGES and LOANS ready to be ADVANCED upon Freehold and good Leasehold Property, in sums of 200l. and upwards; also upon Tithe Rent Charges, Absolute Reversions, Annuities, Life Interests, Government and Railway Stock, Debentures, Bank and other Public Securities, &c. for long or short periods.—Apply to Messrs. TRIPP and CO. 17, Parliament-street, London.

ARCHITECTURAL OUTLINES COLOURED, for Competition or Exhibition, in the first style, by GEORGE CHILDS (removed to), 14, Sussex-street, Warwick-square, Pimlico.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper. Apply to Mr. S BARLOW, 2, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany street, Regent's-park.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (near Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.



ARTESIAN WELLS, Boring for Water, Sinking Shafts, &c.—The nobility, gentry, water-companies, towns, baths, brewers, and manufacturers of every description, may be supplied with any quantity, by DAVID GREENLEY, Civil Engineer and Patentee of Boring Tools, 10, Cumming-street, Pentonville. Pumps and machinery for raising water from deep wells, boring-tools, and well-pipes for exportation. Men and tools supplied to bore for railroads, minerals, &c.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 4s. per foot super. Together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

IMPROVED WINDOW BLINDS.—SAXBY'S PATENT ECCENTRIC CLEAT, manufactured solely by THOMAS PEMBERTON and SONS, and may be had of all ironmongers. It is the only perfect method yet introduced, of sustaining a Venetian blind, on releasing the cord, and avoiding winding on hooks. For unless blind is at rest is perfectly noiseless, as it work on centre pins, and the blind is raised and lowered by a single line without a centre cord.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner: Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.
IRON GIRDERS and COLUMNS to MODEL or DRAWING.
IRON PIPES and connections for gas, water, and liquid manure.
RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for admission of pure air through an EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, a which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 198, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

LEATHER BANDS for DRIVING MACHINERY (EDWARDS' PATENT).—Engineers, Mill-owners, Printers, and others using bands for driving machinery, are respectfully invited to inspect
EDWARDS'
IMPROVED FOLDED BANDS,
Which for strength, durability, and straightness in working, surpass any Bands at present in use.
Best STRETCHED SINGLE BANDS, with Cemented Joints.
Improved LEATHER HOSE, SUCTIONS, FIRE BUCKETS, &c.
MANUFACTORY,
32, Great Sutton-street, Clerkenwell.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in use market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his WORKS, 3, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone. CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM. — BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

11, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the best quality manufactured on the above WORKS. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 29, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf and ground, purposely to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or along-side rivers, canals, or railway stations, should be given a few days before required.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON ABSORBENT (no quantity of rain having any effect upon it), and will wash. VEGETABLE or RUBBLE Stucco Cement and Stucco Paint. CLARK and BENSOUGH, Manufacturers. Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PORTLAND and ROMAN CEMENT, TERRA-COTTA POTS, &c.—J. M. BLASHFIELD begs to acquaint the Public that he has entirely CLOSED his Establishment on the Surrey side of the Thames, and that Articles of his manufacture can only be obtained at his Works, Mill-wall, Poplar, or at his Warehouse, Praed-street, Paddington

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC" is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 9-inch paving, at 40s. per 1,000; 8-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Coznas for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 82, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester-buildings, Westminster.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 28s. per thousand; Grizzles, 24s. per thousand; Rough Stocks, 24s.; Place, 16s.—Terms, cash on delivery.—Apply to Mr. G. SNEED, Sittingbourne, Kent.

DAVISON'S IMPROVED PAVING BRICKS.—These Bricks, the cheapest and most durable pavement for stables, cattle or carriage sheds, courtyards, &c., may now be obtained at the depôt, from Mr. ROBERT DAVIES REA, Great Central Horse and Carriage Repository, St. George's-road, Southwark. CHARLES DAVISON and CO. Manufacturers, Queen's Ferry, North Wales.

WANTED, a large quantity of 2½-inch ELM PLANK, 16 feet 1 inch long by 1 foot 7 inches wide, of fair quality, and the edges sawn square. Parties Tendering for the above will please state at what per plank they will deliver them free at one of the London railway stations, the number they can supply, and how soon from the date of the order, and also if seasoned or green. Tenders to be sent by post, prepaid, to JAS. S. S. Grafton-place, Euston-square, London, on or before the 30th instant.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Peckings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS,

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Acar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all description, and the best quality WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 39, Nelson-square, Blackfriars-road.

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand from above or below bridge, delivered in the rail or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, on any quantity, alongside the Thames.

GUNPOWDER MAGAZINE.—Gunpowder Manufacturers, Quarrymen, &c. requiring Powder to be stored for the supply of Rock Excavations, Brist, Gloucester, Worcester, Stour, ort, &c. may have accommodation Cradwich, on the Bridgewater river, by applying to Mr. FREAN, Plymouth, Devon.

ACORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations.

Pine Planks, 12 ft. 3 in. by 11 in.	.....	from 3s. 6d. each.
Spruce Deals 3 in. by 9 in.	.....	" 2s. 8d. "
Yellow ditto	.....	" 4s. 0d. "
Honduras Mahogany, in logs	.....	" 6s. 4½d. per foot.
Ditto ditto, in planks and boards		0s. 6d. "
Spanish ditto	.....	" 0s. 7d. "

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on applications.

Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, Pink Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MACHINE CARVING, JOINERY, and MOULDED WORKS, Belvidere-road, Lambeth.—The Proprietors of the above works have respectfully to apprise the nobility, clergy, architects, builders, cabinet makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, finished out by the machines for the trade only. Pulpits, Lecterns, Reading Desks, Screens, Altar Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

UNIVERSAL MOULDING-MILLS, 24, Portobello road, Notting-hill.

WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer, with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable designs for Architraves and Skirting Mouldings, of which a large Stock of material is required to give their patronage and support. Also, that all Goods manufactured by the said W. L. are of the best seasoned timber, and forfeit such a price and quality as not to be surpassed by any other House in the trade. N.B. All customers having orders out at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 23, North Wharf-road, Paddington.

Malm Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

WOOD-CARVING and FRET-CUTTING. T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Ironfounders, Cabinet and Planoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H. particularly solicits the attention of Ironfounders, having had many years' experience in ornamental pattern making.—Estimates furnished.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnish for W. NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, delivered at my own door for cash only.—C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Munster-street, Regent's-park. A large quantity of PAPER-HANGINGS, CHEAP. 19s. per cwt. given for old lead.

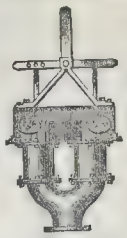
ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross.

GEORGE NOKES and CO. (late Ambidge and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for executing at lowest possible charges, every description of sawing, mouldings, scantlings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, scantlings, sash sills, mahogany, &c. Goods sawn at the mills fetched and delivered free of charge.

May 15, 1855.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the above, and all other Filters at trade prices. These filters, at one, two, three and four guineas each, yielding 50, 100, 150, and 200 gallons per item, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per item, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers, &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure; it is comparatively flexible, easily joined, has great power of resisting the effect of frost, and what is of still higher consideration, is perfectly innocuous. This combination of desirable properties is produced by lining leaden pipes with patta percha. Further information may be obtained by application to the Patentees, Messrs. STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City-road, London.



FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.

The usual allowance to the trade.

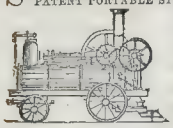
PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM

AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

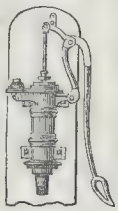
3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.



Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.



STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London, Manufacturers and Patentees.

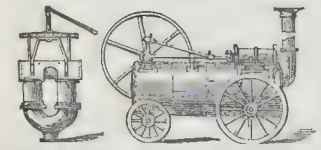
M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells. PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 32s. per doz. painted.
Ditto .... 48s. per doz. galvanized.



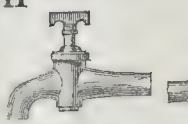
Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 70, Strand.

The LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES are FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.



PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16 horse, 20 horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work.—Apply to Messrs. MEDWIN, HALL, and Co. Engineers, 99, Blackfriars-road, Sole Patentees and only Manufacturers.—N.B. Any of these Engines may be purchased.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. Pupils Prepared Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering Drawing, and Colouring. Making Finished and Working Drawings Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms: Pupils Three Guineas per Quarter; Evening Pupils Two Guineas per Quarter, which includes Drawing Boards, T squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guilford-street, Russell-square.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

PRIZE MEDAL, CLASS 2.
HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE, used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 315, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, School, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, FOLONCEAU'S BITUMEN, PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. County Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject, and to grant licenses for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents. Applications may be made to CHARLES MAY, F.R.S. the Manager; or to WILLIAM HOWDEN, Secretary.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Mattresses, Brushes, Netting, &c. are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medals in England and America, at the Exhibition of all Nations. T. TRELOAR, Cocoa nut Fibre Manufacturer, 42, Ludgate-hill, London.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. 2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the timber usually required. 4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 10 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Marr-street, Dublin.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those direful maladies, painters and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Patent Agents in original Packages, each cask stamped HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

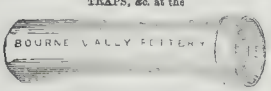
AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.



Royal Arsenal, Woolwich, June 24, 1850.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connection. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the best quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

LAMBERT'S PATENT HIGH-PRESSURE VALVE-COCK,

With Handle, Lever, and Weight, ready for fixing,

Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as by far the CHEAPEST yet manufactured.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed Spencer's new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the sizes being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders leakage or stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilson's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kennington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Clerkenwell.—And at the Pottery.

E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also, to their Paving, Sinks, &c.; Slabs of the best quality, wholesale and retail. Country builders and others supplied with all information on application to E. and W. STURGE, Bridge-wharf, City-road

N.B.—The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.
January, 1855.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—The ware followed by all to be of the best manufacture, to be superintended quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co., Great Northern-wharf, York-road, King's-cross.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Finishers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS,

manufactured upon an improved principle, discharging with extra cranks, wire, lead trap &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Extended payments to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St. Paul's, London.

Crown Glass, 18 tables, 9½. per Crate.

ISAAC PARRY'S

GLAZED STONE SEWER PIPES,
RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,
CHURCH-STREET, DEPTFORD, KENT.
ESTABLISHED UPWARDS OF 100 YEARS.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 3½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 3s. per square yard. July 2, 1855. HENRY CLUTTON, Hon. Sec.

COMPETITIONS.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the PARISH of HADLEIGH, in the County of Suffolk, is desirous of receiving DESIGNS, to comprise plans, elevations, sections, and specifications, with estimates for LAYING OUT a new BURIAL GROUND, of about 4½ acres, enclosing the ground, BUILDING a LODGE, with entrance gates, and BUILDING TWO CHAPELS. The party whose plans, &c may be approved, will at the option of the Board either have the superintendence of the works, or be paid a premium of 10l. for the plans, designs, estimates, and specifications, the same to be delivered at my Office, free of expense, without the author's name, but with a motto, on or before the 1st day of AUGUST next. A sealed letter containing the name and address, should accompany each design, which will be opened after selection made, and the plans not approved, will be returned, but the Board does not pledge itself to accept any plan.

For further particulars, together with a plan of the site, may be obtained on application to me.

J. F. ROBINSON, Clerk to the said Board.

Hadleigh, July 4, 1855.

COMPETITIONS.

COMPETITIONS.—PARISH of CHATTERIS, CAMBRIDGESHIRE.—DESIGNS for NEW BURIAL GROUND, CHAPELS, &c PREMIUM of 10l.—The Burial Board for the Parish of Chatteris offer a premium of 10l. to the Architect or other person whose DESIGNS for the erection of TWO CHAPELS (one for burials according to the rites of the Church of England, and the other for burials otherwise than according to the rites of the said church), and a SEXTON'S LODGE (to include a board-room and a room for a hearse), and for Laying out the Burial Ground, shall be selected for adoption. The parish contains about 5,2 0 inhabitants, and the Burial ground will contain from three to five acres The total cost of all the buildings is expected not to exceed 1,000l. The designs, with estimates of the costs, accompanied by working drawings and specifications complete, to be addressed to me, and left at my Office, in St. Ives, on or before MONDAY, the 6th day of AUGUST next. The co-ts of laying out the burial gr und to be estimated separately from the other works The Architect will be held bound to undertake and complete the works according to the plans for the amount of his estimate, if required by the Board to do so, within three calendar months after the acceptance of his plans; but the Board do not pledge themselves to accept any of the designs, or to employ the Architect whose designs shall be accepted. By order of the Board JOHN LAWRENCE, Clerk.

St. Ives, Huntingdonshire, 16th July, 1855

BENNETT PARK, BLACKHEATH.—The PLAN SELECTED for laying out this Estate for Building is No. 42, by Messrs WEHNERT and ASHDOWN The rest may be had, after Monday next, from Mr. BENNETT, Watchmaker, 65, Cheapside.

HART AND SON,

IRONMONGERS AND MANUFACTURERS,

53, 54, 55, & 57, WYCH-STREET, STRAND

An Illustrated Catalogue on receipt of four postage-stamps.

LARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon Ovens. It is adapted to other descriptions of Furnaces, such as Marine Boilers, Coppers, Coke Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions extant in subduing the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS BROTHERS, Nine Elms, London.

Address, THE SMOKE-BURNER COMPANY, Nine Elms, London.

No. 1061, Class 6, Section 16 BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs Rylands and Sons' Books, Papers, and Bank notes preserved in one of CHUBB'S SAFES, after a fourteen hours' exposure to intense heat COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"94, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS.

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girders and brick arches, and as bringing the great desiderata of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one

Further information may be obtained of the Proprietor of the patent.—Mr BARRETT, 13, York-buildings, Adelphi

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

MARK BERRY, established 1850, practical ZINC and GALVANIZED IRON WORKER.—My motto is cheapness, durability, workmanship and punctuality. I per cent worker and to all parts of the kingdom. Flats, roofs, and verandahs, covered with zinc and galvanized iron. Pipes, gutters, heads, and all kinds of zinc work. Bath manufacturer. Large size open bath for 2s. 3 feet 3 inches long, 20 inches deep. at MARK BERRY'S Whitelapel Works, Whitechapel Churchyard. Orders by post punctually attended to

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always in view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished

Island Foundry and Iron Works, Millwall, London.

Offices: 12 Fenchurch-street, City.

PATENT GALVANIZING and CORRUGATING IRONWORKS. Improved Process

WORKS—GLASS-HOUSE YARD, opposite the Entrance to the London Docks

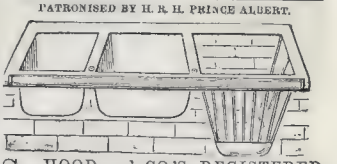
THE TOUGHNESS AND MALLEABILITY of the Iron being preserved

ESTIMATES given for IRON ROOFS, Corrugated Sheds, Houses, &c.



A Discount allowed to the Trade.

COTTAM'S NEW PATENT for STABLE REQUISITES.

COTTAM and HALLEN, of Winsley-street, are the ORIGINAL INVENTORS of this arrangement of MANGER, RACK, and WATER TROUGH as ONE FIXTURE; they are universally approved of, and obtained the Great Exhibition Prize Medal. The New Patent embodies all the improvements which, from practical experience, have been found desirable. No well-managed stable should be without these fittings. Economy, durability, appearance, cleanliness, safety comforts to the horse whilst feeding, and being rendered impervious to infection, are some of the advantages of Cottam's Improved Fitments. May be had either plain, galvanized, or enamelled. Every article for the harness-room and stable kept in stock.—Descriptive catalogues and estimates on application to COTTAM and HALLEN, 2, Winsley-street, Oxford-street.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled

Castings Warehouse removed from 31 to 33, Upper Thames-street.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 4s 8d. This achievement in heating by hot water is unprecedented

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron bridge.

DR. ARNOTT'S SMOKE-CONSUMING FIRE-GRATE is manufactured by F. EDWARDS, SON, and CO. 42 Poland-street, Oxford-street, where one may be seen in daily use. The advantages of this grate consist in the smoke being perfectly consumed, no chimney sweeping being required, and a saving of from 40 to 50 per cent. in the cost of fuel.—Prospectuses, with testimonials, sent on application.

ESTABLISHED 1817

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Ware-house, 11, Horse-street-road, and 1, New Bond-street, Westminster.—Contractors, Builders, &c. supplied with General Ironmongery at the lowest possible prices

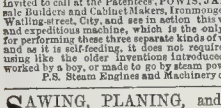
JOHN HENDERSON PORTER,
ENGINEER AND CONTRACTOR,
IRON BUILDING AND ROOFING WORKS,
GAS-STREET, BIRMINGHAM.

LONDON OFFICE—1, RICHES-COURT, LIME-STREET.



KINGSTON'S PATENT WHITE METAL, for bearings of marine, stationary, and locomotive engines, connecting rods, motion blocks, and any other machinery, where metal bearings, or fixings are required. The metal has been in use for upwards of two years, has been proved, and pronounced by eminent engineers to be the best article, without exception, that has ever been invented for the purposes above named. — Orders addressed to Mr. WILLIAM LANGFORD, Agent, at the Manufactory, Clay-hall Works, Old Ford, Bow, London, will receive prompt attention.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', POWIS, JAMES, and Co. Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, conchhouse, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch.

BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels Riggers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

TO ARCHITECTS AND BUILDERS.
PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelhouse-lane, Birmingham.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stocks, Taps, and Dies, and all kinds of Gas Fittings.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab Marble mortars, &c.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Extra Terrace, Millbank, to his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N B The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

SERPENTINE. — The Lizard Serpentine Company manufacture and also sell stone in block or slab. The stone now raised is from the lower beds, and as sound as the coloured marbles with which it competes in price.—Chimney-pieces, columns, fonts, &c. &c. on view at the Show-rooms, 20, Surrey-street, Strand.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall Wharf, Parliament-street, London. To SCULPTORS MARBLE MASONS, & BUILDERS.—Twenty-eight blocks of Statuary, Sicilian, &c. now landing at Whitehall Wharf, ex Tasso'wid, from Leghorn. Mr. FRANKLIN begs to call attention to the above; also to his extensive stock of Marble in blocks, consisting of Statuary, Vein, and Sicilian, Irish Black and Green, Dove, Bardilla, Sienna, Brocatella Rouge Royal, St. Anne's, Emperor's Red, Black and Gold, &c. &c. which he is enabled to offer at reduced rates, on advantageous terms.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hareshill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

By Her Majesty's Royal Letters Patent.
SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOAR, 4, Millbank-row, Westminster.—This Granite was used exclusively in the Nelson Monument, Trafalgar square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office: 246, High-street, Southwark, near the Townhall.
CAEN STONE.—About Twenty Tons of Small Blocks and Flags, now lying at Lett's Wharf, to be sold at a moderate price. Terms, cash.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarrymen, continue to supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Essendine, or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and OCTS. N. SIMPSON, Stamford.
N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PINDER, SIMPSON, and SONS, 20, Saville-row, Burlington-gardens, London.—May, 1855.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck loads of five tons. Pavings, Landings got out to sizes. Step Copings, &c. &c. supplied on most advantageous terms by railway and with despatch. Prices sent on application.

YORKSHIRE STONE.
GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all Railway Stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BATH STONE DEPOT, BOX STATION.—ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scaliett Block, Ashlar, Rubblework, &c. &c., supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Kent Stand, at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELLS, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price in the shape of a large and increased discount to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave-place, Pimlico.

SLATING, 22s. per square, net cash on completion.—T. B. HANNAFORD, Slate Merchant and Slater, Trevalga Wharf, Ratcliff Cross, is in a position to execute Slating to any amount in Town, for Builders of position, at the above low price. Slate Paving, 1½ inches thick, planed one side, and squared ready to lay, 4d. per foot super.

YATES'S MARBLE WHARF, Crescent-road, Millbank.—M. YATES begs to inform the friends of the late W. Yates, and all persons connected with the marble trade, that the business of the above premises will be carried on as usual, under the superintendence of an able manager. A large quantity of marble slab of all kinds, also a good stock of chimney-pieces and other marble works.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 5s. per square yard. Railway Arches made watertproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834.
Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 25s. per ton.
Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PLATE GLASS AT GREATLY REDUCED PRICES.

THE UNION PLATE GLASS COMPANY,

RESPECTFULLY INFORM THE TRADE, THAT IN ORDER TO MEET THE PRESENT DEPRESSION, THEY HAVE MADE A VERY CONSIDERABLE

REDUCTION IN THE PRICES OF POLISHED PLATE GLASS

FOR GLAZING PURPOSES.

Lists of Prices may be obtained at the places named in another advertisement in this publication.

THE WORKS—POCKET-NOOK, ST. HELEN'S—JULY 2, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

CHARLES WM. WATERLOW AND CO.
MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

Every description of life and fire assurance.

Apply to the Manager, 32, Ludgate-hill.

NATIONAL PROVINCIAL PLATE-GLASS INSURANCE COMPANY. — Chief Office, 37, Ludgate-hill.—The directors, in calling the attention of architects, builders, and consumers of plate-glass, to this company, beg to point out the superior advantages it possesses over other companies of a similar character, namely, in guaranteeing glass against accident by breakage, this company agrees, in the event of a claim, that the glass so destroyed, shall be replaced with glass identical in quality and manufacture with the original. And as an inducement to carefulness on the part of the insured, a participation in the profits will be allowed, where no accident shall have occurred within a stated period. The rates for insurance charged by this company are so moderate as to enable all persons to avail themselves of the security hereby offered, against the many accidents to which plate glass is liable. Agents wanted.

THOMAS DRAKE, Manager.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way of railways, are at all times ready to communicate on the subject and to grant licences for their use. From the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and chance of litigation is avoided. The Company undertake arrangements for bringing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents.—Applications may be made to CHARLES MAY, F.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

THE STEPPING-STONE to ENGLISH HISTORY.
THE STEPPING-STONE to BIBLE KNOWLEDGE.
THE STEPPING-STONE to BIOGRAPHY.

In the same Series, price One Shilling each
PARKHURST'S STEPPING-STONE to MUSIC.
PARKHURST'S STEPPING-STONE to ROMAN HISTORY.
SADLER'S STEPPING-STONE to ENGLISH GRAMMAR.
SADLER'S STEPPING-STONE to FRENCH PRONUNCIATION and CONVERSATION.
SHIELD'S STEPPING-STONE to ANIMAL and VEGETABLE PHYSIOLOGY.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW EDITIONS OF NESBIT'S MENSURATION, LAND-SURVEYING, &c.
A New and Improved Edition, augmented by a Treatise on Levelling, in 12mo. price 6s. bound.

A TREATISE on PRACTICAL MENSURATION, in ten parts: containing—
The most approved methods of drawing geometrical figures.
Mensuration of superficies.
Land-surveying.
Mensuration of solids.
The use of the carpenter's rule.
Timber measure, in which is shown the method of measuring and valuing standing timber.
Artificers' works, illustrated by the dimensions and contents of a house.
Mensuration of hay-stacks, drains, canals, triangular ponds, mill-dams, embankments, quarries, coal-heaps, and clay heaps.
Conic sections and their solids.
The most useful problems in gauging, according to the new imperial measures.
Plane trigonometry, with its application to the mensuration of heights and distances.
Trigonometrical surveys.
A dictionary of the terms used in architecture.
By A. NESBIT.
New edition, enlarged, and greatly improved.
To which is added,

A TREATISE on LEVELLING. The whole illustrated by nearly 700 Practical Examples, and nearly 300 Woodcuts.

KEY to NESBIT'S PRACTICAL MENSURATION: containing Solutions to all Questions which are not answered in that work, with References to the Problems, Rules, and Notes, by which the Solutions are obtained. New Edition, corrected and greatly improved. 12mo. price 6s. bound.
By the same Author, New Edition, 8vo. with Plates, Woodcuts, and Five Book, price 12s.

TREATISE on PRACTICAL LAND SURVEYING. Corrected and improved, with the addition of Plane Trigonometry, including the use of the Theodolite, and Railway Surveying, Railway Engineering, Levelling, Planning, Laying out Curves, &c. by I. BAKER.

TREATISE on PRACTICAL ARITHMETIC. Part I. 3s.; Key, 6s.—Part II. 7s. 6d.; Key 7s.

INTRODUCTION to ENGLISH PARSING. 18mo. 3s. 6d.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, fcp. 8vo. price attached, 2s.

GEOMETRY as an ART; being the Second Part of Elements of Geometry and Mensuration, with Easy Exercises, designed for Schools and Adult Classes.
By the Rev. T. LUND, B.D.
Formerly Fellow of St. John's College, Cambridge; Editor of "Wood's Algebra" (8vo. 12s. 6d.), and Author of "Companion to Wood's Algebra" (post 8vo. 6s.).
Just published, Part I.

GEOMETRY as a SCIENCE, 1s. 6d. stitched.
Parts I. and II. together, price 3s. 6d. boards.
In the press, Part III.

GEOMETRY combined with ARITHMETIC (commonly called Mensuration); Part IV. GEOMETRY combined with ALGEBRA.
A KEY to the Exercises is also in preparation.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

New and improved Edition, in post 8vo. price 7s. cloth,

METRICAL CHRONOLOGY: in which most of the important dates in Ancient and Modern History are expressed by consonants used for numerals, and formed by aid of vowels into significant words; with Historical Notes and Questions for the Exercise of Young Students.
By the Rev. J. H. HOWLETT, M.A. Reading Chaplain of H.M.'s Chapel Royal, Whitehall.
Fifth Edition, with Additions.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE REV. G. R. GLEIG'S SCHOOL SERIES:
A NEW SERIES OF ELEMENTARY SCHOOL BOOKS;
Each Book (in most instances) complete in itself, price One Shilling.
INTENDED TO COMPRISE A COMPLETE COURSE OF ELEMENTARY EDUCATION.
Projected and Edited by the Rev. G. R. GLEIG, M.A.
PREBENDARY OF ST. PAUL'S, CHAPLAIN-GENERAL TO THE FORCES, AND INSPECTOR-GENERAL OF MILITARY SCHOOLS.
ASSISTED BY EMINENT SCHOLARS AND TEACHERS.

List of Thirty-one separate Works of the Series already published.

2. MY SECOND SCHOOL BOOK to Teach Me Reading and Spelling. By W. M'LEOD, F.R.G.S. 18mo. price 1s.

3. A GRADUATED SERIES of NINE COPY-BOOKS, mainly on the Method of Mulhauser, with Engraved Copy-heads, conveying useful Information, Historical, Geographical, and Scientific. By WALTER M'LEOD, F.R.G.S. Oblong 4to. price 3d. each copy-book; or 3s. 3d. per dozen.

4. SIMPLE TRUTHS, in Easy Lessons; being an abridged Scripture History, arranged as a First Reading Book. 18mo. price 6d.

5. A MANUAL of ARITHMETIC: containing a Graduated Series of Questions for Elementary Instruction. By W. M'LEOD, F.R.G.S. 18mo. price 1s.

6. EXPLANATORY ENGLISH GRAMMAR for Beginners. By WALTER M'LEOD, F.R.G.S. 18mo. price 1s.—DEFINITIONS, price 1d.

7. THE CHILD'S FIRST BOOK of GEOGRAPHY, arranged in a Series of Easy Reading Lessons. By W. HUGHES, F.R.G.S. with Woodcuts. 18mo. price 9d.

8. GEOGRAPHY of the BRITISH EMPIRE. For the use of Beginners. By W. HUGHES, F.R.G.S. 18mo. price 1s.

9. GENERAL GEOGRAPHY. For the use of Beginners. By WILLIAM HUGHES, F.R.G.S. 18mo. price 1s.

10. A HAND-ATLAS for Class Teaching, comprising Twenty-nine full coloured Maps, and containing nearly every Place mentioned in the Geographical and Historical Works of the Series. By W. M'LEOD, F.R.G.S. 18mo. price 3s. half-bound; or sewed, 2s. 6d.

11. FIRST BOOK of HISTORY—England. By the Rev. G. R. GLEIG, M.A. 18mo. Price 2s. 6d.; or, in Two Parts, 1s. each.

12. The BRITISH COLONIES. Forming the Second Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price 1s.

13. BRITISH INDIA. Forming the Third Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price 1s.

14. SACRED HISTORY. Forming the Fourth Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price 2s. 6d.; or, in Two Parts, 1s. each.

15. HISTORICAL QUESTIONS. Part I. On the Histories of England, British India, and the British Colonies, and on the "Sacred History." 18mo. price 1s.

16. HISTORY of FRANCE. By Capt. A. C. GLEIG, Royal Artillery. 18mo. price 1s.

17. HISTORY of ROME. By the Rev. R. W. BROWNE, M.A. Professor of Classical Literature in King's College, London. 18mo. price 1s.

18. HISTORY of GREECE. By the Rev. R. W. BROWNE, M.A. 18mo. price 1s.

19. THE BOOK of HEALTH. By ROBERT JAMES MANN, M.D. M.R.S.C.E.; Author of "A Guide to the Knowledge of the Heavens." 18mo. price 1s.

20. OUTLINES of EXPERIMENTAL CHEMISTRY, Simplified for Beginners. By T. TATE, F.R.A.S. With Woodcuts. 18mo. price 1s.

21. ASTRONOMY and the USE of the GLOBES. Simplified for Beginners. By T. TATE, F.R.A.S. With Woodcuts. 18mo. price 1s.

22. ELECTRICITY, for the use of Beginners: in which the Principles of the Science are familiarly explained and illustrated. By T. TATE, F.R.A.S. 18mo. price 1s.

23. MAGNETISM, VOLTAIC ELECTRICITY, and ELECTRO-DYNAMICS, Simplified for Beginners. By T. TATE, F.R.A.S. With Woodcuts. 18mo. price 1s.

24. HYDROSTATICS, HYDRAULICS, and PNEUMATICS, for the use of Beginners. By T. TATE, F.R.A.S. With numerous Woodcuts. 18mo. price 1s.

25. LIGHT and HEAT, in which the Principles of the Science are familiarly explained and illustrated. By T. TATE, F.R.A.S. 18mo. price 1s.

26. MECHANICS and the STEAM-ENGINE, Simplified for Beginners. By T. TATE, F.R.A.S. 18mo. price 1s.

27. TATE'S ELEMENTARY COURSE of NATURAL and EXPERIMENTAL PHILOSOPHY, Simplified for Beginners. 2 vols. 18mo. Woodcuts, price 7s.; or separately, in 7 parts, 1s. each as above.

28. ELEMENTS of BOOK-KEEPING by SINGLE and DOUBLE ENTRY. With Practical Explanations and Exercises on the most useful Forms of Business. By A. K. ISBISTER, M.R.C.P. 18mo. 1s.

29. ISBISTER'S SET of EIGHT ACCOUNT-BOOKS, by Single and Double Entry, adapted to the above "Elements of Book-keeping." Oblong 4to. price 6d. each account-book.

30. ELEMENTARY ALGEBRA for BEGINNERS. By W. J. REYNOLDS, B.A. Royal Military Asylum, Chelsea. 18mo. Price 1s.—KEY, price 3d.

31. THE FIRST THREE BOOKS of EUCLID'S ELEMENTS of GEOMETRY. By T. TATE, F.R.A.S. 18mo. Price 1s.

☞ Other Works in continuation of the Series are preparing for publication.

London: LONGMAN, BROWN, GREEN, AND LONGMANS.

JOHN MURRAY, Albemarle-street.

The Builder.

VOL. XIII.—No. 650.

ON Tuesday last, the Metropolitan Buildings Bill, with the exception of the schedules, passed through the House of Commons. Sir William Molesworth, Lord Seymour, Mr. Jackson, Mr. Henley, Mr. Bell, Mr. Tite, and Mr. Cubitt, took chief parts in the discussion, and various alterations were made, nearly the whole of them improvements. The exemption of greenhouses is confined, as we urged it should be, to "the necessary woodwork of the sashes, doors, and frames." Touching the exemption of all work for the purpose "of necessary repair," Sir William Molesworth promised to reconsider the clause, and it is to be hoped that he will qualify it. With every desire to obtain for owners and builders immunity from unnecessary interference, we cannot shut our eyes to the fact that the exception of "necessary repair" without any limitation would allow of large and important works being done without supervision as to their proper construction and safety in respect of fire. Thus, a great part, if not the whole of an external wall might be rebuilt, any external woodwork being restored—party timber partitions might be reinstated—party walls might have large portions removed and replaced with unsound materials—and chimneys, furnaces, and flues, might be cut into, and partly rebuilt in an unsafe manner,—works involving danger, not only to the inmates of the house repaired, but to the occupiers and owners of the neighbouring property.

Some alteration in clause 39 is asked for by the district surveyors. As it now stands, the district surveyor would be debarred entry on the very hour of the completion of the building, and anything then contrary to the Act could not be compulsorily amended.

Touching clause 25, which contains the inexpedient restriction on the eaves and cornices of overhanging roofs, we have received the following note, signed "A District Surveyor:"—

"The daily papers report of the proceedings, in the House of Commons on Tuesday, upon the Metropolitan Buildings Bill, that "some amendments of no interest to the public were made to the clauses of the Bill." Is it then of no importance to architects and the inhabitants of London, that a leading architect combined with a leading builder to move, as an amendment to clause 25, that there shall be no projection beyond the face of houses in streets (even over the ground of the owner), except open porches or porticoes not higher than 5 feet above the one-pair floor? Two noble lords, former Chief Commissioners of Works, saw, indeed, that there was something faulty here, but deferred to these high authorities; and the amendment was carried! Henceforth there must be no front balconies, cornices, pillars, pilasters, window-dressings, above the first-floor; and, moreover, the only method of making a balcony to the first-floor windows will be to make an open portico first, and afterwards remove the pillars. Alas! where are we to look for 'administrative reform?'"

We are not aware of the terms of the amendment, but if its effect be as stated by our correspondent, some means should be adopted to remedy it in the House of Lords. It would interfere most injuriously with the improvement of street architecture in the metropolis and suburbs, throwing us back to flat walls with holes in them for light and ingress.

ON "DRIERS," AND THE IMPROVEMENT OF HOUSE-PAINTERS' WORK.*

WE are sure it is not necessary to give further reasons for presenting the details which it has cost us some trouble to extract from the elaborate tabular statements of M. Chevreul. We will not attempt to point out the application of the result of each series of experiments; but they deserve every consideration from all who, like ourselves, are interested in the progress of constructive science and the advancement of art. If they do not specify in words, what must be done for the objects *we* have contemplated, they are the necessary basis without which such progress could not be hoped for; and the remaining chapters present particulars equally important to architects and decorative painters, as also to those engaged in the preparation of materials.

We have already, we trust, established safe ground as to the nature of that which is called the drying of the work—under several modifications of the vehicle or pigment used, and the character of the material and surface. We found that the ordinary carbonate of lead base, and the pure linseed oil each possessed siccative properties, and that in the case of the oil, these might be increased by time and exposure to the air, supposing it were convenient to resort to such means.

We have received testimony from practical painters to the soundness of the opinion upon which we ventured, as to the constant antagonistic influences of "driers," as regards the chief objects of painting. There is no doubt that much of the want of durability is to be traced to ignorance of such points as we are inquiring into,—or to exclusive regard for early completion of work. It has, however, been apparent, that considering the time which can generally be allotted, some proportion of "drier" is not to be dispensed with. In particular, we found, that were it the object to escape from deleterious influences entailed by the use of white of lead, by resorting to the white of zinc, —that material had the siccative property in so comparatively slight a degree, as would positively prevent trial of any of its recognized advantages. It, therefore, becomes of some importance to know what is the best mode of preparing "driers."

We shall follow M. Chevreul in his researches, leaving open the question between white of lead and white of zinc; though were we now to accept the latter base of pigments, experiments as to the *ordinary* "drier" might be thought superfluous. We therefore proceed to inquire into the influence of litharge, of peroxide of manganese, and of the mere application of heat, in rendering linseed oil siccative. It is necessary to consider the latter influence, apart from that of the metallic-oxide, to ascertain whether the heat is ordinarily applied in the best manner.

The common "drier," or litharged oil, in France, is generally made thus:—Linseed oil is heated to near the boiling point in a melting pot, and skimmed: after three or six hours, about one-tenth of its weight of litharge is added to the oil, and the mixture is again heated for five or six hours. Another method is the following:—100 kilogrammes of linseed oil, as old as possible, are heated for about six hours; six kilogrammes of litharge, and three kilogrammes of burnt umber are then added; the mixture is heated for six hours, is allowed to settle, and is decanted. The litharged oil, M. Chevreul says, is adulterated with substances which are greatly injurious to its properties. This remark may apply to the sulphate of zinc spoken of by Dr. Thomson, as required to be added to the litharge. The ordinary English method would seem to correspond with that used in France. M. Leclaire, to whom the chief credit of the introduction of oxide of zinc is due, prepares his manganesed oil thus:—Linseed oil is heated at the boiling point for five hours; then for eight hours at least, with peroxide of manganese.—It will now be discovered what are the best methods of procedure.

Experiments were made in the first four months of the year 1850, with the several oils, laid as before, on oak; and we have again tried to condense M. Chevreul's extended statements in a new table. The different kinds of oil experimented upon, are written at the heads of the columns; and the letters of reference (which correspond with those used by M. Chevreul) refer to the notes and particulars below:—

Reference to Notes:—	A	EE	E	B	CC	C	D	F	FF
Oil, how prepared:—	Linseed Oil, Pure.	Linseed Oil; boiled 3 hours.	Linseed Oil; boiled 3 hours with 1-10th of its weight of Litharge.	Linseed Oil; boiled 5 hours, over a gentle fire in a melting-pot.	Linseed Oil B; again boiled 3 hours (without addition).	Linseed Oil B; boiled 3 hours with 1-10th of its weight of Litharge.	Linseed Oil B; boiled 3 hours with Peroxide of Manganese which had been used previously.	Linseed Oil B; boiled 3 hours with Peroxide of Manganese which had been used previously.	Linseed Oil B; boiled 8 hours (without addition).

Third coat.....	3	4	2	8	6	6	6	13	
Total,—Days	108	49	7	68	50	15	17	39	

Notes and Conclusions from the foregoing Table.

Reference.

A. EE.—The oil by 3 hours boiling, becomes more siccative.

E. EE.—The oil by 3 hours boiling with 1-10th its weight of litharge, becomes more siccative than if boiled without the litharge.

B. EE.—Five hours' boiling not so advantageous as 3 hours.

CC. C. E.—Oil which has already boiled 5 hours without addition, again boiled 3 hours, undergoes scarcely any change in the siccative property, whilst it becomes more siccative if it has boiled the same time upon litharge: but it is less siccative than the oil which has boiled 3 hours with that oxide without the previous boiling.

D. F.—Oil already boiled 5 hours, boiled 3 hours upon peroxide of manganese that had served previously for a similar operation, is nearly as siccative as the oil which has boiled in the litharge under the like circumstances (C),—but it is more siccative than if the boiling on the peroxide of manganese had lasted 8 hours.

FF.—Oil which has boiled 5 hours, boiled alone 8 hours more, becomes viscid, and exacts a considerable time for drying.

Generally, these experiments established the fact that the presence of the oxide of lead, or oxide of manganese, will concur with heat in augmenting the siccative property of the oil. But it also appeared from them, that the direct ebullition of the oil with the litharge during three hours only, gave more of the siccative property than the oil would have acquired by the ordinary process,—that is to say, by a previous boiling of three to six hours, or *before* treatment with the litharge. Further experiments were therefore gone into, with regard to that matter. It then appeared:—

1. That linseed oil, which has been boiled in a glass globe in a sand-bath merely, five hours, is not more siccative than the ordinary oil.

2. That the oil which has been boiled three hours, with 15 per cent. of its weight of litharge, or of peroxide of manganese, is more siccative than the oil which has been heated five hours.—At the same time we arrive at these important facts:—

(*a*) That litharge is more siccative than peroxide of manganese.

(*b*) That litharge that has been once heated with the oil, if used for a further portion of oil, is positively

See pp. 109, 193, 243, *ante*.

more active than that which had not been previously heated.

(*c*) That peroxide of manganese which has been heated many times, has similar effects, relatively to manganese, which had not been heated.

It also appears that—

3. The oil which has undergone a heating of five hours, heated again with 15 per cent. of its weight of litharge, is more siccative than if it had been heated with peroxide of manganese.

But it is remarkable that the *excess* of activity distinguishing the litharge, and the peroxide of manganese which have been used previously in heated linseed oil, from the same ingredients in their first condition, and where linseed oil was in its original condition, exists no longer where *oil* has undergone the heating process during five hours.

Having discovered that the usual length of time occupied in heating—or rather stewing—in the preparation of "driers," was not advantageous, M. Chevreul proceeded with experiments by which was discovered the fact, that the oil exposed for six hours to a temperature of, as nearly as possible, 70 degrees, with 10 per cent. of peroxide of manganese, could be employed immediately in painting, without the necessity of adding a (or we think it should rather have been stated, *any other*) siccative Pure oil exposed the same time to the like temperature, receives also a considerable increase of the siccative property, but not to the extent discovered in the other case. The special value of the particular combination referred to is shown by results supposed to be as under. Experiments were commenced at the end of January, 1850, the coats being laid on glass. Pure linseed oil is first contrasted with the manganesed oil: thus,—

	Linseed Oil.
First coat required to dry	21 days
Second coat ditto	10 ,,
Third coat ditto	7 ,,
Total	38 days.

the other result being here stated:—

	Linseed Oil, heated six hours, at from 70 to 80 degrees, with 10 per cent. of peroxide of Manganese, which had been used previously several times.
First coat required to dry	3 days
Second ditto	3 ,,
Third ditto	3 ,,
Total	9 days.

An addition of white of zinc to the oil last mentioned, appears to give an increase of siccative property, much exceeding what it would give to the pure oil.

This branch of the subject may be wound up with the results of a comparison of oils differently treated, as under. The experiments were commenced at Midsummer, 1850, the coats being laid on glass. The oils were (using letters of reference for the columns of the table):

(A.) Pure linseed oil.

(B.) The same oil, exposed six hours to a temperature of 70 to 80 degrees.

(C.) The same oil, heated during six hours at a temperature near to the boiling point, with new peroxide of manganese.

(D.) The same oil, heated in the same manner with peroxide, which had been used twice.

Days occupied in Drying.	A.	B.	C.	D.
First coat	6	4	2	0½
Second ditto	6	5	4	4
Third ditto	5	5	4	2
Total:—Days	17	14	10	6½

The short period occupied in the drying of the first coat in the fourth column is remarkable. In some previous experiments, similar unexpected results occur where coats were laid on wood. Those cases suggested to us inquiry whether sufficient absorption could have taken place to ensure durability. It is, however, due to M. Chevreul to say that this question was not wholly neglected, for independent of the record given of the exact state of the surface on every day during the progress of the experiments (our own pages having limited us to results), in experiments tried on certain materials, the paint is specially mentioned as of slight adherence to the wood. These instances are chiefly in the concluding chapter.

Various additions have been made to the pure substances, carbonate of lead and oxide of zinc, not only in the course of extensive adulteration which is practised, but in other cases, with the idea of particular beneficial results. It may therefore be interesting to follow our author where he endeavours to find what is the sort of influence which certain bodies, mixed with one or other of the above-mentioned bases, will exercise as regards the general drying properties. He finds that sulphate of lead mixed with linseed oil is much less siccative than the carbonate,—the three coats—if laid on oak in summer—occupying nearly three times as long in the drying as three coats, similarly laid, of the carbonate. However, whilst the bulk of the excess of time was occupied by the first coat, the second coat of the sulphate dried in precisely the same number of days as that of the carbonate. A *mixture* of the sulphate and the carbonate appears to have been introduced in France about 1850. That material, M. Chevreul found would dry as well as the pure carbonate; in other words, the sulphate had received from the carbonate a considerable accession in siccative properties. But it is observed that the mixed material had some tendency to work unevenly under the brush.

Passing to the zinc base,—the *sub-carbonate* of zinc has been tried. It begins to dry more quickly than the oxide, and might therefore be supposed to afford advantages, if mixed with the latter. It has, however, the disadvantage of being "semi-transparent," and is altogether very different to the white of lead, or even to the white of zinc. Still, M. Chevreul thought advantage might be taken of the peculiar siccative property, as a substitute for the oil of manganese, which has the inconvenience of interfering with that peculiarity of the oxide of zinc, for which, at all events, it is valuable, namely, its peculiar whiteness. Experiments were commenced, therefore, on two deal doors, and in Midsummer, 1849, with the mixtures designated below, A and B:—

	Parts by weight.
(A.) Pure linseed oil	100
White of zinc (oxide) 0¾, by measure	100
Sub-carbonate of zinc, 0¼ by measure	
(B.) Pure linseed oil	98
Manganesed oil	2
White of zinc (oxide)	100

The first coat applied of each, had an equality of aptitude as regards the covering of the surface; and four hours after application the paint had taken hold. The mixture A, however, showed a disposition to dry best where most exposed to the light. On comparison at the end of a year, the door painted with A was sensibly more white than the other. Perhaps, however, the paint was less adherent than the mixture B. Yet M. Chevreul does not seem to consider the difference of much moment, since he goes at once to the advantages of the admixture,—saying, that whilst there can be no material difference as to the drying in A and B, the former has advantages with white grounds, or such light tints as yellow would be injurious to.

The effect of finely-divided powders upon the drying of a vehicle, is M. Chevreul remarks, that of accelerating the drying,—as might be expected, apart from chemical influences.

In the course of our examination into the series of experiments, we have attached, certainly, great importance to the absorption of the coating by the material painted. No artist, we are sure, will differ with us for having gone greatly beyond M. Chevreul, in desiring with the durability of substance and surface, the absence as a general rule, of all shining appearance. No doubt the brilliant and the "dead" character of surface can be used side by side, and might be so more frequently than they are, with the best effect. Nevertheless, there is good esthetic reason for the practice of finishing the best kind of work in flatted colour. Wherever there is "surface enrichment," in form or colour, or where there is moulded ornament, a general shining varnish seems to be only antagonistic to the effort of the design. Such a surface by reflecting, is necessarily unequal and accidental in its effect, and calculated to annihilate defined form. Herein, lies a disadvantage of pictures painted in oil, as compared with those in fresco,—a disadvantage which was well understood a few years since when the subject was under discussion, but which latterly seems not to have received much consideration.

We allude again to this element in our subject of investigation, because the experiments which are the last mentioned in M. Chevreul's paper, appear to be not unconnected with the end to which the discoveries of chemistry will, we hope, one day reach. On this point we hope to offer some suggestions.

ON CHRISTIAN ART.

MR. SCHARF'S seventh lecture on this subject commenced with a notice of the interior of the Sistine Chapel, erected in 1473, by Pope Sixtus IV. The name of the architect was Baccio Pintelli. The chapel measures 132 feet 8 inches by 43 feet, and from the floor to top of window arch, 57 feet 10 inches. The roof is waggon-headed. With the exception of the Chapel of St. Lawrence, built by Nicholas V. in 1450, the Sistine Chapel is now the oldest part of the Vatican. In 1474, Sixtus IV. employed the best artists of the Tuscan and Umbrian schools to paint the walls of this chapel with a series of compartments, six on each side, from the history of the Saviour and of Moses, the former being ranged on the south wall. Thus, in accordance with the established custom, the scenes from the Old Testament confronted those from the New. For example, Christ's Sermon on the Mount faced Moses on the Mount, and the Last Supper was opposite to the last commands of Moses to Joshua. The painters employed were Luca Signorelli, Sandro Botticelli, Cosimo Roselli, Salviati, Pietro Perugino, and Domenico Ghirlandajo. The lecturer quoted Vasari's account of Roselli's conduct in the Sistine Chapel: he was far inferior to the other painters, and was aware of his deficiency; but, perceiving the weakness of the Pontiff, who delighted in gold and finery, belaboured his work with gilding and ultramarine. This was so much to the delight of the Holy Father, that he commanded the other artists to spoil their works in a similar manner for his gratification. Sandro Botticelli was a pupil of Filippo Lippi, and although we know nothing of his private life, it is evident that he imitated the wild and gipsy-like style of his vicious master. He was the instructor of Lippi's son, Filippino Lippi, who worked so creditably in the Carmine chapel at Florence. Botticelli was employed by the Medici upon profane subjects. His picture representing Calumny, from the description of a painting by Apelles, is well known, and a round Holy Family at Florence, repeated also in the Louvre, is especially beautiful in sentiment and composition. The finest specimen of the master, however, is to be seen in the Accademia at Florence.

Luca Signorelli and Melozzo da Forlì, were the first successful masters of foreshortening: several groups in the frescoes by the former at Orvieto, relating to Antichrist and the day of judgment, were afterwards adopted by Michelangelo. A large fresco by Melozzo is preserved in the Quirinal Palace, at Rome; and a picture containing portraits of Sixtus IV. Platina and his Nephews, is still treasured in the Vatican as a relic of the old library. Verocchio, born 1432, was a pupil of Donatello, and himself the instructor of Perugino and Da Vinci. A magnificent work of his may be seen in the Crystal Palace at Sydenham. It is a cast from the bronze equestrian statue of Colleoni at Venice. He died 1488.

Pietro Perugino, chiefly celebrated as the master of the great Raffaelle, executed some very fine works, especially an altar-piece in the Vatican, an Ascension at Lyons, and the decoration of the Sala del Cambio, at Perugia. He was employed in Rome about 1480, upon the ceilings of the Papal apartments.

Domenico Ghirlandajo, the master of Michel-

ngelo, displayed a closer affinity to the Lippi nd Botticelli school. In the choir of S. Maria Novella, at Florence, he painted a series f frescoes from the life of the Virgin Mary. His frescoes in S. Trinità, from the history of . Francis, are particularly beautiful; and there a fine specimen of his talents in the collection f the Florentine Academy.

Of Francia, the Bolognese goldsmith, a great ontemporary painter, we possess some very fine xamples in our National Gallery and at Hampon-court.

Leonardo da Vinci, a most universal genius, nd of extraordinary accomplishments, united ith great personal advantages, was born 452, and apprenticed to Andrea Verocchio, nder whom he made such proficiency as to urpass his master, and deter him from further ractice as a painter. Da Vinci was an able culptor, working in marble, bronze, and terra otta: botany, mathematics, engineering, and rchitecture found him equally proficient; and e is said to have discovered and illustrated everal minute portions of the human body not itherto observed by anatomists. His sketchooks are still in existence; and it is to be marked that he always wrote backwards. He repared a cartoon of a fight for a standard, to orm part of the battle of Anghiari—a subject iven him to paint in the council-hall of the alazzo Vecchio, at Florence. In 1497 he nished his celebrated painting of the Last upper, at Milan, in the refectory of the Dominican convent of S. Maria delle Grazie. he motive of the arrangement of the apostles the table becomes at once evident in the uilding itself. Convent refectories are square, aving three long tables placed along the walls, aving one wall facing the prior blank. The onks sit on one side of the table only, with eir backs to the wall, so that the other side is ft open for the convenience of the servants. painting of the Last Supper was not unfreiently introduced on the blank wall, so as to ontinue the arrangement of seats all round the partment. It was usual, before Da Vinci's ne, to place Judas alone on the outer side of e table, seated on a stool, with an especially lanous countenance, and this arrangement as adopted by Giotto in Sta. Croce, and Raffaelle also in a recently discovered sco at Florence. It appears likewise in small painting in Lord Ward's collection tributed to Giotto or his school. But Vinci ranged Judas with the rest of the ostles, marking him sufficiently by his counance, the money-bag, and the old superstition having overthrown the salt. This picture s at once recognized as a grand source of udy for young artists, and especially as a ool of expression; but unfortunately, from ne imperfection in the wall on which it was nted, the picture began to decay rapidly, and y little now remains beyond a mere wreck. very fine copy, by Marco d'Oggione, made the time, and under Leonardo's superendence, still exists in the Royal Academy, Trafalgar-square. Giuliano de' Medici inded Leonardo da Vinci to Rome; but he tted that city without producing any rerkable work there beyond a beautiful paint- in the convent of Sant' Onofrio. He exled, it is said, in the arms of Francis I. in 19, one year before the death of Raffaelle. s work on painting deserves greater attention n is generally bestowed on it; but it is anged more like a receipt-book than we are ustomed to in modern essays on art.

The contemporary Flemish painters who succeded Van Eyck and Memling were mencned, as well as the works of King René, of jou, father of the celebrated Margaret, en of our Henry VI. His large altar-piece, work of remarkable excellence, is still preved at Aix. The changes in book illumina- at this period were very striking, and the ie peculiarities manifested themselves in oidery.

The rest of the lecture was devoted to the ory of engraving and printing. Mr. Scharf an by observing, that although the latter was irely dependent upon the former, the art of raving had been practised as a durable ornat from time immemorial. It was alluded to an early period in scripture; and the Nineveh sculptures and bronzes show the perfect use that was made of incised lines by the ancient Assyrians. Like the Etruscans, they employed a series of fine lines closely parallel, to give the effect of shading: sometimes the lines were crossed, and patterns were frequently relieved by thickly punctured dots, giving the effect of modern stippling. The Etruscan mirrors, and bronze circular boxes to contain their bathing apparatus, called cistæ, afford numerous examples of outline engraving; but to *print* from them and so multiply the device, does not seem to have been thought of till the days of Finiguerra, in the middle of the fifteenth century. A favourite style of ornamental engraving upon silver plates had prevailed for ages before this period, in which the cross lines, intended to look dark, were filled in with a black metallic substance called *niello*, which, being fused at a temperature not injurious to the silver plate, incorporated itself with the metal, and formed a permanent and beautiful device heightened with black.

In his fifth lecture, alluding to monumental brasses, Mr. Scharf spoke of them as *nielli* on a large scale, which were filled in with mastic varnish and black paint, instead of the more elaborate metallic composition. These niello plates were sometimes heightened with gold and enamel, and so much pains were bestowed on them as to make them eagerly sought as works of art. In those days the goldsmiths were the engravers; and, as it was natural to desire to retain some specimen of their art after the work had passed out of their hands, they adopted a very simple expedient to procure a copy. When the engraving was sufficiently advanced, and the lines had not yet been filled in with the niello composition, they took an impression in very fine earth or plaster, so that the deep-cut lines stood up in relief exactly in proportion to the engraving. Upon this, again, the workman poured melted sulphur, which being very fine, and of a beautiful metallic colour, took a perfect impression, with all the lines exactly as they appeared in the metal plate itself. The hollows in the sulphur were filled in with black colour: the surface was polished; and thus the *copy* became a specimen of the goldsmith's ability. During the process of working at his engraving, the artist was in the habit of filling in the lines of the plate itself with some black paint, mixed with water, in order to judge the better of his progress, and the colour would easily wash out when the experiment had sufficed. Accidentally, it appears that some melted sulphur was dropped upon a metal plate filled with this temporary colour, and when taken off, the sulphur was found to have received the entire device formed by the black colour in the lines, as we are now accustomed to see in ordinary prints. This accident suggested to Maso Finiguerra, the best engraver of his day, to apply paper to the plate charged with black ink before it was finally incorporated with niello.

The entire proceeding is happily illustrated by a famous niello, still existing at Florence, by a paper impression from it, preserved in Paris, and by a sulphur copy from the same, taken by double impression, formerly at Genoa, and now in the British Museum.

This niello plate, forming the front of a Pax, one of the church devotional instruments, is mentioned in the archives of St. Giovanni, and thereby ascertained to have been finished and *paid for* in 1452. As all the copies and impressions must have been taken before the final process of infusing the niello, the date is very satisfactorily determined. The price paid by the British Museum for the sulphur copy from this celebrated pax was 300 guineas. At the same sale a paper impression from a similar niello fetched the *same* price. The museum is especially rich in early paper and sulphur specimens of engraving. In sulphurs it is unrivalled.

From this period, 1542, engravers began to work for the express purpose of multiplication, and the first book printed with engravings is the "Monte Sancto di Dio," Florence, 1477. The Landino Dante was illustrated with engravings by Baldini, from designs by Botticelli.

The history of wood-engraving was equally important, but the limitation of time prevented the lecturer from devoting the requisite attention to it. He mentioned the early use of stamps evident in the ornamental impressions upon Nineveh clay tablets, bowls, and inscribed bricks. In these cases, the patterns were indented by a prominent surface, and the reverse of the action of the well-known cylinders, on which the figures were hollowed out, or sunk, as in ordinary seals. The Greeks and Romans employed cut stamps for the repetition of their patterns on walls and ceilings, and this seems to have been actual surface printing, and not stencilling. Wood printing in the fifteenth century is so intimately connected with the formation of letters, that it seems impossible to determine which were first carved in wood, figures or letters. The earliest block books, in which the type is fixed, and the whole page carved, belong to a date about 1472. These blocks were all printed in a pale brown ink; but the famous St. Christopher, the earliest wood-block with a date on it, is printed in pure black ink. It is in the collection of Lord Spencer, and inscribed 1423. Another engraving has been discovered at Malines recently, bearing the earlier date 1418, but many doubts are entertained of its genuineness.

CHURCH BUILDING NEWS.

Ipswich.—A stained glass memorial window has been put up in the church of St. Margaret, in this town, by Mrs. Tranter. The work has been executed by Mr. Cuthbert, of Ipswich.

Cradley. — The foundation-stone of a new church, or chapel of ease to the parochial church of Cradley, was laid on Thursday in last week by the Hon. F. Lygon. The funds for the erection and endowment of the church, and a parsonage-house adjoining, were left by the late dean of St. Asaph. The church will cost about 1,800*l.* Mr. F. Preedy, of Worcester, is the architect, and Mr. G. M'Canu, of Malvern, the builder. The site is eight miles from Worcester, by the side of the old Hereford-road. The edifice will consist of a nave, chancel, tower, and spire, with a painted glass east window, designed and executed by Mr. Preedy. The style is Geometrical Decorated; and the material will be Cradley stone range-work and Cradley stone external quoining, with Bath stone internal quoining. There will be sittings (open benches) for 185 persons. The length inside the wal's will be 92 feet; breadth, 22 feet; width of chancel, 16 feet; height of tower and spire (which are at west end), 107 feet. The church will be warmed with hot air.

Torquay.—The Episcopal Chapel of the extramural cemetery has just been completed in the cemetery grounds, about a mile and a half from Torquay. The internal dimensions of the chapel (a simple parallelogram in plan), are 34 feet 6 in. long, 16 feet 6 in. wide, 16 feet high from floor to top of cornice, and 27 feet 6 in. to internal ridge-rib. It is in the Decorated style, and wholly built with wrought light grey limestone, except the door and window frames, labels, eaves, cornice, and roof corbels inside; all which are of Bath stone, and the gable and spire finials, which are of Portland stone. The roof is slated. The walls are internally coated with blue lias cement stucco, in which material the cornices and edge-mouldings of the window-splays are also executed. The roof-ribs are supported, internally, by curved pieces springing from stone corbels about 12 feet 3 in. above the floor, and divide the length of the chapel into several bays, all of equal width, except the two end ones, which are somewhat narrower. The bell-turret projects on the south side, and a tool-house on the north side. The only entrance to the chapel is by the western door. The architect is Mr. Gribble.

Newport (Wales).—A new district church, parsonage, school-masters' house, and schools, are to be erected at Sambrook, near Newport. The church will contain 204 free sittings for the poor. Messrs. Nevett, of Ironbridge, have promised to complete all the buildings in fifteen months, weather permitting. The building committee having advertised for tenders, received the following on 25th June:—From Mr. Cobb, Newport, 3,400*l.*; Mr. Barrat, Drayton, 3,150*l.*; Mr Treasure, Newport, 2,629*l.*; Messrs. Nevett, Ironbridge, 2,438*l.* These tenders do not include land and stone given, or the carting

of all materials, scaffolding, &c. which twenty residents in the neighbourhood have undertaken to do free of cost.

Bordesley.—A stained-glass memorial window has recently been placed at the east end of the northern gallery of Holy Trinity Chapel, Bordesley, by Mr. H. R. Cooksey. It consists of two principal lights, in which are placed eight medallions representing events in the life of our Lord, amongst which the blessing of little children and the dispute with the doctors, with other subjects from His childhood, occupy an appropriate position. The intervening spaces are filled with ornamental foliage, as is also the tracery, with the exception of the centre light surmounting the whole, which contains the monogram of the Holy Trinity. The glass is from the *atelier* of M. A. Gerente, of Paris, who has also executed the stained glass recently placed in the nave and transept of Ely Cathedral.

Walsall.—For a new church in Lichfield-street, a site has been given by Lord Hatherton, and a committee has been appointed. The estimated cost of the erection is 3,000*l.* and the endowment 1,500*l.*; making a total of 4,500*l.* Lord Hatherton has contributed for the endowment 500*l.*; the Lichfield Diocesan Society and the Corden Fund, 500*l.*; and it is expected that the Church Building and other societies will contribute 1,000*l.*; making a total of 2,100*l.* leaving 2,400*l.* to be raised by voluntary contributions. Of this 400*l.* have been subscribed, and the committee have appealed to the inhabitants for the residue.

Liverpool.—On Thursday in last week the first suburban cemetery constructed in this town since the passing of Lord Palmerston's Intramural Interments Bill, was commenced by laying the foundation-stones of the two chapels intended for burial services in the cemetery at Toxteth-park. One chapel will be devoted to the Church of England, the other to churches of other denominations. The cemetery is being constructed by the Toxteth-park Burial Board. The site was obtained from the Earl of Sefton, at a cost of 500*l.* per acre, or of altogether 15,000*l.* The cemetery, which will be about 30 acres in extent, is situate on the south side of Smithdown-lane. The ground is sandy, and capable of being properly drained. One-half, or thereabouts, is to be set apart for the Church of England, and the other half for other religious denominations. The whole will be laid out in mounds and slopes, and planted with shrubs. At the entrance from Smithdown-lane there will be two lodges. The chapel for the use of the Church of England will stand on the high ground at the eastern portion of the site, and consist of a nave 40 feet by 20 feet, porch, and vestry. It is designed in the Geometric Decorated style, and will seat 120 persons, allowing space in the centre for burial purposes. An octagonal turret and small stone spire are placed at the corner. The height from the ground to the top of this spirelet will be 53 feet. The two end windows will be filled with tracery, of geometric character. The jamb shafts are to be of black marble; the caps and bases, as well as all the other dressed stonework, of Storeton stone. The walls will be of brick, faced with Huyton stone; and in order to exclude the damp a cavity of 2 inches will be formed in the centre of the brickwork. The floors will be of square red and blue Staffordshire tiles. The roof, together with the seats, reading-desk, &c. will be wrought and stained to imitate oak. The other chapel consists of a nave, 35 feet by 20 feet; and will seat ninety persons, with room for funereal purposes. It is similar in general character and style to that already described, but will have, instead of a turret, an ornamental bell cote, pierced with tracery on the principal gable. The lodges will be built of patent brick, with Storeton stone dressings in the domestic old English style, of same period as the chapel. The front fence-wall will be of similar brick and Storeton dressings, having piers at intervals, the spaces being filled with an iron palisading, of suitable design. The gates will also be of an original pattern. The whole of the works have been designed by Mr. T. D. Barry, of Liverpool, architect. The laying out of the grounds, drainage, &c. are under the direction of Mr. William Gay, of Bradford, Yorkshire.

Ugthorpe.—The foundation-stone of a new church at Ugthorpe, near Whitby, was laid on Thursday before last, on a site given by Mr. James Hindson, of Ugthorpe. The new church is of the Decorated Gothic style, of about the period 1315. The plan is cruciform, having a small bell-turret and spire at the west end. The windows of the transepts are divided by mullions and tracery, and on the north side of the building a porch projects at the western commencement of the nave, the vestry being formed by a small outshoot on the same side towards the eastern end. The chancel or choir is divided in the interior from the nave by a ribbed arch, which rests on either hand upon corbels of carved foliage, and a screen of oaken tracery after the ancient manner passes across from side to side, through which in the centre the communion-table is approached. In addition to chancel sedilia, a flooring of encaustic tiles and other enrichments are spoken of, as well as stained glass for the windows, as far as the funds will admit. The length of the edifice from east to west is 80 feet; width in transepts 39 feet; height to ridge of roof, 32½ feet; and altitude of spire, 57 feet. The points of transepts, east end, porch, &c. are finished with ornamental stone crosses. Messrs. Coe and Goodwin, are the architects; and Mr. W. Langdale, of Whitby, the contractor.

THE BUILDERS' SOCIETY.

THE annual summer dinner of the Builders' Society was eaten on Thursday, the 12th inst. at Greenwich. Mr. Lucas presided: Mr. Wales was at the other end; and Mr. Haward, Mr. Nixon, Mr. T. Piper, Mr. W. Piper, Mr. Nesham, Mr. Bird, Mr. Todd, Mr. Lawrence, and other members, were round the table. Mr. Edward Barry was amongst the guests.

The Chairman pleaded his "first appearance in that capacity" as an excuse for any shortcomings, but showed as he proceeded that no excuse was necessary. In the course of some of his observations he spoke with warmth of the good qualities of Sir S. M. Peto, once his employer, and now his best friend.

Mr. Nixon gave "Success to the Society," with a sensible exposition of the good effects which resulted from the cultivation of kindly feeling: Mr Piper made one of his pleasant speeches; and Mr. Haward showed how "Good cheers" ought to be given.

The day was distinguished by good feeling and good wine; whitebait and wisdom.

Mr. Alderman Cubitt was kept away by an impending calamity, which has since fallen heavily upon him.

PROVINCIAL NEWS.

Wolverhampton.—The borough surveyor, Mr. Henry, on Tuesday in last week, laid before the local Public Works' Committee plans, estimates, and sections of the main sewers he proposes to lay down, accompanied by a report. He proposes to collect the sewerage into three main outfalls, Compton-road, Gosbrook, and Monmore-green, to afford facilities for the manufacture of solid manure, should it appear desirable. The estimates for the main sewers, including two canal crossings, shafts, side entrances, and various contingencies, amounts to 21,310*l.* The borough engineer is at present engaged upon the detailed levels, so as to prepare the sections for the street sewerage, which, when completed, will enable the local board to obtain the approval of the general board, and raise the necessary funds for carrying the entire scheme into effect.——The contract of Messrs. G. and F. Higham, for the erection of a new façade to the Red Lion premises, and interior alterations, to form the new town-hall, has been accepted by the Public Works Committee. The contract, according to the local *Chronicle*, is under the estimate of the architect, Mr. R. Veall, of this town. The new front will be of stone. The alterations, which are to be finished in six months, will be commenced immediately.

Worcester.—At the last meeting of the Local Board of Guardians, it was resolved that Mr. Rowe, architect, should furnish plans and specifications for new school-rooms at the Union-house, with day-rooms for master and matron attached, and dormitories for the children and the schoolmaster and schoolmistress.

Cardiff.—The opening of the new East Docks here was to take place on 20th inst. with procession, boat-racing in the new dock, and a public dinner and ball, &c.

Manchester.—Rapid progress is being made with the new Free-trade Hall. The Peter-street façade will be 70 feet high from the basement, or 10 feet higher than that of the adjacent Theatre Royal. The style of architecture will be Italian, richly decorated; and it is expected that two years will be required for the completion of the edifice.

Oldham.—The chief stone of the Lyceum was laid on Monday before last, by the president of the institution, in presence of Lord Stanley, M.P. Mr. John Platt, the mayor, with others of the corporation of Oldham, and a large number of spectators. We have already described the general design of this new building, of which Mr. N. G. Pennington, of Manchester, is the architect, and Mr. G. Whittaker, of Oldham, the builder.

Blackburn.—On Saturday before last, the foundation-stone of a new mill, to be called the Ordnance Mill, was laid on land at Furthergate, purchased from the Board of Ordnance. The ceremony was performed by Mrs. Marlin, daughter of the proprietor. The intended mill and shed will cover an area of 7,000 yards. The contractors for the building are Messrs. Hacking, of Blackburn, for the stonework; and Mr. Hornby, of Clitheroe, for the woodwork. The mill, when finished, will find employment for upwards of 500 hands. It will most probably lead to the erection of other mills on the same land, which adjoins the Leeds and Liverpool Canal. Two new streets have been laid down upon the land.

Lambton Castle (Durham).—Lambton Castle has been undermined by coal workings, and a portion has settled, fracturing the walls considerably. A drift is being sunk for the purpose of enabling the workmen to get underneath, and underset the castle. It is at present closed to visitors.

Stirling.—There is now nearly completed a new building for the Edinburgh and Glasgow Bank in Stirling. The front elevation has semicircular-headed ornamented windows. The street floor is appropriated to the bank, and two floors above for the manager's residence. In the basement story there are fire-proof rooms and safes. The building is of a warm tinted freestone.

WALLS' COURT FARM, NEAR BRISTOL.

ACTING on the suggestion of others, we have engraved a view and plan of farm buildings, in the parish of Stoke Gifford, near Bristol, on the estate of his Grace the Duke of Beaufort, and occupied by Mr. Alderman Proctor, which have been recently completed under the direction of Mr. Godwin, the conductor of this journal. To make the matter complete, we shall in an ensuing number venture to give a view and plan of the residence, and of the house for the bailiff.

The farm is situated principally on the lias formation, and was, until the last three or four years, of a wet, barren soil. Draining has greatly increased its capabilities, and improved tillage has produced considerable alteration in its appearance. The drains were put in at distances, varying from 30 to 60 feet, at a depth of 4 feet: 1½-inch pipes were used with collars, 2-inch pipes without collars. For the main drains, 3 inch pipes were used. The result has been very satisfactory.*

Mr. Proctor cultivates about 520 acres of grass land, and 125 acres of arable. On the farm there are other buildings for bulls and calves, and near the arable land stables, pigsties, and implement sheds. The buildings now shown are conveniently placed for the grass land.

The stock usually consists of about 200 head of cattle, of the short horn or Durham breed,

* Some remarks on thorough drainage will be found in our Vol X p 209 At p. 305 of the same volume, there are some particulars of the mode of irrigation adopted by Mr. Mechi; and in the previous volume, p. 555, some observations on farm buildings generally.

viz. from forty to fifty dry cows, twenty to thirty rearing calves, and the remainder young and feeding stock. There is also a breeding flock of about 230 South Down ewes and their produce, making a total of from 600 to 700 sheep, and ten farm-horses.

Mr. Proctor has now occupied the farm sufficiently long to completely systematise his proceedings, but at present he endeavours to have half the arable land in wheat, and the remaining half Swedes and mangel wurzel, beans, clover, and vetches.

A few days ago the Mayor of Bristol and twenty of the fraternity of Freemasons dined at Walls' Court, for the purpose of inspecting the homestead. Some account of the farm, by an able pen, appeared, in consequence, in the last number of the Bristol *Times*, a part of which we thankfully adopt, for obvious reasons, in preference to making any observations ourselves.

"Walls' Court," says Mr. Leech, "is in the rear of Stoke Gifford, and is, with the surrounding estates, the property of his Grace the Duke of Beaufort. Mr. Proctor's farm comprises 600 acres, of which about 400 are under grass; and so poor had for many years been the reputation of the land, that by all previous tenants it was known by the hungry but expressive name of 'Starve-all-Farm.' Nothing deterred by this title Mr. Proctor took it as a sort of recreation from the severer duties of a large manufacturing business, or, we should rather say, manufacturing businesses, as he has houses for bone and other artificial manures, not only in Bristol, but in Birmingham, London, and, we believe, in Leicestershire, so that our agricultural friends may form some idea of the amount of leisure such a man has to bestow on experimental farming. But system is everything, and as they say Cockney shopkeepers, when emigrating, make the most successful agriculturists in Australia, so the method of the counting-house, when applied by a man of business to predial matters, renders the management of even 600 acres a thing of easy routine.

Another potent element of trade was, it is true, also applied to Walls' Court Farm, by our friend, the alderman. He took the holding, we believe, under an equitable term, that was to give him a fair return for his capital, and through the magic operation of the latter, the once ill-omened Starve-all-Farm gradually became a model one. By the effective draining and manuring, the hungry land took heart, and gave forth rich herbage, dotted with cattle, such as Sidney Cooper would delight to paint. 4,000*l.* or 6,000*l.* not only made the wilderness bloom and blossom like the rose, but a picturesque residence and the most complete set of farm offices now render Walls' Court Farm the interesting object of the neighbourhood. All this has taken place in a marvellously short time. About four years ago, the aldermanic tenant resided in a handsome villa in Cotham-park, when the thought of rural felicity and dairy farming first struck him."

"The common bullock-sheds were, in themselves, patterns of convenience and order. The largest is about 220 feet long, and is almost an ecclesiastical-looking structure, being lit at the end by a three-light Gothic window. It accommodates fifty cattle, holding altogether, with the two lesser sheds on either side, about one hundred. But the singular feature of this bucolic building has still to be noticed. Down the centre of it (hear it, all ye lag-behind sons of the soil in Somersetshire and Gloucestershire, and, like our worthy alderman, go a head if you can), runs a well-constructed railway, for the conveyance of fodder to the stalled beasts on either side—no mere patched-up tramway, but a substantial permanent way, a line made without an Act of Parliament, working without a solicitor, and managed without directors. Certainly, at morning and evening, you may hear and see the train of waggons thundering along through these handsome sheds, while its share of green fodder is punctually delivered at every shed or station throughout the entire distance. Special trains also, we believe, occasionally travel at other hours of the day.

"Next came the incident in the Alderman's Agricultural Department, which most struck us. After passing the comfortable and picturesque cottages which he had erected for his farm labourers, our attention was attracted by an exclamation from one of the visitors, and following him into a building, we were pleased and surprised to find ourselves in a neatly fitted-up schoolroom, airy, arranged with desks, forms, clock, &c. and the walls ornamented with maps, and those illustrations of natural history which the Society for the Diffusion of Knowledge have published and rendered popular. This was in fact a school, established and supported by the tenant alderman himself, for the children of his farm labourers, there being nothing of the kind within practicable distance of Walls' Court. The children and intelligent mistress rose as we entered, and we learned that sixteen scholars attended during the day, and ten in the evening—the latter being employed at other times on the land, and spontaneously devoting a portion of their afternoons to the opportunities of improvement thus afforded them. Hear ye this, ye great farmers of Wiltshire, with your two or three thousand acres! how many of you recognise your responsibilities to the children of your workmen in this manner? If every one felt his duty and fulfilled it at his own cost, as Alderman Proctor does, the ignorance of the rural classes of England would not be so crying as it is. It was by the merest accident we discovered this circumstance, and the worthy alderman appeared to think as little of the merit of the act as he is ignorant of our noticing it. However, we cannot abstain, even at the risk of appearing to invade privacy, from chronicling the fact for the sake of example. People talk a great deal now about the right man in the right place; and we think it may well be said Mr. Proctor, whether in town or country, is never in the wrong one. Nor can his business in Bristol, Birmingham, and elsewhere, superadded to the charge of his bullocks and milch cows at Walls' Court Farm engross his energies—for the stranger or citizen who passes Redcliff Church, and sees the North Porch growing from year to year in newness and beauty through the liberality of an anonymous hand, which from time to time furnishes the funds, will not perhaps be so astonished to learn that the same Alderman Proctor, manufacturer, grazier, and restorer, is, *at least*, the sole depository of the secret of *Nil Desperandum*."

So much for the local historian. With regard to the use of pits for cattle, to which, in theory, there would seem to be some objection,—Mr. Proctor states that his present experience is decidedly in their favour for rearing and feeding stock, but for milch cows he prefers the stalls, on account of keeping them clean. The manure from the pits is found of excellent quality, and is allowed to remain in the pits until carted to the land.

The drainage from the stalls runs into the tank, and there is a supply of water at a level sufficiently high to allow of its running near the tank and mixing with its contents, and then irrigating some meadows below the buildings, which plan Mr. Proctor contemplates adopting.

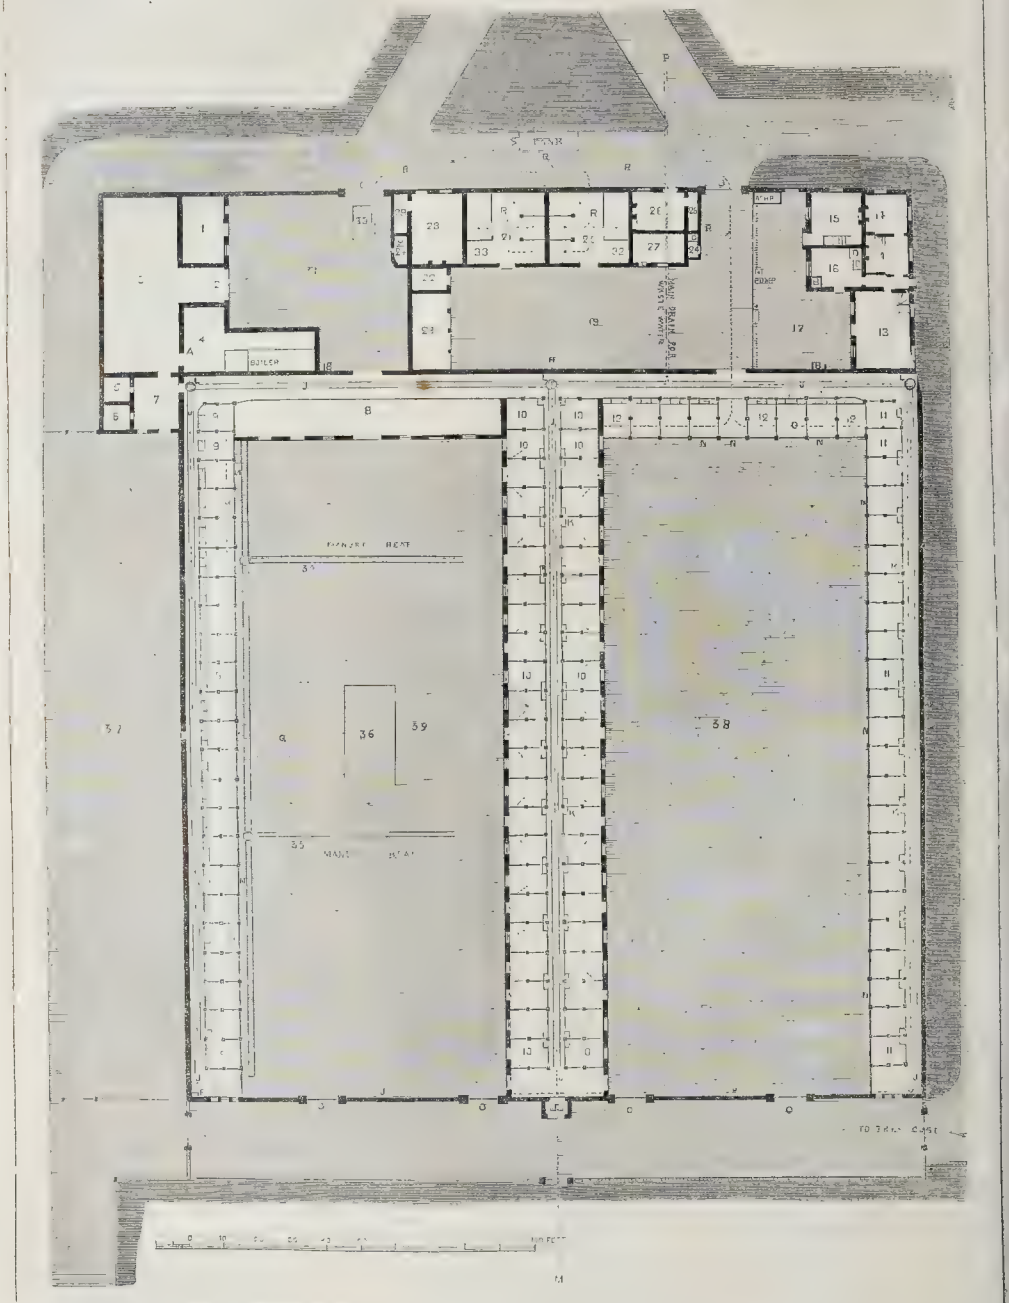
We were somewhat surprised to find that Mr. Proctor has been disappointed in the result of his experiments with liquid manure: he informs us that for two years he has carted the liquid manure on grass and arable land, but the result has not been satisfactory. It would be interesting to know whether other farmers who have gone to the expense of tanks and liquid-manure carts, and applied the manure on *heavy lands*, have been similarly disappointed, as these are expensive items in what are called agricultural improvements.

The steaming chambers are large, convenient, and inexpensive, and in seasons when hay is badly made appear to answer well. Mr. Proctor seems to consider that they are principally useful for steaming inferior hay, or hay and straw mixed, as the cattle are thereby induced to eat what they would otherwise reject and waste,—but his experience induces him to think cattle will do equally well on good hay without steaming as when it is steamed.

He has found from 4 lbs. to 6 lbs. of linseed cake, and from 4 lbs. to 6 lbs. of bean meal, with vetches or clover in spring, and hay and swedes in winter, the best food for fattening cattle; regularity and speed in feeding, and subsequent undisturbed repose, are essential.

The references which follow show the appropriation of the various parts of the building, the railway, the drains, and the water supply.

The buildings are constructed of stone, dug on the estate, with Bath stone dressings, and have slated roofs.



In the centre of the main yards, 38 and 39, straw-sheds of appropriate character will hereafter be erected. The stable-yard, 19, dairy, and barn, are on a much lower level than the cattle-sheds: the ground, before the buildings were commenced, having a steep incline. Inclined planes lead from the sheds into the stable-yard. We may add that the duke's agent, Mr. Thompson, of Badminton, has cordially co-operated with Mr. Proctor, and has taken a warm interest in the result.

The whole of the parish of Stoke Gifford belongs to his Grace the Duke of Beaufort, and we understand he has lately erected a new farm-house on the other side of the estate, and has shown a laudable interest in the improvement of the parish, by giving premiums to the cottagers for the cleanest dwellings and best cultivated gardens. We shall be glad to see farm labourers so raised in the scale of intelligence as not to need, or be willing to receive, rewards for simply acting like sensible beings; but so long as these are found useful means, we should be thankful to those who judiciously employ them.

The rain-water from roofs is caught for use of stable-yard, W. C.s, and for household purposes.

The doors to stables and enclosed cattle-sheds all hang from above, and slide.

The stall passages have a railway with turn-tables, L, at the junctions, for easily conveying food to the animals.

The drains to sheds, 9 and 12, are dotted (see Q Q) on plan: the drains of W. C.s, and stables, are dotted at R R. The whole empty into tank S.

WALCOT COURT FARM, NEAR BRISTOL, on the Estate of the Duke of Beaufort and Occupied by Mr. Thomas Proctor.—Mr. George Godwin, Architect.

SCRAPS FROM AN OLD SCRAP-BOOK.

IN the curious collection of manuscripts bequeathed by Mr. Cole to the British Museum, we find a page which condenses a number of facts, several of which relate to matters of specific interest. Without endorsing the data set down, we quote the column, and the authorities likewise where these are given. Mr. Cole has made the following observation as an introduction:—

"Mr. Tyson, of Benet College, having made the following observations in his reading, sent them to me at Milton, November. 1771."

"Anno 400. Bells invented by Paulinus, Bishop of Nola, in Campania, and thence named Campanæ.

Anno 550. Bells first known in France.

Anno 555. Raw silk first propagated, and wrought silk first made in Greece. Watermills invented, or rather their re-invention. —*Paneirollus.*

Anno 581. The Latin tongue ceases in Italy, and the Italian takes place.

Anno 590. Dress of the Lombards. They wore loose garments like the Anglo-Saxons, mostly of linen, having large seams, and interwoven with various colours. Their shoes were open, almost to the toes, and buttoned or laced together. They afterwards began to wear hose, over which, when they rode, they drew a sort of breeches; but this fashion they took from the Romans.

Anno 674. Abbot Benedict, says the venerable Bede, also brought over artificers skilled in making of glass, which till then had been unknown in Britain, wherewith he glazed the window of the church of Weremouth, and taught the English the art of glass making.

Anno 709. Wilfrid, a Northumbrian bishop, first uses silver plate.—*Tyrrell.*

Anno 728. The bans of Ina, king of Wessex, mention ale and alehouses.

Anno 758. Organs first brought from the Greek empire into the West about this time.

Anno 1070. Musical notes, as at present used, invented by Guido Aretinus.

Anno 1086. Domesday Book finished. The revenue of William I. (1160), 700*l.* yearly.

Anno 1090. London not paved.—*Howell.*

Anno 1097. The Holy War commences, from which heraldry took its rise.

Anno 1181. About this time glass windows are said to have been begun to be in use in England. They had been discovered long before though very scarce in private houses, and ranked even till now as a kind of luxury, and as marks of magnificence. Italy had them first, then France, from whence to England.

Anno 1200. The use of the mariner's compass supposed to be found out about this time. Some suppose it to have been of French invention, as it was first mentioned by Guyot of Provence, a French poet, who calls it maretina, and also because the north point is by all nations marked on their compasses by a *fleur-de-lis.*

Anno 1300. Looking-glasses made only at Venice.

Anno 1302. Most authors fix on this year for the invention of the mariner's compass by di Gioia, a Neapolitan.—See above, anno 1200.

Anno 1306. The daily expenses of the Bishop of St. Andrew's and his servants, being a prisoner in Winchester Castle, for siding with his own king, Robert Bruce:—

For the bishop's own daily expense	6d.
One man-servant to attend him	3
One boy to attend likewise.....	1½
A chaplain to say mass to him daily.....	1½
Total...	1s. 0d.

—*Rymer's Fœdera, vol.* 2, *fol.* 1016.

Anno 1330. Gunpowder and guns invented by one Swartz, a German monk of Cologne. The English in the famous battle of Cressy, 1346, had four or five pieces of cannon.—*Mezeray.*

Anno 1331. Edward III. grants letters of protection to John Kemp, of Flanders, to come and exercise his trade of a woollen cloth weaver. Soon after, in the same year, seventy families of Walloons came over. This was the first foundation of our woollen manufactures.

Anno 1344. Gold first coined in England.—*Sumptuary Laws of Edw. III. Vide Statutes.*

Anno 1367.—A grant of 10*l.* yearly settled on Geoffrey Chaucer, whom the king styles his servant (*Valletus noster*), for the good services which he has done, and is to do hereafter.—*Rymer, tom.* 6, *fol.* 567.

An inventory of goods sent to the Pope.—*Ib. tom.* 7, *fol.* 356.

Clock-makers brought first into England.—*Ib. tom.* 6, *fol.* 590.

Anno 1410. Henry IV. grants to the town of Cambridge a number of small taxes or tolls on provisions, &c. brought into their town either by land or water, to enable them to pave their streets, and mend the high roads leading thither. —*Rymer.*

Anno 1410. Guicciardini ascribes to the Netherlanders the invention of painting in oil, and staining glass with colours; also the making of tapestry;—who also named the points of the compass.

Anno 1418. Stone bullets used for cannon, the iron not yet being invented. See an order of Henry V. for 7,000 stones.—*Rymer, tom.* 9, *fol.* 542.

Anno 1422. Under this year, in Sir Robert Cotton's records, amongst the inventory of Henry V.'s jewels, Arras tapestry, apparel, and goods—'you shall,' says Sir Robert, 'find plain gowns of that king of less value than 40*s* and such other costly apparel as the worst pages of the least gentleman in these days would scorn to wear.'"

SUSSEX ARCHÆOLOGICAL SOCIETY.

THE Sussex Archæological Society, now numbering 667 members, held their annual meeting at Horsham on the 12th inst. The Hon. Robt. Curzon presided. The report having been read, the Rev. E. Turner, rector of Maresfield read a lengthened paper on "The Antiquities of Sedgewick Castle," which, he stated, was situated about two miles and a half from Horsham, eastward, in that detached part of the parish of Broadwater which lies between Horsham and Nuthurst.

Mr. W. H. Blaauw, Honorary Secretary, then read a curious paper, which he had translated from Greek and Latin letters, illustrative of Sussex men and manners in the last century, written in the year 1751 by the Rev. John Burton, fellow of Eton College, who, it appeared, in that year had paid a visit to Shermanbury in this county.

A short paper on the Scrase family was read by Mr. M. A. Lower.

The Rev. Thomas Medland read a paper on "The Ancient Churchwardens' Accounts of Steyning;" and Mr. Blaauw another paper on "Easebourne Priory and Durreford Abbey."

Mr. W. D. Cooper read a genealogical paper on "The Two Families of Braose and Hoo," whose monuments still remain in Horsham Church.

At the dinner, the President said;—

"Some fifty or sixty years ago we were wanting in a general knowledge of archæological subjects, more particularly of painting, architecture, and sculpture, and had fallen into the greatest state of barbarism on all these points. Any one who travelled into the remote districts of Harley-street and other parts of London, would see the great metropolitan style of architecture about fifty or eighty years ago. At the same time when these buildings were thought the peculiar beauties of the metropolis and the towns of England, the country churches were built in the Brummagem Gothic or Cockney Florid style; many peculiar instances of which might be seen in the neighbourhood of London and surrounding country. In consequence, however, of a greater knowledge in architecture, the Cockney Florid style was much rarer now than some years ago. A great many present must remember the days when there was no such thing as a National Gallery, and when there was no place where it was the pleasure of Her Majesty's subjects to go and study the pictures of the great masters of the old times. It was not more than thirty years ago since the National Gallery was first instituted, or what was called the National Gallery, held at a little house in Pall-mall, and to which they had to go down steps; and it was so dark that people had no great means of studying the art of painting. The British Museum did exist in a dark house in London, where people occasionally went in hackney coaches; but if one went there on a Monday, in all probability he would be told it was not open: if he went on the Tuesday, probably the keeper was not to be found: the same on Wednesday. Thursday was the day for cleaning, Friday the keeper was again out of town, and Saturday was a holiday. That was the most barbarous era that had existed in England since the days of William the Conqueror. He really believed that William the Conqueror would have known better than to have built Baker-street."

SIGNOR MONTI'S LECTURES.

IN his fifth lecture, Sig. Monti entered into a criticism on the application of the art of sculpture to the purposes of the new religion which was then being established, and showed the inevitable changes it would not fail to experience, when brought to express the new ideas and their noble aspirations.

The first symptoms of such changes were illustrated by the lecturer with diagrams of early Christian works from Rome, in which the Pagan materialism of forms is almost entirely subdued, and a tendency to mystic symbolism is obviously displayed.

More decided modifications in the Christian art at Byzantium were also illustrated by the lecturer, who showed that the subsequent dispersion of Greek artists, in consequence of the predominance of Iconoclastic doctrines, spread a knowledge and love of sculpture amongst the western nations, and affected also the efforts of Christian art in Central Italy.

The lecturer then traced out the influence which the prevailing element of the Germanic nations has exercised over Byzantine art itself,—exemplifying his assertions by diagrams from works of different countries, such as France, England, Germany, Italy, &c.

This influence tended to abrogate the decorative display and meaningless hieratic forms of the Byzantine school, and substituted for them the more sublime expression of the inward soul, under a simplicity of exterior that added to the importance of sculpture.

In the sixth lecture, according to the *Leader*, the lecturer resumed his analysis with the period of the Italian Cinquecento, where modern art ceased to be strictly Christian or religious, and embraced the wider field of history and poetry.

Having defended Michelangelo from the accusation of causing the ruin of his art by the intense vitality with which he impressed his creations, by showing in the works of his immediate Italian imitators a great deal of animation, but no excessive exaggeration—the lecturer traced the development of the French Renaissance, and examined the works of that period, both of France and of the Low Countries. Then, resuming the notice of Italian art with the excesses of Bernini, and alluding to the similar deformities of taste in France and in England, as exemplified by Puget and Roubillac, the lecturer introduced the modern reform brought about by the efforts of Pacetti, Canova, Thorwaldsen, and Flaxman, with whose names Sig. Monti associated those of the Roman critic Milizia, and the English painter Hamilton.

The historical sketch concluded with a notice of the more modern masters, as Rauch and the German School, the importance of which the lecturer took pains to impress upon his audience; and of Gibson and the English sculptors, of whose merits he spoke with the most warm and brotherly admiration, not unmerited; Pradier and the French Art, in which he lamented to find, with but few exceptions, so much *esprit* and skill debased to subordinate decoration, or lost in trivial materialism; and, finally, Bartolini and the new Italian or romantic school, of which, by-the-bye, Sig. Monti himself is an adept. In a brief summary of the course of lectures, Signor Monti said that the symbolic phase of art offered mere conventional representations, important only for the idea attached to them—that art reaches its climax only when it is the unfettered embodiment of national free expression—and that it sinks into emasculated and meretricious display when serving despotism and bigotry.

METROPOLITAN SEWERS' OFFICERS.—A deputation of officers of Metropolitan Commission of Sewers, consisting of Messrs. Lovick, Hatton, Cooper, and Dunhill, had an interview on Monday with Sir William Molesworth, at the Office of Public Works, on the subject of the Metropolis Local Management Bill.

COMPETITIONS.

Colchester Cemetery.—The Burial Board, according to the *Essex Standard*, are in a dilemma. They complain that the successful architect, Mr. Law, took away the selected design to prepare working drawings; that the lowest tender, — upon these working drawings (that of Messrs. Colls, of London) was found to be 1,905*l.* (nearly 300*l.* above the architect's estimate), and as this did not include all the works, additions were made, raising the total to 2,210*l.* at which sum the contract was executed, and some considerable progress has been made with the buildings. In the meantime, repeated applications have been made to the architect for the original plans, and various excuses assigned for the delay, but the committee being urgent, the plans were returned in the course of last week, when, on a comparison of them with the working drawings, the buildings were found to be 7 feet less in width, 5 feet in breadth, and 7 feet in height; the walls of the buildings, as well as those at the entrance-gates, considerably reduced in thickness; several windows missing. The newspaper, our authority, says that Mr. F Barnes has since been selected to carry out the design.

Manchester.—The design of Mr. Oliver, Jun. of Sunderland, has been selected in competition for the new Congregational Church, High Broughton, Manchester.

Lincoln Cemetery.—We have received an old account of the ulterior doings of the Burial Board here. Mr. Scott, who was requested to report on the plans, declined; but recommended Mr. Pearson, and the latter gentleman, our correspondent says, named as the six he thought best:—"1. Justitia. 2. Spes. 3. Studii Summa. 4. Industria. 5. Fides. 6.——I do not know the sixth; but certain it is that the set marked '*Hope*,' was not one of the six, and to show you the value set upon the architect's opinion, the board have actually awarded the first premium to '*Hope*,' the second to '*Studii Summa!*' The first prize for laying out the ground to Mr. Goddard (an indescribable motto), and the second to '*Hope!!*' So that you see the whole of the premiums are *confined to Lincoln*. There has been some nice 'dodging,' I can assure you; but it would take me too long to enter into particulars." The board afterwards determined to employ the author of the set marked "*Studii Summa*," Mr. Drury.

Greenwich Cemetery.—A competitor complains that although the selection of a design has been made, and tenders advertised for, he has applied three times for his drawings without effect.

Madeira.—The commissioners appointed to examine the plans sent in competition for the Hospital for Consumption to be erected at Funchal, Madeira, for the Duchess of Braganza, have selected the plan of Mr. E. B. Lamb, of London, for adoption, "for the convenience of the arrangement of the different apartments, and the characteristic architectural expression of the whole design." Several plans were sent from France and Germany.

SHEFFIELD.

New Temperance Hall.—The chief stone of the Sheffield Temperance Hall was laid on Monday before last by Mr. Alderman Harrison, of Wakefield, in the presence of a considerable number of the friends of the temperance cause. The site fronts into Townhead-street, and adjoins the Baptist Chapel. The design has been furnished by Mr. Kirby, and the works will be carried out under his superintendence. The building will have a plain dressed brick front with stone cornices, and will comprise two stories. On the ground-floor will be a room 25 feet by 50 feet, to be used as a school-room, or for temperance meetings. The second-floor will comprise a room 80 feet long by 51 feet wide, with a gallery at one end capable of seating 500 persons. At the opposite end will be two ante-rooms communicating with the large room by folding-doors, which by opening make these two rooms available as an orchestra or platform for speakers. The upper room will be the largest in the town, being 13 feet wider than the Music Hall, and capable, with the gallery, of accommodating 2,000 persons. The contracts have been let to Messrs. Cooling and Bowshaw, who have undertaken to complete the building for 1,148*l.* by October next. Including the purchase of land, internal fittings, heating-apparatus, &c. the building will cost about 2,000*l.* of which about 350*l.* have yet to be raised.

New Congregational Chapel.—The new chapel of the Congregationalists in the Wicker district was opened on Thursday in last week. It is in the Decorated Early English style,—a novelty in this vicinity as applied to Dissenting edifices. The plans were prepared by Messrs. Weightman, Hadfield, and Goldie, and the contract was let to Messrs. Ash and Clayton. The form of the edifice is that of a parallelogram, and it consists of nave, side-aisles, and galleries extending round the church. The building is 90 feet long and 60 feet wide. It affords sitting accommodation for 1,000 persons. The principal front is the south-east end. It contains a six-light window, with tracery. An arcade crosses the building beneath the window. The side view shows a triple range of windows;—first, the windows of the basement; then the gallery windows, over which is the gabled roof of the aisle; and above these the windows of the clerestory, surmounted by a high-pitched roof. The galleries rest on a Gothic arcade. The clerestory and roof are supported by metal columns, painted, with capitals decorated in the Byzantine style. From these columns spring a second series of Gothic arches. The roof is open to the spars. All the timbers are stained. The front of the gallery is of iron-work, relieved by gilding. The new mode of lighting public buildings by sun-lights has been applied. The heating will be by warm air. All the inner doors are protected by glass screens from exposure to cold draughts. The seats are low open benches. The cost of the building and its fittings, with other expenses, is 4,500*l.* of which, according to the local *Independent*, about 2,500*l.* have been subscribed.

Presbyterian Church.—The foundation-stone of the first Presbyterian Church in Sheffield was laid on Tuesday before last. The site is on the west side of Hanover-street, between Broomspring-lane and Wilkinson-street. The church will be in the Geometrical English style, with a lofty tower and spire at the end nearest Hanover-street, and the principal front will be formed of the tower and of the nave, which will contain a five-light window. The edifice will contain north and south aisles and a gallery at the eastern end. Externally, the building will have the usual form of a church with chancel at the western end, but in reality there will be no chancel: a school-room, with sessions-room over it, will be made to have outwardly the appearance of a chancel. The edifice will be of stone. It will cost about 3,000*l.* exclusive of the ground. Accommodation will be provided in it for 450 persons, and, when necessary, for more, by addition of side galleries. Messrs. Flockton and Son, architects, have furnished the designs, and will superintend the erection. The principal contractors are, Messrs. Powell for the masons' work, and Messrs. Moss and Robertson for the carpenters' work.

ARCHITECTS' CHARGES.

TAYLOR *v.* NEWINGTON.

THE circumstances giving rise to this case, as stated in evidence, are shortly these:—The southern portion of a lunatic asylum at Ticehurst, belonging to the late Dr. Newington, was destroyed by fire on the 21st April, 1852. The premises were insured in the Norwich Union for 7,000*l.* A claim was made upon the office for that amount. They refused to pay so much, but offered 5,000*l.* At first this sum was refused. The office then intimated they should claim a right to rebuild. At this stage Mr. G. R. Taylor, who was engaged on some works at the vicarage of Ticehurst, became employed to arrange the sum to be paid by the office. He met Mr. Howell, the surveyor to the office, and then made a report to the executors that he thought the sum of 5,000*l.* offered was ample, and that he could rebuild for that amount. Acting upon this advice, the executors accepted the 5,000*l.* For his trouble on this occasion Mr. Taylor charged the sum of 125*l.* being 2½ per cent. upon 5,000*l.*

The plaintiff then commenced plans for the restoration of the buildings, for which purpose he was furnished with some lithographic plans which the executors had in their possession. These he copied, and made some alterations, re-arranging some of the rooms. He also prepared a rough elevation. Before the plaintiff proceeded further, and before he had made any detailed calculations and specifications, or had, in fact, completed the plans, a difference arose between him and the executors, in consequence of which the plaintiff voluntarily withdrew, and sent in his account, charging the sum of 87*l.* 10s. for his rough plans, attendances at Ticehurst, and for attending twice on the Commissioners in Lunacy in London. He also charged 10*l.* 10s. for his travelling expenses, making in the whole 223*l.* The sum of 87*l.* 10s. was claimed on the principle of 1¼ per cent. on 7,000*l.* amount of his estimate,—being 5,000*l.* for a portion of the building, and 2,000*l.* for another portion. In consequence of Mr. Taylor's withdrawal, the executors consulted Mr. Charles Freeman, who made fresh plans and specifications for the restoration of the building, and received tenders for the work. The lowest tender was sent in by Messrs. Holland, and amounted to 8,015*l.* The executors considered that the amount claimed by Mr. Taylor was much too large; that a larger sum ought to have been obtained from the assurance office; and that as the plaintiff had discharged himself, leaving the matter incomplete, he was not entitled to a per-centage. An action was brought, and they paid 90*l.* into court. After the case had been opened it was referred to Mr. Phipson, of the Oxford circuit. Mr. Donaldson and Mr. C. Lee, on the part of the plaintiff, were of opinion that the commission was rightly charged. On the part of the defendants, Mr. Pownall, Mr. Freeman, Mr. T. H. Lewis, and Mr. Godwin considered that it was not a proper case in which to charge such a commission, and that the sum paid into court was a fair one,—giving the plaintiff 10 guineas a day for the time during which he was employed in the country, 5 guineas a day in town, from 25 to 30 guineas for the plans, and the amount of his travelling expenses.

The arbitrator has given his award in favour of the defendants, being of opinion that all that the plaintiff had done did not justify him in charging a per-centage, but only according to the value of his services; and that the sum paid into court, 90*l.*, was the value of them.

The counsel for the plaintiff was Mr. Field, of the Midland Circuit, instructed by Messrs. Chilton and Co. The counsel for the defendants was Mr. Henniker, of the Home Circuit, instructed by Messrs. Raw and Gurney, as agents for Messrs. Simpson and Dimond.

ADELPHI THEATRE.—ARTISTIC ENTHUSIASM.

VITRUVIUS tells us that Euterpe must not be forgotten in our court paid to her sister Muses, and a striking impersonation at the Adelphi Theatre strongly recalls to us the advice of the great commentator upon our art, and reminds us how few architects think more of music than as an amusement only. We are not going here to give a history of the art, or attempt to extricate its origin from the halo of uncertainty which envelopes it. The music of the past is a myth,—a mystery, a sweet dream of—we know not what, nor care, indeed, to examine too closely,—wherein gods, and poets, and inspired beings, and cherubs, were the performers, and shells and reeds, and lyres, and shepherds' pipes, the instruments; and when the waterfall and the sighing-breeze, and the rustling leaf, and the feathered songster of the grove, emitted no sounds but melodious ones.

For the music of the future we are told to seek the type in the mysterious strains of a Wagner or a Berlioz, or in the modern school of ultra-romanticism, where the ties of rythm and the rules of harmony, that fettered such *dull* fellows as Beethoven, Mozart, Weber, and the like, are scattered to the winds! But not having time to analyse the ingredients that form the school in question, we must content ourselves, and with thankful heart, too, with the music of the present; and, for the contemplation of a veritable enthusiast, whose love for his art and his instrument no earthly consideration can affect, no possible affliction diminish, we would refer our playgoing readers to a masterly creation by Mr. Webster, in the piece entitled, "Helping Hands," at the Adelphi Theatre.

This charming piece has been constructed by Mr. Tom Taylor, out of the poverty of a violinist, induced by loss of sight; his intense love for his Straduarius (the only article of value remaining to him), its sale for arrears of rent, his discovery of its locality by hearing it played upon, and his ultimate recovery of his treasure by the help of good friends.

And this reminds us of a *naïve* question put to us a few nights since, namely, why a violinist is always supposed to be more wrapped up in *his* instrument than other performers in theirs? The answer appears simply to be, that while pianos and harps wax old, and deteriorate in value, the violin enjoys a charmed existence, and improves in tone and value in an inverse ratio to its age. To this we must add its portability, and its wonderful power in delineating the passions, and the limited number of its oldest and best specimens,—

> "First seat him somewhere, and derive his race."
> *Dryden.*

Italy was the land whence the *perfected* violin emanated,—and the names of the three Amatis, of Straduarius, and Guarnerius, have conferred a lustre upon Cremona, which the lapse of two centuries and a half have but tended to strengthen.

NEW IRON ROADWAY FOR HIGH SPEEDS ON RAILWAYS.—Mr. Thomas Wright, C.E. has designed a bed-plate, sleeper, and iron roadway, for high speeds and heavy traffic, by which means 100 miles per hour may, it is said, be performed with ease and safety. The chief feature of this invention is the employment of a single sleeper as a complete piece of roadway in itself, consisting of a massive piece or casting, capable of sustaining a pair of rails.

NEW DISTRICT CHURCH OF THE HOLY TRINITY, UPPER TOOTING.

NEW DISTRICT CHURCH OF THE HOLY TRINITY, UPPER TOOTING.

LAST week we briefly alluded to the New Church of the Holy Trinity, at Upper Tooting, in the parish of Streatham, consecrated on the 26th ult. We now proceed to give more in detail an account of its architectural features, with an engraving. The building consists of nave, north and south aisles, chancel, chancel aisles, north and south porch, and vestry. A tower, 84 feet high, and 24 feet square, as indicated above, is proposed to be erected at the west end, when sufficient funds are obtained: the opinion of the committee, however, inclines in favour of a spire or steeple. The nave is 72 feet long, 44 feet high, and 25 feet wide, and the aisles 13 feet wide. The chancel is 35 feet long, 23 feet wide, and 32 feet high. The nave has an open timbered roof of deal, stained, with arched principals. The roof of chancel is open timbered, resting on short hammer-beams, with cusped principals, supported on stone corbels: those of the aisles are lean-to. The nave is divided from the aisles by an arcade, consisting of five bays, the columns of which are circular, surmounted with moulded capitals. The windows of the north aisle are two-light, cusped, and of different design: those in the south aisle are three-light. In the chancel there is a large window, at the east end, consisting of five lights, with circular foliated tracery in the head. The sittings are deal, stained. The pulpit is situated on the south side of the chancel arch: it is panelled on five sides, and is of oak. The reading-desk is also of oak, with open trefoil-headed panels, and small buttresses. The font is octagonal, of stone, with moulded base, and trefoils round the sides. Between the chancel and chancel aisles there is an arcade with two bays, with a shaft in the centre, with moulded capitals and bases. The church is paved throughout with red and black tiles; and the windows are glazed with cathedral glass in various patterns. The walls are of Kentish ragstone, with Bath stone dressings: the arches, columns, caps, bases, strings, &c. in the interior are also all of Bath stone.

We may, in conclusion, remark upon the circumstance of this being the third new district church consecrated within the space of twelve months in the parish of Streatham,—the two previous ones being those of Emanuel, at Lower Streatham; and St. Mary's, at Balham. This commendable zeal for increasing the church accommodation of the parish of Streatham has been materially aided by the rector (the Rev. J. R. Nicholl), who on the present occasion was assisted in the good work by the exertions of the committee, consisting of Mr. Butterworth, churchwarden, Mr. Castle, Mr. Henry Lee, Mr. Bousfield, Mr. Browse, Mr. Harper, and Mr. Stallingford. The family of the incumbent (the Rev. Edward Cree), headed the subscription with 1,000*l*. The building, as far as completed, has cost, with internal fittings, nearly 4,000*l*. The architect is Mr. A. Salvin; the contractor for the works, Mr. Jay. The seats are for upwards of 700, one-third being free.

HOW TO EXCLUDE THE HOUSE-FLY.—In rooms lighted from one side only, a net, or open network curtain, it is said, will keep out the house-fly, even if the meshes be more than an inch in diameter, or wide enough to allow several at once to enter on the wing.

Notices of Books.

The Crimea: its Ancient and Modern History; with Notices of its Scenery and Population. By the Rev. THOS. MILNER, M.A. London: Longman and Co. 1855.

THE Crimea is the great centre of attraction to which the eyes of the world are for the present turned, and the press accordingly is busily engaged in gratifying the public curiosity and interest in all that relates to it. The present volume, though not, it would appear, the narrative of one who has travelled in the Crimea, is an intelligent and interesting compilation, historical, archæological, and topographic. The author gives some little space to an account of the buildings, ancient and modern, scattered throughout the Peninsula, and to subjects of archæological and of general antiquarian interest. Various architectural remains of the ancient semi-civilization of this once "Cimmerian" land have been destroyed by the Russians since they took possession of it in modern times, but still there are some curious and interesting records, an account of which is here given.

The site of Cherson, the ancient Greek and Roman capital of this Chersonese territory, is a little to the south of Sebastopol. Here very considerable remains existed till the Russians destroyed them, at the end of last century. They included vestiges of the walls, gates, dwellings, and sepulchres of the inhabitants, with three Byzantine churches, half buried in the soil, and shafts and capitals of columns strewn upon the ground. The walls were double, and of thick masonry, filled interiorly with cement: two strong towers were entire in 1794. The Inkerman caves are curious remains. They were evidently subterranean monastic residences, and contain many traces of Byzantine character. The whole of the cliff to a height of 250 feet, is excavated with cells, chapels, sepulchres, winding galleries, and staircases. The summer palace of the Khans, who preceded the Czars, is said to have been "a fairy-like palace, with lofty windows of painted glass, commemorated in poetry, as having descended from Paradise." It stood on the banks of the Alma, in the vicinity of Bakchi-serai, the ancient Tartar capital of Crim Tartary, or the Crimea. "All that could be imagined of Oriental magnificence," says Halim Pasha, of one of its apartments—the Hall of Roses—"was here displayed: the walls were hung with purple velvet: carpets, of the finest manufacture, covered the floor; and richly embroidered silk cushions were the divans by which the room was surrounded." The fortunes of the Tartars were traditionally linked with the existence of the summer palace of their Khans; and the Russians fired and utterly destroyed it in the midst of the contest for possession of the land. So perished the hope of the descendants of Gengis Khan.

Some time thereafter, when Catherine of Russia visited the Crimea, a new scene opened on her doubtless gratified senses:—

"As the fleet sailed along, the spectacles prepared by the prolific genius of Potemkin were visible on either hand, though not in their true character. At greater or less distant intervals, pretty insulated dwellings were seen, so disposed with respect to the soil as to form picturesque points of view. Well-built villages appeared, the extent of which would lead the beholder to expect a numerous population, while their exterior aspect seemed to bespeak the comfort of the inhabitants. There were groups of men, women, and children, flocks of sheep and droves of cattle, shepherds and herdsmen. The houses were slender fronts hastily run up—the villages collections of them! Peasantry, flocks, and herds, had been brought from various parts of the empire, and were successively removed from one spot to another, often under cover of the night, so that a few thousands sufficed to produce the spectacle of a country teeming with people. 'The empress,' said the Prince de Ligne, 'who cannot run on foot as we do, was made to believe that towns for the building of which she had assigned the necessary money, are finished, while they are often towns without streets, streets without houses, and houses without roof, doors, and windows.' Several of these mock towns, at which the imperial traveller was expected to touch, presented wharfs laden with goods, apparently sacks of corn, storehouses crammed with merchandise, and shops full of manufactured articles. The raw produce of the empire had been hastily collected for the purpose of show: fabrics had been sent for from Vienna, Warsaw, and other places: but many of the ticketed bales and bags contained nothing but straw, shavings, or earth!"

There is still not a little of this Chinese deceptiveness in the policy of Russia. The Russians, however, have since done a good deal for some parts of the Crimea in the way of improvement, exclusive of Sebastopol, to which we need not here more particularly refer. The destruction of its archæological records, too, has at length been stayed, and at the ancient Tartar capital Bakchi-serai, Russians are not even allowed to reside, and all is preserved as far as possible in its primitive state, by way, we presume, of archæological and ethnographic curiosity. Near this singular old town is another of a still more curious kind, named Tchoufout Kaleh, or the Jews' Fort, perched on the summit of an isolated and perpendicular rock. This town is inhabited, during the night, by Jews, who are believed to be the pure descendants of a wandering tribe from Babylon who never returned to Jerusalem, unless in modern times and for religious purposes. By day these Jews employ themselves in Bakchi-serai, but there none of them sleep. The Jews' town is said to be silent as a sepulchre during the daytime. Adjoining the town is a dell, called from time immemorial, "The valley of Jehoshaphat," and which is the cemetery of Tchoufout Kaleh. There are here many sepulchres with curious ancient Hebrew inscriptions. Every Crimean Jew returns, if possible, to Tchoufout Kaleh, to die, and be buried in the valley of Jehoshaphat along with his forefathers.

Enough has recently been said in the daily papers as to Kertch and its museum, its tomb of Mithridates and its other archæological curiosities. As for the museum it seems that its most valuable treasures had been long since removed to St. Petersburgh, so that the recent destruction of what remained is the less to be regretted.

Along the southern coast, to seaward of the highland range which adjoins it, there is a series of showy villas belonging to the Russian nobility, of which our author gives some account, and particularly of Aloupka, "the Alhambra of the Crimea," said to belong to Prince Woronzow, but which, if we mistake not, he disowns. Of the imperial domain of Great Orianda, near Yalta, belonging to the dowager empress, it is said, that nearly twenty years since, Mr. Hunt, an English architect, received a commission to erect here a palace designed to be the most magnificent building in South Russia, but only a very small portion of it has been executed.

On the whole, the volume in hand will repay perusal at the present moment.

VARIORUM.

THERE is an interesting volume which has been before us some time, and to which we allude under this heading merely by way of preliminary notice, as we may return to it at greater length, —namely, "Historical Memorials of Canterbury," by Arthur P. Stanley, M.A. canon of Canterbury, published by Murray, Albemarle-street. The divisions of the volume are titled "The Landing of Augustine,"—"The Murder of Becket,"—"Edward the Black Prince,"—and "Becket's Shrine." By way of frontis-piece, the work is illustrated with an engraving of the transept of "the Martyrdom" in the cathedral, and, connected with the same subject, there is a plan of the cathedral at the time of the murder of A'Becket. The shrine of A'Becket and the tomb of the Black Prince, form the subjects of other illustrations. The basis of this book consists of certain lectures delivered at Canterbury, and a Quarterly Review article. In an appendix are copies of various original documents from the archives of the Chapter of Canterbury, contributed by Mr. Albert Way, who is a relative of the author. ——Not entirely unconnected in general nature with the preceding subject is the next book to be here noticed, namely, a new and cheap edition of Hallam's "View of the State of Europe during the Middle Ages," also published by Mr. Murray. In this (eleventh) edition of Hallam's standard work, the volume published in 1848, under the title of "Supplemental Notes" to the text of the work itself, has been incorporated, so that the "Hallam" of the present day is not just what it used to be, but a work more complete in detail, and, as it were, once more revised and corrected by the author himself. Every student should know this work.——A very superior book of its kind, is an Almanac, has been forwarded to us from Australia. It is titled "The Victoria Commercial and Nautical Almanac for 1855;" James J. Blundell and Co. Melbourne, the publishers. The price is six shillings, but the contents are very varied, and full of useful information. From this Almanac, we find that in Melbourne there are now the following institutions;—The University, the Philosophical Society of Victoria, the Victorian Institute (would not Victorial have been better, as derived from Victoria not from Victor?) the Mechanics' Institute, the Philharmonic Society, Benevolent Asylum, Lunatic Asylum, Immigrants' Aid Society, and Wesleyan Immigrants' Home. Various Government officers, amongst others, have liberally contributed to the getting up of this capital Almanac. Mr. Blaudowski, curator of the public Museum, has contributed a valuable article on the physical geography of the colony of Victoria, from which it appears that sandstone of exceedingly good quality is found in more than one district, as at Geelong. There seems to be plenty of slay slate too, and of granite in all its varieties. Lime stone is got along the whole coast, and is in regular use for conversion into lime.—— The new number of the *Edinburgh Review* (a capital one), has a sensible and instructive essay on Fortification, showing how completely Silistria and the Crimea have established the value of earth-works over stone walls:—"The result of all this experience on our engineers has been, that after the siege of Silistria was raised, and Bomarsund had fallen, they came to Parliament for increased estimates to erect masonry towers, *à la Bomarsund*, along our coasts, choosing especially places where the water was deepest close in shore, and where they were most completely commanded from the high lands behind; and, as is usually the case, the House of Commons passed these estimates without asking a single question."—— In the *Quarterly Review* we have an elaborate article, showing the just claims of *Colchester* to the interest of the archæologist:—"Where else in Britain can we find more abundant traces of Roman life and manners? Which of our towns besides presents such a monument of Roman fortification?" There is, too, a useful article on the Supply of Paper, urging attention to the pressing want of a new material for it. The present consumption is enormous, and it must be greater. The sheets of paper required by the *Times*, for eight days' supply, laid open and piled upon each other, would exactly equal the height of St. Paul's Cathedral.——Part I. of the fourth volume of "Transactions of the Architectural Institute of Scotland," just now published, contains several very excellent papers on "The Chemistry of Building Materials," by Dr. George Wilson.——A third edition of "The Royal Hotel Guide and Advertising Handbook" has just been issued from the office, 441, Strand. In this very useful guide the tourist throughout the United Kingdom, and even abroad, may at once be able to ascertain the charges made at various hotels for such accommodations as bed-chambers, private rooms, &c. or for breakfasts and dinners, or other items of expenditure. One excellent result of the publication of such a guide will be the equalization of charges, heretofore so absurdly and so unaccountably various. —— Not much unconnected with Hotels is the interesting subject of Cookery, although what we have to say of it bears more particular reference to home cookery, and making the most of good ordinary victuals fit for the poorer classes. Mrs. Acton has published (Messrs. Longman and Co.) a newly-revised and much enlarged edition of her already excellent and standard work on "Modern Cookery for Private Families." This book is especially intended for the tyro in cookery, and although Monsieur Soyer may be said to have swallowed up an immense amount of public patronage even on this more elementary branch of the science of gastronomy, we have no doubt that Mrs. Acton will still find a wide field open to her, and much success we wish her in her commendable effort to make the poor man's wife a better cook, and his home more comfortable and attractive.

Miscellanea.

MACHINE FOR MAKING BUTT HINGES.—Mr. Charles Miller, of New York, in patenting a machine for manufacturing hinges, claims a series of punches, which cut out two blanks of proper shape, with a pair of bending rollers, for giving the proper bend to form the joint, by which two pieces of metal, fed at proper intervals, are cut, bent, and put in position ready to receive the pin; so controlling the action of the punches, rollers, and cutters, that they act nearly simultaneously during each intermission of the feed movement, the rollers following the punches, and the cutters succeeding to the rollers;—the arrangement of wire feeder and cutting apparatus, and the press which carries the closing die, that the rotating wheel may hold the hinges—first to receive the wire for the pin, and afterwards to have it closed or rivetted;—an eccentric curved piece for finishing the insertion of the pin in the wheel, and the general combination of the several mechanical arrangements, forming a machine for the manufacture of hinges from bars or strips of metal, complete at one operation.—*Mining Journal.*

MANUFACTURE OF IRON.—Mr. Joseph Hipkiss, of Dudley, has patented the making and repairing of the beds of puddling furnaces with the cinder produced in the manufacture, whether used alone, or fused, or mixed, with pottery or other iron ore.

THE SCOTCH NATIONAL GALLERIES.—We understand that Government has agreed to give a further sum of 10,000*l.* towards the completion of the art galleries on the Mound, upon the understanding that the board of trustees shall also give an additional sum to finish the building and approaches. The amount already expended is 40,000*l.* of which 25,000*l.* were received from Government.

STATE OF THE THAMES, AND MEANS OF RELIEF.—In the present discussion, several important facts are quite overlooked. By reference to "Hansard," of July 27 last,* it is evident that a large sum of money was granted for the purpose of commencing the construction of two intercepting drains, and the Metropolitan Commission hold this sum (300,000*l.*) subject to a decision as to the best plan, they having invited the submission of plans, and having received about thirty. A general committee of the Metropolitan and City Commission selected ten of these, on the 18th of April, and then they resolved, "that it be recommended to the court to order that the reports and communications of the gentlemen undermentioned, having reference to the drainage of the metropolis, or part thereof, be referred to a committee of engineers for their consideration and report." Since the month of April no farther step has been taken by the Commission, although powers might have been secured for purchasing land for the outfalls during the week required for obtaining the consideration and report of a committee of engineers.—EDILIS.

* Daily News, Chronicle and Advertiser, July 25, 1854.

LAUNCH OF "THE LARGEST STEAMER IN THE WORLD."—There seems to be an ambition amongst naval architects and builders to render every large steamer laid on the stocks still larger than all previously launched, and now the *Himalaya* and the *Great Britain* are ships of but secondary calibre. In rapidity of sailing, too, wonderful advances are being made: the new royal yacht flies along at the rate of 17½ miles an hour, and even still more recently we hear of another new steamer which is said to have realized no less than 20 miles an hour,—the usual rate of pretty good railway speed. A very large steamer, the *Persia*, has just been launched for the Cunard American line, by Messrs. Napier, at Glasgow. She is an iron paddle-wheel liner, and is said to be the largest steamer, both in capacity of hull and steam power, as yet built. The contrast between this magnificent ship and Henry Bell's *Comet*, of 40 tons and 4 or 5 horse power—the first vessel propelled by steam in British waters—is so vast as almost to exceed belief; yet there were persons at the launch who had also witnessed the starting of the tiny *Comet* in 1812. The *Persia's* chief proportions are,—length from figurehead to taffrail, 390 feet; length in the water, 360 feet; breadth of the hull, 45 feet; breadth over all, 71 feet; depth, 32 feet; burthen, 3,600 tons. According to government rule of admeasurement, her power is equal to that of 900 horses; according to James Watt's old-established rule of 33,000 ft. lbs. to the horse, she is expected to work up to the pith of between 4,000 and 5,000 horses. The *Persia* has seven water-tight compartments and a double bottom, so that in the event of accident to the hull these compartments or tanks would of themselves float the ship. She will have eight large tubular boilers and two funnels. There is separate sleeping accommodation for nearly 300 passengers. The weight of iron in the ship as launched was 2,200 tons: with engines and full load the weight will be 5,400 tons, at which time she will draw 23 feet of water.

MACHINE FOR TESTING TIMBER, IN THE PARIS EXHIBITION.—In a communication from Messrs. Varral, Middleton, and Elwell, engineers, Paris, dated the 22nd ult. there is a description of a series of experiments tried before Lord Cowley and some gentlemen of the British Embassy, Captain Fowke, R.E. and other royal commissioners, with a machine invented by Mr. Dunn, of the Windsor-bridge Iron-works, Salford. The first experiment was on a piece of French-grown pine, 12 inches square and 4 feet between the supports, which deflected ½ inches, and broke with a strain of 42½ tons. Next the tension was tested on a bar of charcoal iron, 20 feet long and 1 inch diameter: it broke with a strain of 26 tons, after stretching 17 inches. The third experiment was made upon a chain-cable, made by Mr. Tinsley, of Dudley, Staffordshire, of the ordinary iron, three-eighths of an inch in diameter, stud link, and 20 feet long. It stretched 9½ inches, and broke with a strain of 56 tons. The fourth experiment was upon a piece of French-grown oak, 12 inches square and 4 feet between the supports. It deflected 5½ inches, and broke with a strain of 54 tons. Our correspondent adds that "one end of this log was shaky, and gave way before we considered the full test was on." They state that a quantity of colonial timber is being prepared by the royal commission for further tests, as well as other large cables and bars of iron.

THE CITY.—What do the authorities intend to do with the ruins in Skinner-street, Snow-hill? Valuable as land is in the City and its immediate neighbourhood, surely some improvement here would pay, while it added to the comforts and welfare of the inhabitants. Some years ago we were told that a sum of money was provided by the corporation to build lodging-houses, baths, &c.; yet there is neither a lodging-house nor public bath in the City; nor do we hear of the public library which Mr. Challis was so anxious to provide when he was Mayor. In the northern suburbs we have no baths, and but few other institutions that conduce to improvement; and considering the wealth the town represents, and that most persons of property and influence are connected with it, it does not present that picture of Christian love and charity which we, as professors, are in duty bound to show.—G. H.

DISTRICT SURVEYORS' FEES.—The District Surveyor of Bow and Poplar summoned Mr. Augustus Taylor, of Colt-street, Old Ford, and Mr. Miles, of the same place, to Worship-street Police Court, for refusing to pay the fees upon various houses built by them in Albert-road and Victoria-street. Proof was given that the receipt had been tendered in each case. The defendants, who had up to that time refused to pay, asked for time, and the district surveyor consented to allow a fortnight. The magistrate, Mr. Hammill, said that if the fees were not settled by that time his warrant would be issued for the amount claimed and expenses, to be levied on their goods. He wished builders would understand that district surveyors had this power of recovery.

DRAINAGE AND THE THAMES.—Cleanse the river from its present polluted state. Provide a direct east and west communication for the metropolis. These are both crying wants, that will sooner or later be remedied; but in the meantime, both projects are in a nebulous state, and if you will grant me audience in your pages, I will try to clear away a little fog by putting two or three things together that have always hitherto been considered apart. I do not claim any novelty of ideas in this matter, but I only wish to give the matter a practical turn, and what has hitherto been looked at as impossible, on the score of expense, may now, perhaps, be thought not so difficult of execution on that head. The Government, *or* the Commission of Sewers, is committed to a plan of intercepting sewers, the estimate for which is three-quarters of a million or more. This plan, if I understand it aright, is a series of large tunnels, intersecting the present sewers at various points, and their construction will cause a vast disturbance of the causeways, and lead, perhaps, as in the case of the Victoria sewer, to immense expense beyond the estimate. Now I propose a tunnel sewer in the bed of the Thames, at 100 yards from the shore, the crown of the sewer to be level with low-water mark. This will admit the present sewers to discharge into it, instead of into the river, and so satisfy point one, and clear the river of all pollution. By means of inlets from the river, it may be flushed at any time, without cost. Above the crown of the arch, and 6 feet above high-water mark, I would construct a causeway, 120 feet wide, divided into three spaces, the two side spaces of 40 feet each to be roads, with footways on each side; the centre space, of 40 feet, to be built up in strong arches: on the summit of this I would run four lines of railway, two for expresses, and two for slow traffic: under the railway, in the arches, there is room for shops facing the road. The levels of the road would enable any side streets, such as from the Strand, Blackfriars, &c. &c. to join in readily; and the railway, being on arches, could run off at any point to any district of London. On the score of expense, as far as the main sewer goes, it would undoubtedly cost less than the intercepting sewers. Again that is a matter that will in any case fall into the sewer rate, and so we may assume that it will not need to enter into the calculation as regards the roadways. The rental from the shops and the traffic of the railroad will, without doubt, cover all expenses, and leave a handsome profit. Government need not advance one penny: only let them guarantee 4 per cent. interest in the event of failure, and I will venture to say they will never be called upon for a penny, and get the money for its execution subscribed in a week.—J. C. N.

MINERAL DISCOVERY AT SWANSEA.—A valuable vein of lead ore, it appears, has been found in the immediate neighbourhood of Swansea, and preparations are being made for working it. The principal lode is said to be 12 feet wide, and the ore a rich silver bearing one.

THE WORCESTER MODEL DWELLINGS ASSOCIATION.—The annual meeting of this society was held on Thursday in last week, when the hon. secretary read the report of the past year's proceedings; from which it appeared there was a balance in hand of 885*l.* 10s. 7d. after paying preliminary and law expenses, and purchasing the site between Warmstry-slip and Cooken-street; that 246 shares had been taken, representing 6,150*l.*; and that all the calls had not yet been made on these shares. The sum received on calls, a few subscriptions, &c. was 2,763*l.* 10s. 10d. The report was adopted.

BATH SCHOOL OF ART.—The second quarterly meeting of the general committee of this school was recently held at the Commercial and Literary Institution, Bath. The report read by the hon. secretary states that there are six classes at the central school, with 230 students; and that there are five other schools under instruction, with 439 students. Since the commencement there have been received 317*l.* 12s. 11d. of which 297*l.* 8s. 4d. have been expended, leaving 20*l.* 4s. 7d. to meet outstanding demands, amounting to 130*l.* Only 56*l.* 2s. have been obtained from the public, notwithstanding frequent appeals, and the publication of a previous report. It is singular that in Bath, where so much is said of art, and where there exists a society, for the "Promotion of Fine Arts," the sum of 150*l.* cannot be raised for the sake of working a useful talent, and fostering a taste for what is pure and pleasing.

PARSONAGE-HOUSES.—It may be useful to mention a new principle lately admitted by the Church Commissioners, in a case where, from the absence of endowment, the Queen Anne's bounty is unable to make a loan. The incumbent is permitted to purchase the site, to build the house, and to make over both to the Church Commissioners, charging the living with the repayment of a portion of the capital advanced, secured in the form of an annual rent-charge to himself or his heirs, in case of his voidance of the incumbency within thirty years.

CONSECRATION.—A correspondent says, "The earliest commencement of particular actions is at times of such a lineament, as to be thought great; but the minute completion of the same may also be esteemed as great, if not in ultimate results even greater;" and then urges the necessity of inscribing the day of consecration (and date), and name of the prelate by whom the church is consecrated, in golden letters, upon a visible panel of the said church or churches.

FALL OF AN INHABITED HOUSE AT BRIGHTON.—Two very old houses were being pulled down in North-street to make way for new, when a third, which was shortly to have been also pulled down, slipped down into a mass ruins, burying under them two young women and a dog, all of whom escaped with life and limb. A bruise near the eye, which one of the ladies unfortunately got, was the only casualty. A customer was in the shop at the moment, and had just time to spring out into the street as the ceiling came down. The house adjoining stands on the site of the old theatre of Brighton.

MR. DARGAN, the Irish railway contractor, was defendant in a recent case brought to a close in the Court of Queen's Bench, Dublin, after a trial of three days. It was an action brought by Dr. Atkinson, of Drogheda, to recover 6,000*l.* for alleged breach of an agreement, by which he and Mr. Dargan were to have shared between them certain profits in the execution of railway works for the Dundalk and Enniskillen Company. Mr. Dargan's defence was that he never undertook to superintend the management of the contract or the measurement of the works. Both plaintiff and defendant were examined on oath, and their evidence was point blank contradictory as to the fact whether the seals were fixed to the agreement at the time it was signed. The case terminated in a verdict for the defendant on all the issues.

ANTIQUARIAN DISCOVERIES AT HIGH ROCHESTER.—The Newcastle-upon-Tyne Society of Antiquaries, with the aid of the Duke of Northumberland, have discovered at, the Roman Camp, Bremenium, the remains of a thick wall, with a chamber-like a prison, and various inscriptions, one of which relates to the erection of a ballistarium, by Claudius Paulinus, a Roman pro-prætor.

SHARP PRACTICE.—Some time ago my excellent client, the Vicar of Llan——, consulted me on the subject of a Cemetery Chapel he was about to build, but as the undertaking was not of a pressing nature, and as I was ill at the time, the execution of it remained in abeyance. Within the last fortnight I had an opportunity of calling on the worthy vicar, and the first object which caught my eye on entering his drawing-room, was an elaborately got-up design for a Cemetery Ch pel, bearing the signature of an individual whom I shall call Mr. Wily Wesleyan. I was naturally surprised, and on seeking an explanation, I was told that Mr. Wily Wesleyan (with the full knowledge that I had been previously employed), pressed the vicar to transfer the commission to his (Mr. Wily Wesleyan's) hands—that Mr. Wily Wesleyan appealed to the vicar in a manner offensive to good taste, and finding his (Mr. W. W.'s) solicitations unavailing, he capped his unwarrantable procedure by stating his determination to send to the vicar a design gratuitously. This was the drawing I saw, and it was accompanied (so the vicar informed me), by some framed and glazed lithographs of buildings erected under the superintendence of Mr. Wily Wesleyan. I trust the success which has attended Mr. Wily Wesleyan's career in the congregational conventicle connection, in which his efforts are perhaps appreciated, has not been obtained by a course of practice similar to the specimen I have ventured to expose.—A COUNTRY ARCHITECT.

FALL OF A CORNICE.—At Manchester, on Tuesday week, a portion of a heavy cornice fell from the upper story of the Stamp-office-buildings, Cross-street, to the pavement below, a height of at least 40 feet. A man passing was knocked down, but his injuries were slight.

MILITARY ENCAMPMENTS.—The contract for forming the new encampment at Colchester has been taken from Government by Messrs. Lucas, Brothers, who have just completed the encampment for the Foreign Legion at Shorncliffe, and are also engaged by Government upon extensive works of a similar kind at Woolwich and Aldershot.——A large range of wooden huts, capable of accommodating 1,000 men (militia), is immediately to be erected on Hobb's Point, in the vicinity of Pembroke Dockyard, Wales. The contract has been taken by the Board of Ordnance, and six weeks are allowed for their erection.

CITY OF LONDON PEEL STATUE.—The statue of Peel, executed by Mr. Behnes, for the City, and cast by Robinson and Cottam, has been set up at the west end of Cheapside, where it joins Aldersgate-street. The pedestal, of granite, is simple to a fault. Of the statue itself we cannot now speak, as it was wrapped in a cloth when we visited it.

FALLING OF A RAILWAY TUNNEL.—The Outhwaite Tunnel, which is situated about midway between the Penistone and Wortley stations, on the Manchester, Sheffield, and Lincolnshire Railway, fell on Saturday morning, the 14th. The tunnel is 300 yards long, and the portion fallen is not more than 10 yards. The stratum for a great thickness above the roof of the tunnel is soft shale.

RAILWAY COMMUNICATION BETWEEN ENGLAND AND FRANCE.—The project of a tunnelled railway beneath the Channel has been revived. It is now proposed to case the walls of the tunnel with iron instead of masonry, so as entirely to exclude water and to allow of the tunnel being made on a level from shore to shore, in place of falling towards each end to drain off the water by help of steam power.

THE RECENT THUNDER-STORM.—During the severe storm of lightning and rain which passed over the metropolis on Saturday morning last, one of the pinnacles of the Church of the Holy Trinity, Brompton, was struck and hurled to the ground. A house at Estridge-place, St. John's-wood, was also struck. Oxford was visited by the same storm, accompanied by lightning of a terrific character. The parish church of St. Ebbes was somewhat injured. Soon after five o'clock the lightning struck the weathercock, and in its progress knocked a small portion of the top of the tower off, passed through the roof of the church, and completely melted part of the spouting. The interior also felt the effect of the shock, for, after passing through the wall, it struck the pulpit, and completely took the door off its hinges. At Bristol the storm exceeded in violence anything of the kind that has occurred in that city for the last thirty years. The thunder was very violent, and the lightning so vivid that the captains of the African and Indian ships in that port describe it as being the nearest approach to a tropical tornado that they ever witnessed in this country. This looks very much like a compensation for the singular want of thunder storms last year; and if such storms do "clear the air;" and if the want of them do breed pestilence, we have now reason to be thankful, even spite of our nasty Thames.

TENDERS

For a pair of Villas on the St. Margaret's Estate, Twickenham, for Mr. J. Sprye. Mr. G. Morgan, architect. Quantities supplied by Mr. Yeldham:—

Chapman and Parsons	£1,239 15 0
Richards	1,188 0 0
Tombs	1,060 0 0
Todd	1,057 0 0
Donelly	1,040 3 3
Howlsson and Co.	1,033 0 0
Adamson and Sons (accepted)	994 0 0

For alterations and additions to Goring Hall, near Worthing, Sussex. Mr. Edward M. Barry, architect. Quantities supplied by Mr. J. H. Strudwick:—

Lucas	£2,775 0 0
Cubitt	2,647 0 0
Blaker, Worthing	2,454 0 0

For the Wesleyan Provident Assurance Society's Offices, Moor-street, Birmingham. Mr. Samuel J. Smith, architect. Quantities supplied:—

Haywood	£2,250 0 0
Pashby	2,220 0 0
Mountford	2,218 0 0
Briggs	2,190 0 0
Barnsley	2,050 0 0

For alterations and additions to the Brompton County Court. Mr. C. Reeves, architect. Quantities supplied:—

Haward and Nixon	£2,777 0 0
George Mansfield and Son	2,735 0 0
H. and R. Holland	2,694 0 0
Ashby and Horner	2,440 0 0

For new Music Hall, and additions to Hotel for Mr. Green, Covent Garden. Mr. W. F. Hill, architect.:—

Gammon	£4,999 0 0
Mackenzie	4,987 0 0
Carter and Ellis	4,225 0 0
Mansfield	4,894 0 0
Ashby and Horner	4,890 0 0
Elston	4,730 0 0

TO CORRESPONDENTS.

Antiphlogistic Wood.—A correspondent, "W. L L. R." wishes to know "what are the other ingredients besides alum which Mr. Braidwood speaks of as being a good preparation to make timber to a certain degree antiphlogistic." We do not remember the composition in question. Alum itself, we may remark, has been recommended as an antiphlogistic, by means of which theatre curtains, drapery, &c, might be deprived of their liability to take fire. The corrosive sublimate process by which timber is saved from rot, is said also to render it to a great extent incombustible.

Office of "The Builder," and of all Booksellers

AGENTS WANTED for the EMPIRE ASSURANCE COMPANY, 41, Pall-mall, London. The Agents of the EMPIRE ASSURANCE COMPANY are entitled, in addition to the ordinary commissions, to a direct and substantial interest in the profits of the Company. Every Director has qualified for his office by taking down 500 in shares. Prospectuses, posfree, and every information, on application to
EDWIN H GALSWORTHY, Actuary and Secretary

TO CARPENTERS, BRICKLAYERS, PLASTERERS, LATHERS, &c.
A FEW sober and good WORKMEN of each Trade required. Wages, 3s per day, or at piece-work. Distance about thirteen miles from town.—Address, during the ensuing week, to S. B. Office of "The Builder"

TO MASONS.
GOOD WORKMEN may find EMPLOYMENT, by applying to Mr. R. IRELAND, Ipswich Cemetery.

PROFESSOR ARMSTRONG, C.E. has a VACANCY for TWO PUPILS, who may be desirous of becoming acquainted with CIVIL ENGINEERING, SURVEYING and LAND AGENCY. He can offer the privilege of attending the Seventh Course of Lectures at the Royal Agricultural College, besides a constant superintendence at a comfortable home. For terms apply to Professor ARMSTRONG, C.E. 8, Chesterton-terrace, Circucester

TO LAND SURVEYORS
WANTED, for an important Survey in the north of England, an ASSISTANT, thoroughly experienced in the above branch. Apply, with reference, stating terms, and where last employed, to Q X Office of "The Builder."

WANTED, a well-educated YOUTH, not younger than 15, in the office of an Architect and Surveyor, as pupil, for two or three years. No premium required. Address, in own handwriting, T. S., Applegarth's News Office, Duke-street, Adelphi.

TO PARENTS AND GUARDIANS.
WANTED, a respectable YOUTH, as Outdoor Apprentice, to learn the Art of Wood Engraving. A small premium expected. References given and required. For further particulars apply to Mr. C. W. SIEBERS, 83, Fleet-street, or 14, Upper Barnsbury-street, Islington.

TO ARCHITECTS AND SURVEYORS.
WANTED, a Young Man (to reside near the turnpike, Holloway-road, Islington) competent to assist in Surveying and Drawing Plans, and as a Clerk of Works.—Address, H G Post office, Wells-row, Upper-street, Islington

WANTED immediately, in an Architect's Office in the country, an ASSISTANT, possessing a good knowledge of construction, who is also a fair draughtsman, and has a knowledge of estimating, measuring, &c. Apply, stating terms and references, to Mr N. L. STEVENS, Architect, Tunbridge Wells.

TO SURVEYORS AND BUILDERS' CLERKS.
WANTED, immediately, in a country town, a PERSON thoroughly qualified in all the duties of an office. A person with a good knowledge of constructive, and a fair plain draughtsman, quick at figures and accounts would be preferred. None but persons fully capable need apply.—Address, with age, particulars, and salary, in own handwriting, to A. B. Falcon-wharf, Blackfriars, London.

WANTED, by a Draughtsman, a SITUATION in a Civil Engineer's or Architect's Office.—Address J. W. B Brassington's Library, Kenilworth

TO BUILDERS.
WANTED, by a Young Man, a SITUATION as Foreman of Brickwork, or General Foreman Good references can be given from last employers.—Address G. F. 12, St. Mary-square, Kennington-road, Lambeth.

TO ARCHITECTS, SURVEYORS, AND BUILDERS
WANTED, EMPLOYMENT as JUNIOR CLERK, by a Young Man, 20 years of age, who has been several years in an Architect's Office in a cathedral city. Salary not so much an object. Can give respectable references.—Letters to be addressed to W. B. 41, Davies-street, Berkeley-square

TO CONTRACTORS, BUILDERS &c
WANTED, by a Young Man, 26 years of age, who has had several years' experience as GENERAL CLERK and BOOKKEEPER, a similar SITUATION. He has just terminated an engagement upon extensive waterworks. Salary moderate. Reference excellent.—Address, A. B 79, Bridport-place, Hoxton.

TO LAND AGENTS AND SURVEYORS.
WANTED, by a Young Man, an ENGAGEMENT in a Land Agent and Surveyor's Office, as DRAUGHTSMAN Satisfactory testimonials.—Address, B. B. Mr. Bateman's, Law Stationer, Tooke's court, Chancery-lane.

TO BUILDERS.
WANTED, by a Young Man, aged 24, a SITUATION, in a Builder's Office, or partly in office and partly at the bench. Can be well recommended.—Apply to D. T. Office of "The Builder."

TO BUILDERS, ARCHITECTS, AND ENGINEERS.
WANTED, a SITUATION as Foreman of Bricklayers, General Foreman, or Clerk of Works, by an experienced, active man, aged 35. Can make working drawings, set out and measure works; accustomed to extensive works, both architectural and engineering. Unexceptionable testimonials.—Address, P A Post office, High street Nottting-hill.

WANTED, a SITUATION, as CLERK of the WORKS. Is thoroughly experienced in all the branches of the building. Is a good plain draughtsman, and has first-rate testimonials.—Address, A. D. 20, Gresham-street West, City.

TO BUILDERS, CARPENTERS, &c
WANTED, by a Young Man, who has served part of his time to a carpenter and joiner, a SITUATION as IMPROVER. Wages not so much an object as constant employment. Address, S. B 26 Upper Carlisle street, Maida hill

TO BUILDERS AND OTHERS.
WANTED, by a respectable Young Man, who has been some years in a builder's office, a SITUATION as CLERK in a builder's or any other office connected with the building trade. Can be well recommended by his late employers. Salary not so much an object as a lengthened engagement.—Address, J. F. No. 6, York-place, city-road.

TO PATTERN-MAKERS.
WANTED, a steady respectable MAN, who thoroughly understands his business, and who may depend upon a permanent situation.—Address, prepaid, to Messrs. GRAFTON and HOOD, Eagle Foundry, Oxford.

TO ARCHITECTS
THE Advertiser, who is an excellent DRAUGHTSMAN, and has had great experience in detail and construction, is open to an ENGAGEMENT.—Address, H. W. 33, Michael's-place, Brompton.

TO ARCHITECTS AND BUILDERS
TWO ARCHITECTS, not having their time fully occupied, would be glad to make arrangements with gentlemen who may require ASSISTANCE in the preparation of designs, detail, finished, or Perspective Drawings, and specifications. At the Advertiser's own office, or, on moderate terms.—Address A. Z. Office of "The Builder"

TO SURVEYORS' CLERKS.
THE Advertiser wishes to meet with a Gentleman who would give him INSTRUCTION in taking out QUANTITIES.—Address, stating terms, to O. L. M. Office of "The Builder."

THE Advertiser, aged 22, desires a RE-ENGAGEMENT; he is a fair architectural draughtsman, a good accountant, can make up, plan, and take out quantities, and is thoroughly acquainted with book keeping, and the principles of levelling and surveying. Salary per week. It is improvement being the object.—Address, X. Y. Mr. Lowe's, Law Stationer, Bellyard, Temple-bar.

THE Advertiser would like to ENGAGE HIMSELF with a BUILDER or ARCHITECT as an ASSISTANT or SECOND CLERK of WORKS. He is a good draughtsman, 32 years of age, has been two years as clerk in a first-rate architect's office, and would like to have a little more practical knowledge. Can show testimonials of his last engagements as for character and abilities. Salary moderate. Address, P. D. 184, York-street, Stretford road, Manchester.

TO ARCHITECTS AND SURVEYORS.
THE Advertiser is desirous of a SITUATION in either of the above offices. He has been accustomed to prepare fair working detail, and other drawings; measuring up works, &c.—Address, A. B. C. 25, Johnson's place, Harrow-road.

TO BUILDERS AND CARPENTERS.
THE Parents of a respectable Youth, of superior education, wish to APPRENTICE him to the above line for five years. No objection to a moderate premium. Good references will be given, and expected.—Address, T. L. Post-Office, Hendon, Middlesex.

TO ARCHITECTS AND CIVIL ENGINEERS.
THE Advertiser, who has had experience for fifteen years in Architects' and Engineers' offices, will be open to a RE-ENGAGEMENT at the end of this month. Age 30. Excellent references.—Address, Q. E. D. care of Mr. Scully, No. 2A, Church-street, Pimlico.

TO THE PROFESSION.
THE Advertiser, a Surveyor, and Author, wishes to join an established Architect in sharing the expense of Office, and where the occasional assistance in surveying and valuing, or the preparation of drawings, would be an advantage. This offers a good opportunity for a provincial architect desirous of having offices in town.—Address, IONIC, Office of "The Builder"

DRAUGHTSMAN, Engineering and Mechanical. The advertiser, who has worked for some of the first civil engineers in London, and latterly he engaged two years on mechanical drawings at the Enrolment office, wishes for a RE-ENGAGEMENT.—Address, G. S. L, 10, Windsor-terrace, Pimlico.

BARRACK COMPETITION.—Any Gentleman requiring ASSISTANCE in the above, or in any other business, may obtain the same by applying to S. P. No. 20, Johnstreet, Bedford-row, where he may be had spacious rooms for chambers and board rooms (well adapted for competitions). Designs, plans, specifications, and estimates prepared.

TO BUILDERS AND AUCTIONEERS.
A HIGHLY respectable Young Man, age 25, requires a SITUATION in one of the above Offices. He served his time to a Builder and Surveyor in the Country, and has since been eighteen months in a Builder's Office in Town. Salary required, 35s per week.—Address, W. W. S. Office of "The Builder."

A PERSON, who has a good general practical knowledge of the building trade, is open to an ENGAGEMENT. Can make fair and detail drawings, take out quantities, is conversant with the duties of an Architect's or Builder's Office, and has had the superintendence of works. Unexceptionable references can be given.—Apply, H. T 33, Union-street, Birmingham.

TO ARCHITECTS AND SURVEYORS.
A YOUNG MAN, of business habits, who is about leaving his employer, wishes for a SITUATION; is a fair draughtsman, and understands the general principles of surveying. For further particulars and salary, address, PERSEVERANCE, Office of "The Builder."

TO BUILDERS, SURVEYORS, AND OTHERS.
A CLERK, who is a good draughtsman, WANTS EMPLOYMENT; can get out perspectives, and is well grounded in every respect; has also knowledge of practical building. Aged 29. First class reference.—Address, Y. Z. Mr. Astery, 22, Cannon street, City.

TO BUILDERS.
A GENERAL FOREMAN of Plasterers, who has done extensive works in town and country, is in want of a SITUATION.—Address, B. H. 26, Craven-street, City-road.

A BUILDER'S CLERK is OPEN to a SITUATION at a moderate salary. Satisfactory references can be given.—Address, W. C. J. care of Mr. Deakin, Signal Works, Eyre-street, Southwark Bridge road.

TO ARCHITECTS, SURVEYORS, SOLICITORS, BUILDERS, AND OTHERS.
A RESPECTABLE, persevering Young Man, having part of his time disengaged, would be happy to meet with any gentleman in the above profession, or otherwise, requiring occasional assistance, or in copying and tracing drawings, specifications, &c &c. Terms moderate. Unexceptionable references will be given. Address, L. H. Post office, King William-street, City.

TO ARCHITECTS
A GOOD and Expeditious Draughtsman, who is perfectly capable of getting up working and finished drawings, perspectives, &c, is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, F. S. 10, Granby-street, Hampstead-road.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.
A YOUNG MAN, aged 23, who has a practical and general knowledge of the profession, would be glad to meet with a SITUATION, with a moderate salary. He has had eight years' experience, and can have good references.—Address, PERSEVERANCE, 68, Bemerton-street, Caledonian-road.

TO ARCHITECTS AND BUILDERS.

A STEADY MAN, aged 42, wants a SITUATION as CLERK of WORKS or GENERAL FOREMAN. Address, T. H. 78, Little Britain.

A GENTLEMAN who can design, make plans, elevations, sections, working and detail drawings, wishes for a RE-ENGAGEMENT in an Architect's Office. Country preferred.—Address, M. C. Post-Office, New Brentford.

MORTGAGES and LOANS ready to be ADVANCED upon Freehold and good Leasehold Property, in sums of 200l. and upwards; also upon Tithe Rent Charges, Absolute Reversions, Annuities, Life Interests, Government and Railway Stock, Debentures, Bank and other Public Securities, &c. for long or short periods.—Apply to Messrs. TRIPP and CO. 17, Parliament-street, London.

MONEY upon MORTGAGE to LEND.—20,000l. in one sum or in two sums of 10,000l each, ready to be immediately lent upon approved freehold property. Also a sum of 6,000l in one or smaller sums, upon freehold or leasehold property completely finished.—Apply by letter, with full particulars, to Mr. CLARKSON, 48, Penton-street, Pentonville.

LOANS at 5 per cent. on personal security, in connection with life assurance 5 per cent preferred. No delay. ENGLISH and FOREIGN OFFICE, 145, Oxford-street. LEWIS HERTSLET Secretary.

TO BE LET, on a building lease, an eligible PLOT of GROUND, with two frontages (together, about 468 feet in length), with a large quantity of old materials on the ground.—For particulars, and an order to view, apply to W. C. REED, Architect, 64, Old Broad-street, City, where a plan of the ground can be seen

TONBRIDGE, KENT.—TO BE LET, with immediate possession, in consequence of the death of the occupier, spacious BUILDING PREMISES, situated in the centre of the town of Tonbridge, consisting of capital dwelling-house, workshops, store rooms, drying-shed, stables, yard, &c. No stock or fixtures need be taken.—Apply on the Premises, or by letter, to H. and B. CONSTABLE, Penshurst, Kent.

KENSINGTON GORE.—Valuable SITES for FIRST-CLASS MANSIONS in the NEW (Prince Albert's) ROAD, KENSINGTON GORE (with frontages to the park-like property purchased by the Royal Commissioners for the Exhibition of 1851 as a site for Institutions connected with Science and Art), may be obtained upon ninety-nine years' lease, by application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

KENSINGTON PALACE GREEN.—TO BE LET, by PUBLIC TENDER, on WEDNESDAY, the 1st of AUGUST next, on building leases, SEVEN PLOTS of CROWN LAND, part of the late Royal Mews, at Kensington Palace Green. For terms and particulars, apply at the Office of Her Majesty's Woods &c. 1, Whitehall-place; or at the Office of JAMES PENNETHORNE, Esq. 7, Whitehall yard.

WATERLOO BRIDGE WHARF, Commercial-road, Lambeth.—These spacious PREMISES, with two wood wharfs, situate in the Waterloo-bridge road, TO BE LET on LEASE. There are two capital houses, with counter and scaffolding on the wharf; and the premises, which have been used as a lumber-yard for nearly forty years, are in good repair.—For terms apply to HENRY MOTT, Esq. Solicitor, 4, King's road, Bedford-row.

LOWER THAMES-STREET. — TO BE LET, by Tender, by the Worshipful Company of Armourers and Braziers, on a Lease for Twenty-one years from Midsummer 1856, the extensive Premises known as the GLOBE YARD WAREHOUSES, situate in the above street, nearly opposite the Custom House. The lessee will be required to pay all taxes and rates, including sewers and militia rates, and all assessments for sanitary purposes, and the expense of fire insurance, the land-tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd OCTOBER next, where parties making the same are required to attend the following day, at HALF-PAST TWO o'clock. The Company do not bind themselves to accept the highest or any other Tender.

JOHN PONTIFEX, Clerk,
5, St. Andrew's-court, Holborn.

NORWOOD.—SITES for Single or Semi-detached VILLAS, TO BE LET, within three minutes' walk of the Norwood Station, into which west end trains work as those from London-bridge will shortly run. Houses are in process of erection, and will be finished to suit purchasers or tenants requiring them to be so. For particulars apply to W. F. LOW, Esq. Solicitor, 67, Wimpole-street, Cavendish-square.

TO BUILDERS and OTHERS.—Several allotments of FREEHOLD LAND, situate in Kent, TO BE SOLD by private contract.—Apply to Messrs. DUNN and GIBBS, Auctioneers, 7, Great Tower-street, City, and Northfleet, Kent.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 265, Black Friars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Ironmongery business to dispose of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO CAPITALISTS.—An excellent opportunity for Investment.—A Seventeen Years' LEASE of a BUSINESS to USE, one door from Regent street, producing an improved annual rental of 40l. TO BE SOLD.—For particulars apply to Mr. BARNETT, 146, Regent street, if by letter, prepaid

TO CARPENTERS and BUILDERS.—TO BE DISPOSED OF, a good old-established BUSINESS capable of considerable extension, within three miles of the Bank. The premises consist of a nice house, extensive yard, excellent workshops, sawpit, and stabling, fitted up with every convenience. Immediate possession if required. Direct, L. H. Office of "The Builder."

TO BUILDERS, CAPITALISTS, and OTHERS.—TO BE DISPOSED OF, an old established and very profitable BUSINESS of Builder, Bricklayer, Lime and Cinder Burner, and Coal Merchant, situate in the immediate vicinity of Norwich, with excellent landing-wharf, and using the River Wensum, and now in full operation. The above business has for the last forty years been carried on upon premises held with every convenience for continuing a very extensive trade, no expense having been spared in the erection of all necessary buildings and apparatus, including steam engine, pipe machines, &c. the manufacture of sanitary pipes and drain tiles of every description, with mill, pan, and tub mills of the most approved construction, and every business requisite. There is an ample supply of water from a pump worked by steam power. There are brick and pipe kilns, drying sheds, &c. in addition to barn, in which the surplus boat thereto, large lime kiln and coal-shed, capable of containing 2,000 tons of coals, and shed-room for several hundreds of chaldrons of cinders, which are manufactured for both malting and foundry purposes. There is an excellent house keepers' coal trade, and the whole of the business is carried on with an old-established connection of the highest respectability in Norwich, Norfolk, and Suffolk. The above Premises will be sold, or let for a term of years, and the stock may be taken on easy terms; the goodwill will be included in the lease or purchase. The only reason for relinquishing this desirable business is the Proprietor's intention to retire. Arrangements can be made for an immediate occupation.—Applications to be addressed to Mr. G. B. COALMAN, Castle-meadow, Norwich.

ARUNDEL SOCIETY.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders for post receive the most prompt attention.—WILLIAM PIGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING of all descriptions. Also an extensive stock of Dry White, Yellow, and Pine Cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash-sills, at reduced prices for cash. The Monthly Price Current forwarded on application.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings. A large stock of dry flooring at low prices. Southwark-bridge Wharf, Bankside.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the still further reduction, owing to the recent fluctuations:—

Pine Planks, 13 ft. 3 in. by 11 in.	from	3s. 6d. each.
Spruce Deals	9 in. by 3 in.	9s. 8d. "
Yellow ditto		4s. 0d. "
Honduras Mahogany, in logs		0s. 4½d. per foot.
Ditto ditto, in planks and boards		0s. 5d. "
Spanish ditto		0s. 7d. "

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS, CONTRACTORS, AND CONSUMERS OF ASH TIMBER.

FOR SALE, a large quantity of FIR POLES (Larch), suitable for railway fencing; about fifty loads of English Oak Timber, cut in spring 1854; a quantity of Oak Scantling (dry); also 100 loads of good Ash Timber, and 30,000 good kiln-burnt Bricks, all lying within two miles of a station on the London and Brighton Railway.—For particulars and prices apply, post-paid, to Mr. JOHN PUTTOCK, Horsham, Sussex.

WOOD FENCING.—WANTED, about 7,000 feet in length of CLOSE FIELD FENCING, 6 feet high. Persons disposed to supply and fix the same will please give description and price, by letter, to R. G. Post-office, Wellington, Upper-street, Islington.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally, that he has carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, wrought out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.
WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer, with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, Builders, &c. his new and fashionable designs for Architraves and Skirting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L. are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade.—N.B. All customers having an account at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by those who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, inclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, delivered at my own door for cash only. C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 21, Manor-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. per cwt. given for old lead.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross

GEORGE NOKES and CO. (late Architett and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, stable bars, match-boarding, skirtings, flooring, &c. and have always on hand a large stock of sea and kiln dried flooring, planed prepared; also, timber, deals, scantling, sash sills, mahogany wainscot, &c. Goods sawn at the mills fetched and delivered free of charge.
May 19, 1855.

ROYAL POLYTECHNIC INSTITUTION. The Effect of Russian Infernal Machines on Vessels demonstrated daily, at 3 45 and 8 45.—The Arctic Collection of John Barrow, e q including the Relics of the Franklin Expedition, on view daily.—Lecture by J. H. Pepper, esq. on the Transmission of Vocal and Instrumental Music through solid Conductors; illustrated by the Orpheus-lyre Union of Tone and Light on Monday, Wednesday, and Friday.—The "Singing Mouse," at Four and Nine.—Dissolving Views of the late Battles, Diorama of San Sluck, &c. &c.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither are exposed to heat, nor spread chemicals in the air. It is scientifically free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK and LONDON—PATENT. And if not so marked the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Grant Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Plastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, and to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses These well-known hard Stuccoes dry quickly, and may be painted upon within few days—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, Manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with special reference to its destination, whether for concreting, brickwork, blocks for breakwaters, canal work, or otherwise. London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. RANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent, and all other Cements in use for building purposes, Pine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, RUEL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Plastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs. Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone. CHARLES RICHARDSON, 6, South Wharf, Paddington.

SOUTHAM.—BLUE LIAS LIME, and CEMENT WORKS.—OLDHAM and TATHAM'S Blue Lias Lime, Portland, Roman, and Lias Cements. CHARLES RICHARDSON, 6, South Wharf, Paddington.

31, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality, manufactured on the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise. Apply to G. BOOTH, agent, as above.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement The best lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, Bouverie-street, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), and NORTH WHARF-ROAD, Paddington.

WILLIAM PETTES begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON ABSORBENT: one quantity of rain having many effect upon it, and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers.—Office, 4, George yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin, Finsbury; that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbeach, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 6 inch pavings, at 40s. per 1,000; 8 inch pavings at 60s. per 1,000; 9 inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely luminous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO Wholesale Agents, 62, King William-street City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham court, New road. In Manchester and Liverpool by R. and A. S. Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H J BUCHAN Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 12, Manchester buildings, Westminster.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L B PEARSE and CO Brick, Tile, Lime, and Cement Merchants Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand; approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

TO CONTRACTORS, BUILDERS, AND OTHERS.

FINE hard WHITE FACING BRICKS, superior to any Brick used in London, and suitable for first-class houses, churches, or chapels. The public are invited to see a specimen now used in the front of a house in Tower-street.—For particulars apply to Messrs DUNN and GIBBS, 7, Great Tower-street, City.

N.B. Reference is also permitted to Mr. C. ALDIN, Builder, Nightingale-lane, Clapham-common, where the bricks may be seen as facing for several mansions.

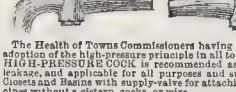
O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

GUNPOWDER MAGAZINE.—Gunpowder Manufacturers, Quarrymen, &c. requiring Powder to be stored for the supply of South Wales, Bristol, Gloucester, Worcester, Stourport, &c. may be accommodated at Cumbwich, on the Bridgewater river, by applying to Mr. FREAN, Plymouth, Devon.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 3.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is now of experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, one, two, three, and four guineas each, yielding 30, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers, &c. &c. is particularly requested to a newly-invented PIPE for CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure, it is comparatively flexible, easily joined, has great power of resisting the effect of frost, and what is of still higher consideration, is perfectly innocuous. This combines a desirable properties is produced by lining Ice'en pipes with gutta percha.—Further information may be obtained on application to the Patentees, Messrs STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City-road, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best bolland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, to the adornment of our noblest buildings. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and manœuvrers, with only three or four years' experience, and without practical knowledge. Some of the works recently completed by M. H. B. can be referred to the whole of the embellishments to the external part of Clifden House, his Grace the Duke of Sutherland's; also Tottenham and Kingsland Churches, the turrets to the Camden-road Chapel, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 12 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the supporters, for the Kent Mutual Insurance, Queen street; and other works elsewhere, too numerous to mention. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and 1 patterns commencing at 1s. per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

FOWLER'S

N.B Coachyard Aprons and Railway Engine seats and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the

admission of pure air through an EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draughts being felt by the occupants, and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

VENTILATION.

D. and E. BAILEY beg to call the attention of Architects and others to their improved CIRCULAR ARNOTT VENTILATORS, which are more sightly than the square ones in general use, much less liable to get out of order, and the flaps, being hung from the top, do not admit any smoke caused by down draught.

Price, bronzed, from 6s. 6d.

D. and E. BAILEY, 273, Holborn.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer and is about 30 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inches diameter, and prices per yard.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 39 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry hair Felt, for covering Boilers, &c. is also manufactured by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as the only works in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

SALES BY AUCTION.

LETT'S WHARF, COMMERCIAL-ROAD LAMBETH.

MESSRS. FULLER and HORSEY will SELL by AUCTION, as a lot, on TUESDAY, JULY 31, 1855, at ELEVEN o'clock, in lots, with an reserve, by direction of the assignees of Messrs. Rowland Lyon and Co., of SUNNING-HILL-STEAM-DYE-WORKS, Berkshire, and Messrs. Lyon, Lyon, and Co., of Whitechapel, and Car., of Belper, including the double and four-single-lift frames, the timber frame to cost 27 inches in depth, one planing, tonguing and matching machine, the whole quite new, and having yet been fixed; and made on the most approved construction. To be viewed on Monday previous to the sale, when catalogues may be had on the Premises; of Messrs. HODGE, Pitching, King William-street, Strand; and of Messrs. FULLER and HORSEY, Bullister-street, City.

TO IRON SHIP BUILDERS, IRON MERCHANTS, SHIP-CHANDLERS AND OTHERS.—By

MESSRS. FULLER and HORSEY, at the DREADNOUGHT YARD, Thames-street, Greenwich, on FRIDAY, JULY 27, at ELEVEN, by direction of the Assignees of Messrs. Routledge, a bankrupt, in lots, without reserve, ONE HUNDRED and FIFTY TONS BAR, PLATE, and ANGLE IRON, English best crown, and Staffordshire best charcoal, 60 tons burnt iron, one ton of rope, quantity of rigging, wood blocks, eight cast wrought iron press screws and nuts, quantity of cast-iron flanged pipes, five lengths 15-inch cast-iron screw pump barrel, 15-inch cast-iron paddle-wheel shaft, 14-inch cast-iron six new patchway tarpaulings, mahogany and deal boards, and a large quantity of timber, to be drawn and sold by the purchaser. To be viewed on THURSDAY previous to the sale, when catalogues may be had on the Premises; of Messrs. HOWARD and BULLOUGH, Solicitors, 26, Bridge-street, Southwark; of — BELL, Esq. Official Assignee, Chancery-lane-buildings, and of Messrs. FULLER and HORSEY, Bullister-street, City.

A Pair of new 25-horse power Pendulous Steam-engines, with Boilers.—By

MESSRS. FULLER and HORSEY, on the PREMISES, Letts-wharf, Commercial-road, Lambeth, on TUESDAY, JULY 31, at ELEVEN, by direction of the Assignees of Messrs. Routledge, a PAIR of NEW STEAM-ENGINES, of 25-horse power each, with double cylinders for high and low pressure, constructed by Dodgson, Greenwich, on his patent pendulous principle. The engines are made in a very superior manner, in Gothic frame, with tooth fly wheel 15 feet diameter, and most effective driving motion. They have not yet been fixed, but will be fixed free of charge to a purchaser in any part of London, or at a small charge, if required to be fixed at a distance from London. Also TWO NEW CORNISH BOILERS, 26 feet long, 6 feet 6 inches diameter, with tube 3 feet 6 inches diameter To be viewed by cards only. Catalogues may be had of Messrs. Howard, Solicitors, 24, King William-street, Strand; and of WILLIAM PENSELL, Esq. Official Assignee, Basinghall-street; and, with cards to view, of Messrs. FULLER and HORSEY, Bullister-street, City.

TO BUILDERS, COAL MERCHANTS, CORN DEALERS, and Others requiring extensive Premises, or persons desirous to obtain a second private residence, or for investment, CHRIST-CHURCH, HANTS.

MR. JOHN ABBOTT has been favoured with instructions from the proprietor to SELL by AUCTION, at the HOLMES HOTEL, on TUESDAY, the 24th of JULY, 1855 (unless an acceptable offer be made previously, of which due notice will be given), all that desirable FREEHOLD PROPERTY, situated at Purewell, comprehending a genteel, newly-built substantially erected Dwelling-house, with ornamental shrubs and flower garden in front, a good kitchen, with large yard, capital workshops, sheds, stables, and gig-house, with about 2 acres of very productive pasture land all adjoining, with valuable rights for depasturing cattle. On the premises the business of a builder has been success fully carried on by the present proprietor and his predecessor for the last half century, and it is now brought into the market solely on account of family arrangements. Further particulars may be had of the owner and occupier, Mr. THOS. CONNISH, on the Premises; of Messrs. SHARP, Solicitors, Christchurch and Lymington; or of the Auctioneer, Bridge-street Christchurch.

IN BANKRUPTCY.—Re John Mitchell, Warminster, Wilts.—To Carpenters, Builders, and others.

MESSRS. DAVIS and VIGERS are honoured with instructions from Mr. Commissioner Fane to submit to PUBLIC AUCTION, on FRIDAY, JULY 27, at the SMITHY, Messrs' Arms yard, and on SATURDAY, JULY 28, at the KING'S ARMS YARD, Warminster, at TWELVE for ONE o'clock each day, THIRTY-FOUR powerful YOUNG MACHINE HORSES, in excellent working condition; a valuable hunter, 15 years old, and a useful cob; three strong road-waggons, six carts, two timber carriages, two useful dog-carts, one chaise-cart; fifty sets of thill and trace harness, thirty horse clothing sets, chaff box, and various stable implements; also two five-ton travelling-cranes, nine casks of cart-grease, sixteen dozen new sh ets and stocks, ½ ton of railway-spikes, chain-cables and cables, &c.; ten tons of wrought and cast iron chain couplings, &c.; portable forge, forge-tools, navvy barrows, wedging planks, picks, crowbars, and numerous items of miscellaneous effects, collected and removed from the works for the convenience of sale. May be viewed the day previous and morning of sale, and catalogues had of Messrs. Pittmore and Lowman, Solicitors to the Fiat, 68, Old Broad-street, London; at the Red Lion Inn, Salisbury; the Angel Inn, Heytesbury; the Deptford Inn, Wilts; the London Inn and Mason's Arms Inn, Warminster; and of the Auctioneers, 3, Frederick's place, Old Jewry, E. and C.

THE LYNMORE PARK ESTATE, comprising about thirty three Acres of Building Land, beautifully situate at Woodside, between Norwood and Addington, in the County of Surrey.

MESSRS. WINSTANLEY are directed to SELL, by AUCTION, at the AUCTION MART, on MONDAY, 23rd JULY, a valuable FREEHOLD PROPERTY, including two lots, and forming a portion of part of about thirty-four acres of most eligible building land, commanding very extensive views of the distant and immediate picturesque scenery, the Crystal Palace, &c. &c., approached from the high road from the Norwood Station, from which it is only a short distance. There principal roads (40 feet wide) have already been formed, extending through the land to Woodside-green, on which there is a very considerable frontage, but there is full scope for the formation of others to create frontages to a much greater extent. The fottage stabling, and premises (including the green) are also included in the sale. There are two churches in the vicinity. A plentiful supply of spring water is already on the premises, and the pipes of the Thames Water Company are laid within a few yards of the estate. In the hands of a building society or capitalist this property offers attractions of no ordinary character. The estate can be viewed upon application to Mr. Hammond, at the cottage. Printed particulars, with plans annexed, may be obtained of Messrs. Dutchmans, Rousseau, and Tite, Solicitors; Messrs. Burt, Auctioneers; of Mr. Joseph Berger, Croydon; and at the Greyhound Inn, in Croydon; at the Windmill Inn, St. James's-road, Croydon; the Jolly Sailor and White Lion Inns, at Norwood; the Crystal Palace, Anerley; the Greyhound, Dulwich; and, in London, at the Place of Sale, of Mr. Draper, Globe Tavern, Hatton-garden; and of Messrs. Winstanley, Land and Estate Agents, 1, Paternoster-row.

TO HOUSE DECORATORS BUILDERS, AND OTHERS.

MR. EDWIN WHITE will SELL by AUCTION, with an reserve at his ROOMS, 126, Bishopsgate-street Without, on WEDNESDAY, the 25th of JULY, at TWELVE for ONE precisely, about 7000 PIECES of superior PAPER HANGINGS, comprising flocks, damasks, marbles, chintzes, and others, suitable for parlours, bedrooms, staircases, &c. Also a small consignment of French Hangings and Decorations. Catalogues and view day prior and morning of sale.

MARBLE.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—

MONDAY, 6th AUG.	MONDAY, 1st OCT., 1855
MONDAY, 3rd SEPT.	MONDAY, 5th NOV.

Catalogues and further particulars to be had on application one week previous to each sale.—The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE.

SALES BY AUCTION.

FARRINGDON-STREET EXTENSION.—Building Materials of Twenty Houses.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on THURSDAY, JULY 26, and following day, at TWELVE, by order of the Improvements Committee of the Corporation of the City of London, all the valuable BUILDING MATERIALS and FIXTURES of about twenty houses, shops, stabling, slaughter houses, and extensive premises, in Turnmill-street and Bowling-street, Clerkenwell, comprising about 500,000 good sound bricks, oak and fir timber, in roofs and floors; sashes, doors, floor boards, shop fronts, York and pebble paving, rocks, mangers, and large folding gates; several tons of lead, in gutters and pipes; large quantity of plain and pantiles; counters and drawers, cranes and jibs, gas fittings, stoves, ranges, and numerous pictures and fittings up.—May be viewed two days previous. Catalogues had at the Architect's Office, Guildhall, and of PULLEN and SON, 80, Fore-street, Cripplegate.

Steam Saw-mills, with large Yard and Workshops and extensive Builder's Premises attached.

PULLEN and SON are directed to SELL by PRIVATE CONTRACT, in-state PREMISES, with complete SAWING MACHINERY of the most approved construction, fitted up within a recent period at a vast expense, including two capital steam-engines of 30-horse power each, 20-horse boiler, and chimney-shaft 60 feet high; two vertical deal frames; three circular saw-benches, with 3 feet 6 in. segment saws; self-acting saw-bench; mortising and tenoning machines, &c. The whole could be set off in further particulars may be obtained of PULLEN and SON, 80, Fore-street, Cripplegate.

TO CONTRACTORS, BUILDERS, &c.—TO BE SOLD by AUCTION by

MR TURNER, at KETTON QUARRIES, near Stamford, on THURSDAY, the 26th JULY inst. about 4 00 feet of KETTON FREESTONE, of first-rate quality, in blocks of from 1 cwt. to 5 tons and upwards, which may be seen on application to JOHN HALES, of Ketton. Credit on approved security for twelve months. The Auctioneer requests the company to meet him at MR. EDWARDS'S, White Hart Inn, Ketton, at TWO o'clock, when he will immediately proceed to sale.

Edithweston, July 16th, 1855.

PARK-WALK, CHELSEA.—Very valuable Building Contract of Ground, upon which eight villas have been erected, with space for twenty-four more, roads and sewers complete!

MESSRS. FAREBROTHER, CLARK, and LYE are instructed to SELL, at GARRAWAYS, on WEDNESDAY, JULY 25, by direction of the executors of the late Robert Chambers, Esq., a very valuable BUILDING CONTRACT of a PIECE of LAND, situate in Park road, in the rear of Park-walk, Chelsea, near to Camera square and the Park Chapel, with access from the Fulham-road, for a term of ninety-nine years, at ground-rents to be separately reserved. Eight genteel semi-detached villa residences have been erected, six of which are let on leases at eight pounds and two are in hand, and of the annual value of 90l. There is space for the erection of twenty-four more villas. The roads and sewers have been completed. This forms a most desirable property for a capitalist or enterprising builder, being sold in consequence of the death of the owner.—May be viewed, and particulars had of Messrs. Williamson, Esq. Solicitor, 5, Red Lion-square; at Garraway's; and at the Offices of Messrs. Farebrother, Clark, and Lye, Lancaster place, Strand.

Important to Builders, Farmers, Railway Contractors, Wood and Timber Merchants, and Others.

MESSRS. DUNN and GIBBS will SELL by AUCTION, at the DOCKYARD, Northfleet, Kent, on WEDNESDAY, JULY 25th, at half-past ONE for TWO, 700 Pairs of TEAK GRATES and RISINGS, English, Pantiles, and African teak and Rock Elm Slabs, English and Pantile Oak Edging, English Oak and Elm Tops, Oak; fir and mixed fire-wood; lot of ornamental wood pillars, lot of ship timbers, lot of oakum, and rope-netting, &c.—May be viewed Monday and Tuesday before the sale; and catalogues had on application at the Dockyard, and at the Auctioneers' Offices, 7, Great Tower-street, London, and Northfleet, and sent free on application.

BARKING, ESSEX.—Thirty-three Plots of Freehold Building Land.

MR. W. H. DEAN will SELL by AUCTION, on TUESDAY AUGUST 14th, 1855, at the MART at TWELVE o'clock, THIRTY-THREE PLOTS of Valuable FREEHOLD LAND, ex-empted from land tax, and most eligibly situate in the preferable part of the town of Barking, and within two yards of the station of the London, Tilbury, and Southend Railway. May be viewed, and printed particulars with lithographed plans may be had at the Mart; at the Ship and Bull Inns, Barking; of Messrs. W. and H. P. Sharp, Solicitors, 2, Verulam-buildings, Gray's-inn; and of the Auctioneer, Stratford, Essex.

WOOD GRANGE ESTATE, STRATFORD, ESSEX.—Sixty one Plots of Building Land, Freehold Ground-rents, and Free hold Dwelling-houses.

MR. W. H. DEAN has received instructions to SELL by AUCTION, at the MART, on WEDNESDAY, JULY 25th, at TWELVE, sixty FREEHOLD GROUND-RENTS, a pair of Freehold Dwelling-houses, and Sixty-one Plots of Freehold Building Land, the whole exempt from land-tax. The property is situate contiguous to the Forest-gate Station of the Eastern Counties Railway, and within a short distance of the Wanstead Forest. The building ground is high and dry, having the advantage of a gravelly subsoil, and the locality is essentially healthful and picturesque, and the quick and easy mode of transit renders the situation admirably adapted for the residence of persons whose business occupation requires their daily attendance in the City. There is a great and increasing demand for houses in the neighbourhood, and this is a most favourable opportunity for purchasers to secure a certain and liberal interest for their capital. May be viewed, and printed particulars and conditions of sale, with plan, obtained (gratis) at the Auction Mart; at the Rose and Child Inn, Forest-gate; York-hire Grey and Swan Inns, Stratford, of Messrs. Young and Valiens, Solicitors to the Vendor, 2, St. Mildred's-court, City; and of the Auctioneer, Stratford, Essex.

STRATFORD, ESSEX.—Extensive Stock-in-Trade of a Builder.

MR. W. H. DEAN will SELL by AUCTION, on TUESDAY, JULY 31, and following day, on the PREMISES, near the Harrow-bridge, Stratford, the valuable BUILDING MATERIALS and STOCK-IN-TRADE of Mr. GRANITE YORK PORTLAND, and other STONE, in blocks, landings, steps, slabs, &c. rubbed and tooled, 10,000 prepared and other slates, 60,000 fire and paving bricks, a large quantity of good drain-pipes, &c. with the extensive and valuable builder's stone-yard; an excellent, nearly new, and expensive slate-cutting machine, with gear, &c. complete; also the fixtures and fittings, and a powerful travelling-crane, capable of raising many tons weight, with the strong erection of stage supporting the same. May be viewed three days prior to the Sale, and catalogues had on the Premises; and of the Auctioneer, Stratford, Essex.

PLAISTOW, ESSEX.—To Land Societies, Builders, and Others, requiring to Purchase Lands near the Metropolis.

MR. W. H. DEAN has received instructions from the executors of Mr. James Adams, deceased, to SELL by PUBLIC AUCTION, at the MART, on THURSDAY, AUGUST 16th, at TWELVE, in lots, a valuable FREEHOLD ESTATE, situate about 4½ miles from London, and comprising seventy two acres of land, with capital dwelling-house, and extensive and substantially-built farm buildings, the whole enclosed from land-tax. The estate is contiguous to the Victoria London Docks, which will shortly be opened, and within a short distance of the Barking-road station of the North Woolwich Railway, and has a frontage of 1,600 feet on the high road to London. The ground is high and dry, and, from the advantage of its situation, is eminently adapted for building or commercial purposes. May be viewed, and printed particulars had at the Mart; of Messrs. Hillman, Solicitors to the Vendors, 5, Fenchurch buildings, City; and of the Auctioneer, Stratford, Essex.

SALES BY AUCTION.

FIRST ANNUAL SALE of ARTICLES manufactured by the PATENT SILICEOUS STONE COMPANY, in their beautiful and durable Material, consisting of a large assortment of Vases, Fountains, Flower Boxes, Pedestals, Balustrades of every description; Moulded Plinths and Copings Gate Piers, Caps and Bases, Brackets and Trusses, Chimney-pieces in great variety, both plain and elaborate; Monumental Tombs, Tablets, and Headstones; Coats of Royal Arms, Ashlars, String-courses and other Dressings, &c. &c. &c.; from good Designs both for Mediæval and Renaissantal Architecture.

MR. MARSH has the honour to announce that he has been favoured with instructions from the Directors of the "Patent Siliceous Stone Company" to SELL by AUCTION, on the PREMISES, Whitehall-wharf, Cumming-row, Battersea, on TUESDAY next, JULY 24, at ELEVEN for TWELVE o'clock precisely, in lots adapted to the trade, private buyer, and others, the above important and valuable PLANT and STOCK, forming part of their extensive annual productions. To describe the articles manufactured under the above process, which has so much engaged the attention of the scientific world, is beyond the limits of an advertisement; suffice it to say, that for durability, strength, and cheapness, as well as for delicate ornamental finish, the Siliceous Stone stands unequalled, even among nature's productions. Luncheon will be provided for Purchasers. May be viewed the day prior and morning of sale; and catalogues obtained on the Premises, and at Mr. Mansh's Offices, 2, Charlotte-row, Mansion House.

Old-established Steam Saw mills, with Wharf, abutting on the Portsmouth Harbour, and situate contiguous to the Portsmouth Terminus of the London and South Western, and London and South Coast Railways. Freehold and with possession.

MR. MARSH has received instructions from the proprietor (after a period of fifteen years' occupancy) to SELL by AUCTION, at the MART, on THURSDAY, AUGUST 2nd (unless previously disposed of by private contract), in one lot, the valuable FREEHOLD PROPERTY, comprising the Hulbert-road Steam Saw-mills, timber yard, and business premises, dwelling-house, and foreman's house, large drying sheds, and other offices, most conveniently situate at Milo-end, Portsmouth. The valuable machinery, plant, &c. will be included in the purchase. To any party desirous of embarking in the foreign timber trade, saw-mills, &c. a more eligible opportunity is rarely to be met with. May be viewed on application, and particulars of Sale obtained of Thomas Edgcombe, Esq. Solicitor, Portsea; and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion House, London, where a plan may be seen.

SURREY.—Inviting Freehold Estate, tithe-free, and land-tax redeemed; admirably placed, about two miles distant from the Ewell, Kingston, or Malden railway stations.

MR. W. BUTCHER has received instructions to SELL by AUCTION, at the MART, Bartholomew-lane, London, on FRIDAY, 27th JULY, 1855, at TWELVE o'clock, in four lots, about twenty-five acres of very valuable LAND, in a commanding position for a villa, with the pleasing occupation of a small farm; or it presents an eligible opportunity for a building speculation of magnitude. This property adjoins Worcester-park, and has an extensive frontage to the main road from Ewell to Kingston. Particulars, with plans attached, will be ready a few days previous to the sale, and may be obtained at the following hotels:—Old Ship, Brighton; Mount Ephraim, Tunbridge Wells; Griffin, Kingston; Greyhound, Croydon; the Bridge Wells; and of the Auction Mart; of Messrs. Roy and Cameron, Solicitors, 4, Lothbury, London; of W. H. Carter, Esq. Solicitor, 71, Brewer-street, Woolwich; and of Mr. W. Butcher, Estate Agent, Epsom.

GRAVESEND, KENT.—To BUILDERS, CAPITALISTS, and OTHERS.—Valuable Freehold Building Land, and Two substantial brick-built Private Residences.

MR. CHARLES JOHNSON (business established 1764) has been honoured with instructions to SELL, by AUCTION, at the NEW INN, Gravesend, on WEDNESDAY, JULY 25, 1855, at ONE for TWO precisely, the remaining portion of the MILTON PARK ESTATE, consisting of thirty-seven plots of building land, on the east and west sides of Milton-road, with 16 feet, 17 feet, and 18 feet frontages thereto, and an average depth of 75 feet; also, four eligible plots in the Grove, with 60 feet frontages thereto, and an average depth of 96 feet. The land in Wellington-street is suitable for the erection of houses of the value of from 16l. to 20l. per annum, for which there is a steadily increasing demand. The plots in the Grove are well adapted for the erection of villa residence. Two substantially-erected private residences, Nos. 8 and 9, Berkeley-crescent, of the annual value of 78l. per annum, held for an unexpired term of 79½ years (less five days) from Michaelmas, 1855, at a very moderate ground-rent.—Particulars and conditions of sale, with plans, may be obtained free of charge on the sale, of G. Arnold, Esq. Solicitor, Berkeley-crescent, Gravesend; G. H. Knight, Esq. Solicitor, 3, Essex-court, Temple, London; Mr. J. Gedd, Jun. surveyor, Gravesend; at the Place of Sale; and of Charles Johnson, Auctioneer, 188, Parrock-street, Gravesend.

TO BUILDERS, CARPENTERS, and OTHERS.—Freehold Dwelling Houses and Business Premises, Castle-street, Guildford.

MESSRS. F. and A. MELLERSH, without the slightest reserve, at the WHITE HART INN, Guildford, on FRIDAY, JULY 27, at THREE, a FREEHOLD RESIDENCE, with a frontage to Castle-street, together with a large builder's yard in the rear, in which is erected an extensive range of workshops, sheds, the forging, and land-tax free; it is now unoccupied, and possession will be given on completion of the purchase. Also, TWO FREEHOLD DWELLING HOUSES, with shops and building premises, situate in Castle-street, now let to Messrs. Taunton and Simmonds, at an aggregate rental of 50l. 15s. per annum. To view apply to the respective tenants, and further particulars may be obtained of T. A. Curtis, Esq. Solicitor, Guildford; or of the Auctioneers, Godalming and Guildford.

CHELSEA. Important Sale of Leasehold Property for Investment or Occupation.

MR. W. F. HAMMOND is instructed by the several proprietors to SELL by AUCTION, at the COMMERCIAL SALE HALL, King's-road, Chelsea, on FRIDAY, AUGUST 3rd, 1855, at TWELVE for ONE o'clock, the above valuable PROPERTY, comprising two shops with substantial dwelling-houses, Nos. 11 and 12, Strewan-place, King's-road, Chelsea; lease, ninety-seven years, at a ground-rent on each of 8l.; rent, 42l. each. Also, in the parish of Kensington, No. 1 and 2, Grove-cottages, Kensal's-rose, two houses; lease sixty-nine years, ground-rent on each, 6l.; rental, each 24l.—Particulars, with conditions of sale, to be had at the Commercial Hall, King's-road, Chelsea; and at the Auctioneer's Offices, No. 3, Carey-street, Lincoln's-inn.

At IPSWICH 420,000 Bricks, among which are 150,000 Suffolk Whites and 200,000 Reds of superior colour, by AUCTION, by

MR. ROSS, on FRIDAY, JULY 27, at the FOXHALL-ROAD and ROSE-HILL BRICKFIELDS, in consequence of the leases expiring. Sale to commence at ELEVEN o'clock. Catalogues at the Auctioneer's Office, St. Nicholas.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddington Estate, of the value of 30l. per annum, will be entitled to a Free First-class Railway Ticket, and of every house of the value of 20l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years.—Apply to Mr. George Morgan, 3, Chancery-lane.

London: Printed by Charles Wyman, of 23, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of Cox (Bros.) & Wyman, 74 & 76, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, July 21, 1855.

The Builder,

Architect, Engineer, Operative & Artist.

JOSEPH J. JENKINS, Secretary.

THE LAST WEEK.

THE NEW SOCIETY of PAINTERS in WATER COLOURS will CLOSE their Twenty-first Annual Exhibition on SATURDAY NEXT. NOW OPEN at their Gallery, 53, PALL MALL, near St. James's. Palace, daily from nine o'clock.—Admission, 1s.—Season Tickets, 5s.
JAMES FAHEY, Secretary.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster. Midsummer Session, 1855.

On MONDAY, July 30th, a LECTURE will be delivered in the rooms of the Museum, on the PROGRESSIVE CHANGES in ORNAMENT in the SUCCESSIVE STYLES of MEDIÆVAL ARCHITECTURE. By G. G. SCOTT, Esq.; being a continuation of a former lecture.

Hour of admission, SEVEN o'clock. The chair to be taken at EIGHT o'clock.

Cards, prospectuses, and catalogues of the collection (now numbering upwards of 5,000 specimens) may be had at the Museum, and at the Office of "The Builder."

July 20, 1855. HENRY CLUTTON, Hon. Sec.

THE ARCHITECTURAL EXHIBITION will REOPEN at the Galleries, Suffolk-street, Pall-mall east, in DECEMBER next. The Committee have determined in future not to admit any drawings previously exhibited in London; they call the especial attention of all those interested to the advantages offered by the department for materials, models, patents, and sculpture connected with building. Any subscription now should be forwarded directly, as the Committee are about to close and audit the account relating to the past season.

JAS. FERGUSSON, F.R.A.S. 20, Langham-place;
JAS. EDMESTON, Jun. 5, Crown-court, Old Broad-street, } Honorary Secretaries.

COMPETITIONS.

TO ARCHITECTS.

PLANS of BARRACKS.—The Committee appointed by the Minister of War to consider the question of Barrack Accommodation for the Army, have to inform all Architects who may be desirous of competing for the prizes offered for the best plans for Infantry and Cavalry Barracks, that in consequence of the very numerous applications received from Architects, requesting an extension of the time given for the preparation of the plans, the Committee have agreed to DEFER the time limited for the reception of competing plans till the 30th of SEPTEMBER next. Each plan should be submitted under a motto, accompanied by a sealed envelope containing a copy of the motto, and the name and address of the architect. It would be desirable that the plans should be drawn upon a uniform scale: that is suggested that the general plan should in every case be drawn upon a scale of 30 feet to an inch; that the plans and sections should be shown on a scale of 10 feet to 1 inch; and that any details should be drawn upon such a scale as may show them fully. No particular site can be pointed out. Architects will assume that a level site is level. Officers of engineers and clerks of works to the Royal Engineer department will not be excluded from competition; but any plans submitted by them must be submitted under a motto, like the others. A circular will be sent to all barristers requesting them to allow architects to inspect the plans. All communications upon the subject to be addressed to Viscount MONCK, chairman of the Barrack Committee, Barrack Department, Ordnance Office.

Signed MONCK, Chairman.

Office of Ordnance, 4th July, 1855.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Office of the Inspector General of Fortifications, Pall-mall, London, on or before SATURDAY, the 4th day of AUGUST, 1855, from persons desirous of CONTRACTING for various WORKS at Dover Castle. Plans and specifications of the works to be executed, may be seen by parties disposed to tender, and forms of Tender obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 18th of JULY to the 3rd of AUGUST, 1855, Sundays excepted. No other persons need apply. The party whose Tender may be accepted for the works, will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 1,500l. for the due performance of the contract. Tenders for the above works to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Ordnance Works at Dover Castle."

N.B.—The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 4th, 1855.

NOTICE to BUILDERS.—BARRACK WORKS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that the WORKS proposed for INCREASING the BARRACK ACCOMMODATION at the WESTERN HEIGHTS, DOVER, are POSTPONED, except that portion of them which provides for building a large non-commissioned officers' and soldiers' privy, the plans and specification for which can be obtained at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 18th of JULY to the 31st of JULY, 1855. Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 200l. for the due performance of the contract. Tenders for the above work are to be addressed to the Inspector General of Fortifications, Pall-mall, London, and endorsed "Tender for Building a Privy at the Western Heights, Dover."

N.B. The Ordnance Department reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, July 9, 1855.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The Principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the Works proposed in the ERECTION of ADDITIONAL OFFICERS' QUARTERS, at the New Barracks, Limerick. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Tower Castle yard, Dublin, and at the Royal Engineer's Office, at Limerick, and may obtain specifications, with the terms of contract, upon making a deposit of 1l. for the same, which deposit will be repaid when the specifications are returned uninjured. The work to be completed on or before the 31st July, 1856. The Letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 6th of AUGUST, 1855, and to be marked on the outside "Tender for Works at Limerick."

Office of Ordnance, Dublin, 16th July, 1855.

Royal Engineer Office, Sheerness, July 23, 1855.

TO CONTRACTORS. — CONTRACT for ERECTING additional CELLS and LOCK-UP ROOM, &c. at SHEERNESS.—The Commanding Royal Engineer, Sheerness, gives Notice that TENDERS will be received at the Office of Ordnance, Pall-mall, on or before MONDAY, the 13th day of AUGUST, 1855, from such persons as may be desirous of Tendering for Erecting additional Cells and Lock-up Room, &c. at Sheerness. The plans may be seen, and printed specifications obtained, at this Office, between the hours of TEN and FOUR each day (Sundays excepted), till the 11th of AUGUST, 1855.

COUNTY and CITY of WORCESTER PAUPER LUNATIC ASYLUM.—To BUILDERS.—Persons wishing to TENDER for the ERECTION of the CHAPEL, may see the drawings and specifications at the Asylum, Powick, near Worcester, on and after WEDNESDAY, the 25th instant. Tenders to be sent to me, endorsed "Tender for Chapel," on or before SATURDAY, the 1st of SEPTEMBER. The Committee of Visitors do not pledge themselves to accept the lowest or any Tender, if not satisfactory.

MARCUS CURTLER, Clerk to the said Committee.

Pierpoint-street, Worcester, July 21, 1855.

TO BUILDERS

PARTIES willing to CONTRACT for the ERECTION of a PUBLIC HOUSE, near Poplar, Middlesex, may inspect the plans and specifications at Mr. R. SIBSON'S, No. 7, Gerrard-place, Old Round-ad, on or after TUESDAY next, the 31st JULY, between the hours of TEN and FIVE o'clock. The Tenders to be delivered on THURSDAY, 9th AUGUST, at THREE o'clock p.m. The proprietor will not bind himself to accept the lowest or any Tender.

TO BUILDERS

PARTIES willing to TENDER for sundry ADDITIONS and ALTERATIONS at HERSHAM LODGE, near Esher, Surrey, may be referred to the plans and particulars by sending their address to Mr. MATTHEWS, Architect, 75, White Lion-street, Islington, London.—Tenders to be sent in not later than the 9th AUGUST next.

LIGHTING.—CITY of WORCESTER.—Persons desirous of CONTRACTING with the Council and Local Board of Health of the City of Worcester, to LIGHT the CITY with GAS, may receive full particulars on application to Mr. JOHN HILL, Town Clerk, Worcester. The Tenders must specify the charges for Lighting per lamp for nine months, and the charges for lighting per lamp for twelve months. The Contract to find lamps, lamp posts, and all other material and apparatus. Tenders must be sent to the Town Clerk's Office, Worcester, under cover to the Watch and Lighting Committee, on or before MONDAY, the 6th day of AUGUST next.

Worcester, 24th July, 1855.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS, CONTRACTORS, and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice, that they will be ready at the Court-house, No. 1, Greek street, Soho square, on TUESDAY, the 31st day of JULY instant, at ONE o'clock precisely, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING the following WORKS, viz.:—7,265 feet in length or thereabouts, of BRICK and PIPE SEWERS, with other works in connection therewith, in Clerkenwell green and Aylesbury-street, Clerkenwell; Curtain-road, Shoreditch, Dalby terrace, City-road; Britannia-row, Islington; and Hollowar road, and other streets and places, in the county of Middlesex (in one Tender). 2130 feet in length or thereabout, of BRICK SEWERS, with other Works, in connection therewith, in New-road, Cadogan street and terrace, and Sloane-street, Chelsea, in the county aforesaid (in one Tender). 1,750 feet in length or thereabouts of BRICK SEWERS, with other works in connection therewith in Queen's-road East, Franklin's-row, White-lion-street, and Turk's-row, Chelsea, in the county aforesaid (in one Tender). 640 feet in length or thereabouts, of BRICK and PIPE SEWERS, in King street Portland-street, St. James's, Orange-street, Russ-street, &c. St. Ann's, Soho, Bedford street and court, Covent Garden, and Bear-yard, St. Clement's, in the county aforesaid (in one Tender); and for the maintenance of such works in complete repair for twelve calendar months. Plans, sections, and a specification of the above works, together with the form of Tender, may be inspected, and other particulars obtained at the principal Office of the Commissioners, No. 1, Greek street, Soho square, between the hours of NINE and FOUR each day until the 6th JULY inst. The Commissioners need not bind themselves to accept of the lowest or any Tender, and the party whose Tender shall be accepted, will be required to provide two sureties for the due performance of the works. No Tender will be received after the hour above named.

E. H. WOOLRYCH, Secretary.

No. 1, Greek-street, Soho-square,
Dated this 19th day of July, 1855.

TO BUILDERS.

THE UNITED BURIAL BOARD of the parish of St. Andrew and township of Jesmond, Newcastle-upon-Tyne, are prepared to receive TENDERS for the whole or any part of the works required in LAYING OUT and FENCING the NEW CEMETERY of the said parish and township, and for ERECTING TWO CHAPELS and ENTRANCE LODGE thereon. The plans may be seen, and printed copies of the specifications, quantities, and Forms of Tender, may be obtained at my Office, 80, Grey-street, Newcastle upon-Tyne, on and after MONDAY, the 23rd for JULY inst. Sealed Tenders, addressed to me, to be sent on or before MONDAY, the 6th of AUGUST next. Further particulars may be obtained of the Architects, Messrs. MIDDLETON and PRITCHETT, Darlington.

Hon. Sec. for the Board.
JOSEPH BLACKLOCK, Clerk to the Board.

TO BUILDERS AND OTHERS

NEW GAOL for the COUNTY of CORNWALL.—Builders desirous of TENDERING for the ERECTION of the NEW GAOL, at BODMIN, are requested to inspect, prior to the action of doing so to the Architect, Mr. F. W. PORTER, 14, Chadd-street, Bedford-square, London, on or before MONDAY, the 6th day of AUGUST next. Lithographed copies of the bill of quantities will be supplied to builders applying for same, on payment of two guineas for each copy, which will be returned to such persons as send in Tenders upon and according to the form of tender, which will be furnished with the quantities.

No pledge will be given as to the acceptance of the lowest or any tender.

E. COODE, Clerk of the Peace, St. Austell.

July 17, 1855.

UPPER THAMES-STREET, and BREAD-STREET-HILL.—BUILDING LAND TO BE LET, with TWO FRONTAGES [illegible] will be continued towards the building by the fresh Pier.—The Joint Estate Committee of Saint Giles-Without, Cripplegate, and Saint Luke, Middlesex, will meet at the QUEST House, in the Parish-church of Saint Giles, Cripplegate, on MONDAY, the 13th day of AUGUST next, at TWELVE o'clock, to receive TENDERS for taking on lease a PLOT of LAND, on which stood No. 9, Upper Thames-street, in the City of London, having a frontage in that street and in Bread-street-hill. Printed particulars and conditions, with the form of tender, may be had at the office of Mr. A. J. BAYLIS, Solicitor, 24, Redcross-street, City.

TO BUILDERS AND OTHERS.

PERSONS desirous of TENDERING for the several works required to be done in the ERECTION of a VILLA RESIDENCE and OFFICES for Mr. George Poole, to be situated in a field near the Moss Turnpike, on the Congleton-road, Macclesfield, may inspect the drawings and specifications, with conditions of Contract, at my Office, Exchange-street, Macclesfield, on and after the 31st inst. to the 7th day of AUGUST, upon which day tenders must be left at my Office, and addressed to the proprietor, not later than FOUR o'clock, p.m. The quantities have been taken out, and can be had upon application.

Macclesfield, July 26. JAMES STEVENS, Architect.

TO CONTRACTORS

THE Local Board of Health of Newton Heath is prepared to receive TENDERS for SEWERING and PAVING, &c. Holland-street and Albion-street; being Contracts 2 and 3. The drawings may be inspected, and specifications and forms of Tender obtained, on payment of 10s. at the Office of Messrs. TRAPP and HEFFLIS, Civil Engineers, 18, Cooper street, Manchester, on and after 30th inst. Sealed Tenders, addressed to me, the undersigned, and endorsed, "Tender for Works," must be delivered on or before the 10th AUGUST next; and the Local Board will not be bound to accept the lowest Tender.—By order,

S. H. NEEDHAM, Clerk to the Board.

Newton Heath, near Manchester, July 26, 1855.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO BUILDERS

TWO SEMI-DETACHED VILLAS to be ERECTED at Sydenham.—Tenders to build the same will be received at the Office of the Gresham Freehold Land and Building Society, on or before FIVE o'clock, on FRIDAY, the 10th of AUGUST. Specifications and plans may be seen at the Office as above, between the hours of TWO and FIVE o'clock, on and after TUESDAY, the 31st of JULY. The Committee will not be bound to take the lowest, or any Tender.

By order,
FREDERICK DAVIES, Managing Director.

TO BUILDERS

GREENWICH CEMETERY.—The Burial Board for the parish of Greenwich, in the county of Kent, are prepared to receive TENDERS for the ERECTION of TWO MORTUARY CHAPELS, Entrance Lodge, &c. at the new burial ground, near Wellhall-lane, in the liberty of Eltham, Kent; also for enclosing the ground on the north and south sides with oak park fencing, which fencing may be tendered for separately, and made the subject of a separate contract. The plans and specifications may be seen, and further information obtained on and after SATURDAY, the 14th inst. at the office of the Architect, Mr. SAMUEL HEWITT, Montague-close, Southwark. Tenders to be delivered on or before MONDAY, the 30th JULY instant, at FIVE o'clock in the afternoon, at the Clerk's Office, No. 14, Barney-street, Greenwich. The Board do not bind themselves to accept the lowest, or any of the Tenders sent in.

E. W. JAMES, Clerk to the Board.

Greenwich, July 3rd, 1855

Drawings and specification may be seen here, or by application to Mr. CHARLES F. HOWARD, Architect, 3, Bedford-terrace, Clerkenwell, on and after THURSDAY next, the 2nd proximo. The Guardians will not hold themselves bound to accept the lowest or any Tender.

JOHN PARSON, Clerk to the Guardians.

Board-room, City-road, July 26th, 1855.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of FARM BUILDINGS on two farms, called Walkern Park and Walkern Bury, near Stevenage, Herts, may see the plans and specification at or at the White Lion Inn, Stevenage; and at the Offices of Messrs. DENTON and DRAKE, 53, Parliament-street, Westminster, Surveyors to the General Land Drainage and Improvement Company, on and after the 31st day of JULY, 1855. Reference also to be made to CHARLES PALMERT, Esq. Walford, Herts, Agent to the Right Hon. the Earl of Essex.—Tenders to be sent to Messrs. DENTON and DRAKE, on or before the 11th day of AUGUST, 1855.

SMOKE-BURNER:

AN improved means of perfecting Combustion, and thereby destroying Smoke.

This invention is now in operation upon Steam-engine Furnaces, of Cornish and Waggon Boilers, and upon others. It is adapted to other descriptions of Furnace, such as Marine Boilers, Coppers, Cokе-ovens, Bakers' Ovens, Pottеries, Chemical Works, &c. Its effect is acknowledged by Government Inspectors to be amongst the most perfect of the inventions and means of abating the Smoke Nuisance, and in many instances with a diminished consumption of Fuel.

In furnaces, of various construction, to which it has been successfully applied, may be seen in operation at the Cement Works of Messrs. FRANCIS, BRIDGES, & Co. Nine Elms, London.

Address, THE SMOKE BURNING COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized ditto for water; high-pressure locks, &c. Manufacturers of Dr. Arnott's improved ventilator. HULETT and CO. 55, High Holborn.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and CO. 84 and 85, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, counting-house, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, City-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and not rising spring, swing, double-acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59 Greek-street, Soho; or at the Foundry, will be promptly attended to. Every description of small, soft, and Malleable Iron Castings.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accident from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation. To be seen in action at DEFRIES'S Office, 145 Regent-street, London.

HEATING BY HOT WATER

JOHN WEEKS and CO. King's-road, Chelsea, call the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating two buildings containing 1,500 feet in length, at the small expense per day in fuel and labour of 1s 8d. This achievement in heating by hot water is unprecedented

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post. DEANE DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700

GAS COOKING-STOVES, for large or small establishments.—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonia, respecting the Crystal Palace Kitchen, as fitted by DEANE, DRAY, and Co.

8, Rosemount place, Hampstead, March 9th, 1855.

Gentlemen,—I have great pleasure in bearing testimony to the capabilities of your extensive new Gas Cooking Apparatus, being the largest and most complete in use. Suitable for hotels, mansions, club houses, private houses, and the army; having cooked in one day 1,000 fowls, and many cwts. of ham, beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 180 lbs. in nine hours, forty-three minutes, presented by J. Banister, esq. Threadneedle street, to the directors, for the banquet given to the foreign ministers. They have been in full operation for ten months, and are now in as perfect order as when first finished. "I hey have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,
EDWARD HORNE.

Messrs. Deane, Dray, and Co.

MARK BERRY, established 1850, practical ZINC and GALVANIZED IRON WORKER.—My motto is cheapness, durability, workmanship and punctuality. Experienced workmen sent to all parts of the kingdom. Flats, roofs, an. verandahs, covered with zinc and galvanized iron. Pipes, gutters, heads, and all kinds of zinc work. Bath manufacturer. Large size open bath for 2os. 6 feet 3 inches long, 2 feet 6 inches deep, at MARK BERRY'S, White-chapel Works, Whitechapel Church-yard. Orders by post punctually attended to.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO IRONMONGERS AND THE TRADE GENERALLY.

D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on view in every article marked in plain figures. Patentees and manufacturers of the Mercurial Gas Regulator. Complete pattern book and price list, 1s. 6d.—55 and 56, High Holborn.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES
a complete LIST of which
will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

212° MILNER'S HOLDFAST and FIRE-RESISTING SAFES non-conducting and vaporizing with all the improvements, under their Quadruple patents of 1851-54 and 1855 including their Gunpowder Proof Solid Lock and Door without which no safe is secure.
THE STRONGEST, BEST, AND CHEAPEST SAFEGUARDS EXTANT.
MILNER'S PHŒNIX IRON SAFE-WORKS, LIVERPOOL, the most complete and extensive in the world. Show-rooms, 6 and 8, Lord-street, Liverpool. London Depôt, 57a, Moorgate street, City.—Circulars free by post.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Corner-plates, Hinges and Lacquered Case Tube for Picture Rods. Door Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouse, Nos. 11, 12, Charles-street, Hatton-garden, London.

EDWARD RUSSELL, ALMA TUBE WORKS, WALSALL, Manufacturer of Wrought Iron Tubing for Gas, Steam, and Water; Stock, Taps, and Dies, and all kinds of Gas Fittings.

THOMAS EDINGTON, PURCHASER and INSPECTOR of CASTINGS on COMMISSION, 17, GORDON-STREET, Glasgow.

TO ARCHITECTS AND BUILDERS

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any bank, public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Steelh use-lane, Birmingham.

W. FRY and CO. 57 or 35, Great Guildford-street, Southwark.—Hot water, hot air, or steam buildings of every description, heated by any of the above ways at the lowest possible cost, and in the best style. Architects, &c. are solicited. Gentlemen finding their own materials, if preferred. Unexceptionable references can be given.

STUART AND SMITH'S
PATENT GILL AIR WARMER.

TESTIMONIALS.

RICHARD REDGRAVE, Esq. R.A.

"16, Hyde-park Gate, Kensington, February 24, 1854.

"My dear Sir,—The Air Warmer continues to work very satisfactorily in fact with regard to the main body of the house, and during this weather is charming, even in the reading room. Mrs. Redgrave is extremely pleased with it in her domain, and says that she never enjoyed a winter before as she has done this, since the apparatus was fixed.—I remain, my dear Sir, yours sincerely,

"Mr. J. Jobson Smith." "RICHARD REDGRAVE.

JAMES SILK BUCKINGHAM, Esq. late M.P. for Sheffield.

"Stanhope lodge, St John's-wood, London, January 27th, 1855.

"Dear Sirs,—I am happy to be able to report to you most favourably as to the operation of your Patent Gill Air Warmer, which has exceeded the expectations I had formed of it. From a residence of many years in tropical climates, I have always been peculiarly susceptible of cold since my residence in England, and this has increased with increasing years and decreasing strength; I have, therefore, had recourse, from time to time, to various stoves and other modes of warming the hall and passages of my house; but I have never succeeded till now in producing an equal temperature over every part, and having that temperature completely under control, which your Air Warmer so effectually gives me. By its use we are really insensible to those changes of temperature and chills which are ordinarily produced in passing from warm rooms to cold halls and passages, and have the climate of May within doors in the months of December and January. The servants learnt its proper management in a few days without difficulty, and its economy in fuel is as remarkable as the many other good qualities it possesses. Indeed, I cannot speak too highly of it, and shall lose no opportunity of heartily advising its adoption to all who desire to protect themselves against the changes of temperature in their dwellings.—I am, dear Sirs, yours faithfully,

"JAMES SILK BUCKINGHAM.

"To Messrs. Stuart and Smith, Roscoe-place, Sheffield."

M. E. HADFIELD, Esq. Fellow of the Institute of British Architects.

"Sheffield, March 6, 1855.

"My dear Sir,—We have kept the Gill Stove in full operation during the past severe weather, and I have much pleasure in saying the result has been most satisfactory. The temperature of the house has been pleasant and equable, and the atmosphere perfectly free from the disagreeable oppressive odour produced usually by Hot Air Stoves. I can conscientiously recommend the principle to my friends as cheap and effective.—I am, my dear Sir, yours faithfully,

"Mr. J. Jobson Smith, Roscoe-place." "M. E. HADFIELD.

WILLIAM RUTSON, Esq.

"Newby Wake, Thirsk, 13th February, 1855.

"Sirs,—I wish to tell you what promise of comfort as well as of economy I have in the Gill Stove placed in the staircase of my house recently built. In spite of the disadvantages incident to an uninhabited and unfurnished house, with all the doors open into the adjacent rooms, it is keeping up a very genial influence over the temperature even during this severe weather. The manner in which the air is admitted gives perfect control over the combustion; and I find, with coke at 18s. 8d. per ton, the rate at which it has been fired for the last two or three months, is 1d. per hour.

"I am, Sirs, yours truly, "WILLIAM RUTSON.

"Messrs. Stuart and Smith

"P.S. Mr Rutson, on looking again, sees the cost of coke for his Gill Stove, burning nine hours per diem, from 31st October to 9th February, for six days each week, was 3s. 6d. for coke—say about 5d. per day."

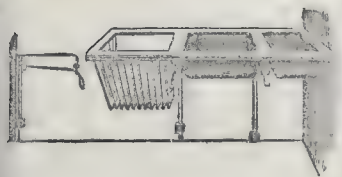
EDWARD MARTIN, Esq. M.R.C.S.

"Sheffield, Glose-op-road, February 27th 1855.

"My dear Sir,—I have now had the Patent Gill Air Warmer in operation during two winters, and the result has been extremely satisfactory. During the late severe frost, the cold air has been so great that I scarcely know how we could have done without it. Instead of the hall, staircase and passages, being a reservoir of cold air, a genial warmth has been everywhere diffused; and when recovering from colds, my children have had the general run of the house so much to the fear of a relapse. To many invalids the invention will prove invaluable, giving them the freedom of their habitation instead of confining them prisoners to one apartment.—Believe me, my dear Sir, very truly yours, "EDWARD MARTIN.

"Mr. Jobson Smith."

E. F. SANDERSON, Esq.



"West street, Sheffield, 27th March, 1855

"Gentlemen, The Gill Air Warmer you put up for me last year at Endcliff, and which I regarded with some distrust and doubt, has been thoroughly tested during the past unusually cold winter. Having been accustomed to a dry climate, my family has been painfully sensitive of the damp and chilly air of this country, but by the happy effects of your Air Warmer this house has been kept at a most agreeable temperature by a continued ventilation of pure, warm, fresh air. This excellent apparatus must be invaluable to invalids and delicate persons. I most cordially offer my testimony in approbation of your effective plan of rendering dwelling houses equally comfortable in point of temperature.—I am, yours very truly,

"Messrs. Stuart and Smith, Roscoe-place." "E. F. SANDERSON.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention secured by patent, which includes an entirely new method of attaching the latter all and each, giving to the horse greater free loom, and being noiseless in operation, all much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

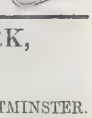
are constructed in the best possible manner, both as to form and utility, are clearly in appearance, durable, and imperrious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.



IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is formed that the Trap plate will pass any matter the top grating will let through, and therefore is not liable to stoppages and well adapted to Stables and Stable yards, for saving the best part of Liquid Manure.

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen, and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

Many roofs covered with zinc thirty-five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, &c.

THE following are the PRESENT PRICES of PATENT SASH LINE:—

No. 3	4	5	6
5s. 3d.	6s. 6d.	8s.	9s. 9d. per gross.

At JOHN YOUNGS, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Blandford-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. &c. &c. each.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

No. 1051, Class 6, Section 15, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and Co are now manufacturing their celebrated American and English Locks, on the premises 97, Cheapside, and 33, Lawrence-lane, London; where, by the introduction of their patent steam machinery, they are enabled to guarantee superior workmanship, combined with greater security, at a moderate price, than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, is warranted, and bears their OWN STAMP, without which none are genuine.

These Locks can be procured by order through any respectable Ironmonger in the United Kingdom; or at the Warehouse, as above Wholesale and Retail.

PATENT FIRE and BURGLAR-PROOF SAFES (MILNERS PATENT), fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the strongest Safeguards against Fire and Robbery; they are made of various dimensions, adapted for the security of Money, Plate, and important Documents, Parish Registers, &c. Lists of prices and dimensions can be had on application to HOBBS, ASHLEY, and Co. Wholesale and Retail Warehouses, 97, Cheapside, and 33, Lawrence lane, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North Western Railway Company,

"Liverpool, May 17, 1855.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron safe and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"6, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thieves tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

LIGHTNING CONDUCTORS.—

R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors with the point and all staples complete for Rods, at one shilling the foot.

R. S. NEWALL and CO's Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world

OFFICES.—Gateshead-on-Tyne.

166, Strand, London.

67, Hyde-park-street, Glasgow.

27, Dale-street, Manchester.

BARTON'S PATENT SAFETY STABLE FITTINGS, and ENAMELLED MANGERS.

THIS IS THE ORIGINAL PATENT

which secures all the recent improvements in Stable fittings, including a method of removing all others for converting the straight and bad fastenings to the back of the stall, to prevent the horse being cast in the stall.

Stable Fittings of every description, enamelled or galvanized. All kinds of Stable Furniture in stock; Iron Hurdles, Gates, Fencing, &c. &c. Manufacturer of Kite's Patent Noiseless Cast-Iron Smoke Cowls. Chimney Cans.—200 on Buckingham-palace.—Price Lists sent on receipt of two postage-stamps.

JAMES BARTON, Iron Founder, &c. 370, Oxford-street, a few doors East of the Pantheon.

ESTABLISHED 1817.

WILLIAM HARMER'S Smiths' Works, Stove and Range Manufactory, and Ironmongery, Metal, and Zinc Warehouse, 19, Horseferry-road, and 1, New Peterstreet, Westminster.—Contractors, Builders, &c supplied with General Ironmongery at the lowest wholesale prices.

Cottage Ranges, with oven or boiler, complete, 22s. each.
Self-acting ditto, with ditto, from 25s.
Self-acting Oven and Boiler Ranges, with wrought fittings, &c. complete, from 42s. each.
Register Stoves, from 5d. per inch.
Elliptic ditto, with double backs, from 3½d. per inch.

Cast-iron Rain-pipe	2 inch.	3 inch.	4 inch.	5 inch.
O G Gutters	3d.	4d.	5d.	6d. per yard.
Best Cut Class and Rose	1s. 1d.	1s. 3d.	1s. 5d.	1s. 6d. per yard.
	1s. 4d.	1s. 6d.	1s. 8d.	2 inch and larger.

4-inch Best Cut Lath, 35s. 6d. per cwt.
Sheet Floor Brads, 13s. 6d. per cwt.
Hoop Floor Brads, 13s. per cwt.

Sash Weights, 7s. 6d. per cwt.; 3-inch Air Bricks, 3s. 6d. per doz.; 6-inch Sink Traps, 9s. per doz.; strong Coal Plates, with hooks, 20s. per doz. Sheet Zinc, Perforated Zinc and Tubing. Estimates given for Iron Railing, Gates, Balconies, and Ironwork of every description.

IRONMONGERY.

PFEIL AND STEDALL.

THE LARGEST STOCK AT

THE LOWEST PRICE,

5 AND 6, BROAD-STREET, BLOOMSBURY.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees', Messrs. POWIS & JAMES, and Co.'s Wholesale Builders and Cabinet Makers, Ironmongery Establishment, 26, Watling-street, City, and see in action this very simple, powerful, and economical machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the King's-road, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished companies and contractors in the world with their Machines for home and foreign use

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.
A great variety of Elliptic, Register, and other Stoves, Cottage and best Ranges fitted, always in Stock.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler.

20	23	24	26-inch.
28s.	30s.	32s.	34s.

Best-cut self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars.

34	36	38	42-inch.
54s.	56s.	58s.	60s.

Strong Elliptic Stoves, with Extra Back and Solid Bars, per in. 2½d.

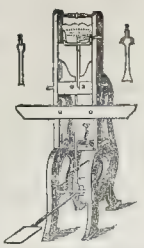
Register Stoves, with Solid Bars per inch, 5d.
Improved New Pattern Circular Check Register, with strong Bars and Trivets, 5d. per inch.
Best Solar ditto, with Fire Brick Back, per inch, 10d.
Bright Stoves, with Two Fires, 40s. to 100s. each.

Cast Rain-water Pipe	2	2½	3 inch.
	1½d.	1s. 2d.	1s. 4d. per yard.

Cast Gutters—4 inch. 9d. per yard.				4½ inch.
O G Gutters	1s. 1d.	1s. 3d.	1s. 5	1s. 6d. per yard.
Patent Line	4d.	5d.	7d.	9d. 1s. per knot.

6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Lenght Elliptic and Register Metal, 14s. per cwt.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.



CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Candlesticks, Fenders, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.
BAKER'S OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,
63, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.
A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.
GLOVERS' IRONWORKS,
163, DRURY-LANE, and CHARLES-STREET.

IRON FOUNDRY,
HARROW-STREET, LANT-STREET, SOUTHWARK.
W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Newel and Railing Bars, Panels, Iron Coping, Hot Plates, Tank Plates, Area Gratings, Sash Weights, Fly and other Wheels, Rigers, Pinions, Engine and Lathe Castings, Forge Backs, Furnace Bars, Kilns, Pans, and other castings, to patterns or drawings.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

MORTISING MACHINE.
12l. to 15l.

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are in daily use all over the kingdom, and references to any extent can be given to prove it really is what it is represented, viz the most valuable tool ever offered to the trade.

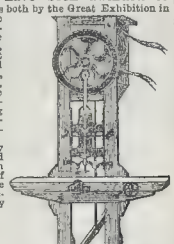
Amongst testimonials of the highest character, he would respectfully invite attention to the following:—

"Rugby, June 14, 1855

"Dear Sir,—In reply to your inquiry respecting the Patent Mortising Machine I purchased from you THREE YEARS AGO, I have to inform you I consider it a most SIMPLE, EXCELLENT, and DURABLE ARTICLE; nor do I think it saying more than it deserves when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be unexcelled in its principle and make, is totally deceived myself and all others, as it is always breaking, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I candidly assert that its use in my shop is of GREAT VALUE, as it must, indeed, be to every builder who possesses it.

"I am, Sir, yours faithfully,
"JOHN PARNELL."

London Agents: Messrs. PUGH and CO. 13, King-street, Snowhill, who keep Stock of all Kimberley's Patent Cords, Flooring Cramps, &c.



HART AND SON,
IRONMONGERS AND MANUFACTURERS,
53, 54, 55, & 57, WYCH-STREET, STRAND.

CORONAS, SCONCES, GAS BRACKETS, &c.
An Illustrated Catalogue on receipt of four postage-stamps.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines both by the Great Exhibition in London, and many scientific Institutions. They are extensively used throughout the United Kingdom by joiners, contractors, couch and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

POWER MORTISING MACHINE.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by
WILLIAM FURNESS,
Atlantic, No. 30, Lawton-street, Liverpool, from whom full particulars may be obtained.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE,
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 2l. 8s.; 4 ft., 2l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 65s. per cwt.

Best Patent Sash Line.					
1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

CHURCH FITTINGS.—TO BE SOLD, a CHURCH GALLERY, nearly new, 21 feet 9 inches by 14 feet, fitted up with substantial seats, and space for organ. Also a quantity of old Oak Church Fittings.—Apply to G. CLARK, Wooton Warren, near Henley-in-Arden, Warwickshire.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of buyers to the following greatly reduced prices:—

Fine Planks, 12 ft. 3 in. by 11 in.	from 3s. 6d.	each.

Prepared Flooring, Veneers, &c. at equally low prices. A list forwarded on application.
Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

A CORN TIMBER WHARF.—At RICHARD MAY'S extensive Waterside Premises and Saw-mill, Canal Bridge, Old Kent-road, builders and others can be supplied with all kinds of FOREIGN TIMBER; planks, deals, and battens on sale, direct from the importers; prepared floorboards, mouldings, pine and cut deals, slating battens, laths, English oak plank, and sash stills, at reduced prices for cash. The Monthly Price Current forwarded on application.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ½ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Stills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

TO BUILDERS, CONTRACTORS, AND CONSUMERS OF ASH TIMBER.

FOR SALE, a large quantity of FIR POLES (Larch), suitable for railway fencing; about fifty loads of English Oak Timber, cut in spring 1854; a quantity of Oak Scantling (dry); also 100 loads of good Ash Timber, and 30,000 good kiln-burnt Bricks, all lying within two miles of a station on the London and Brighton Railway.—For particulars and prices apply, post-paid, to MR. JOHN PUTTOCK, Horsham, Sussex.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth. The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

UNIVERSAL MOULDING-MILLS, 24, Portobello-road, Notting-hill.
WILLIAM LEE, having commenced business at the above Premises as Moulding Manufacturer, with the latest improvement in machinery by C. Chambers, begs to offer to the Public, Architects, &c. his new and fashionable designs for Architraves and Skirting Mouldings, of which only a trial is required to gain their patronage and support. Also, that all goods manufactured by the said W. L. are of the best seasoned timber, and at such a price and quality as not to be surpassed by any other house in the trade. N.B. All customers having an account at the above establishment can be supplied with mouldings to their own design, at the shortest notice, free of any extra charge.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced for the money. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 30, North Wharf-road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

OAK VARNISH, 8s. 6d. per Gallon, in quantities not less than two gallons, delivered at my own door, for cash only. C. LEFTWICH'S Lead, Glass, and Colour Warehouse, 91, Munster-street, Regent's-park.—A large quantity of PAPER-HANGINGS, CHEAP. 10s. per cwt. given for old lead.

STEPHENS'S STAINS for WOOD.
Testimonial to the value of:—
"Northgate, Colchester, February 5, 1855.
"Sir,—I have just finished a new church with your oak stain, and I consider it the best adapted for the purpose, being the nearest approach to the real wood of any I have ever used.
"I am, sir, your obedient servant,
"SAMUEL GIMMES, Builder.
"To Mr. Hy. Stephens, 54, Stamford-street, London"

STAINING DEAL TO IMITATE ALL KINDS of WOODS, it requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 41, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

NOTICE to BUILDERS, CARPENTERS, CABINET-MAKERS, and OTHERS.—FRENCH POLISHING is done, in a workmanlike manner, and at very moderate prices, by C. GREEN, 16, Broadwall, Stamford-street, Blackfriars-road. Established twelve years. Work taken by measurement or contract. Hand rails or shop-fronts, 2d per foot run, done for any part of London; no extra charge. Orders per post receive the most prompt attention.

ST. PANCRAS SAWING, PLANING, and MOULDING MILLS, Cambridge-street, near the Great Northern Railway Station, King's-cross.
GEORGE NOKES and CO. (late Archbutt and Atkinson) beg to acquaint architects, builders, carpenters, and others, that they have opened the above premises with superior machinery for manufacturing architrave mouldings of any size and design, sash bars, match-boarding, skirtings, flooring, &c. and have always on hand a large stock of seasoned flooring at reduced prices; also, timber, deals, sash stiles, mahogany waiteout, &c. Goods sawn at the mills fetched and delivered free of charge.
May 19, 1855.

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Matresses, Brushes, Netting, &c are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations. T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate-hill, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, was manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only description of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and FURROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS UNNECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

JAMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

Sole Manufacturers of Lockhead's Patent Perforated Glass for Ventilation.

*** *Hartley and Co.'s Glass Tariff Newspaper will be forwarded gratis, on application.*

January 1, 1855.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, classic or simple, Gothic, Elizabethan, Pendentive or flat, Louis XIV in much variety, and to any degree of cost; Italian and Greek, Renaissance, and many modified characters, executed for the first houses and from designs of architects of the highest eminence; wall dressings, pain panels of every period, rich Elizabethan and Gothic Dados, in many designs. Door-caps, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the traced from each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent, as furniture, glass frames, tables, window cornices, screens, candelabra, and the whole range of accompaniments to reception rooms of the first class as well as more subdued.

The facilities and repeated enlargement of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

By order of the Council,

JOHN NORTON, Secretary.

The Builder.

VOL. XIII.—No. 651.

IF every house in London were ticketted with its history, how pleasant and instructive our walks amongst them would be!

Some time ago reference was made in these columns to the exceedingly salubrious character borne by the district of the "squares," as evidenced by the uniformly low rate of mortality during the most trying and pestilential seasons. To make quite clear the precise quarter of the metropolis in question, it may, in schoolboy fashion, be described as that part of London bounded on the north by the New-road, on the east by Gray's-inn-lane, on the west by Tottenham-court-road, and on the south by Holborn and New Oxford-street. These are the extreme boundaries of that portion of the town which includes within its area a greater number of commodious dwellings around open spaces than can be met with in any other spot of similar dimensions within the scope of the Registrar General's functions. When we remember that this was until no very distant date *a* if not *the* patrician part of London, it is not surprising that the associations which cluster around it, from the memory of great and eminent men, are as abundant and interesting as its claims to be still considered one of the most convenient and sanitary divisions of the modern Babel are well founded. Within these few acres of ground there have been "births, marriages, and deaths," not a few, recorded of names which are now "household words." Dipping into Mr. Cunningham's "Handbook," Mr. Weale's "London," Mr. Timbs's "Curiosities," Mr. Knight's "London," with other authorities, we have drawn together, into one focus, part of what they have to tell about the old inhabitants of these "squares," and have further jotted down some few notes made the other day during a stroll in the locality.

Russell-square, the largest and most lordly, dates about 1804. Here, in No. 21, Romily died by his own hand; Sir Thomas Lawrence lived for a quarter of a century in No. 65; Lord Chief-Justice Tenterden died in No. 28; and Baltimore House, at the corner of Guildford-street, was long the residence of Wedderburne, Lord Chancellor Loughborough. This square has had a fair share of judicial occupants, for, in addition to those names quoted, the lamented Guildford was a resident (at No. 67) within its bounds. Concerning the residence of Sir Thomas Lawrence, there is a note in the *Gentleman's Magazine*, by the Rev. John Mitford, which says, "We shall never forget the Cossacks, mounted on their small white horses, with their long spears grounded, standing sentinels at the door of this great painter, whilst he was taking the portrait of their general, Platoff" (1818). Russell-square is built on the site of the gardens of the ancient town mansion of the Dukes of Bedford: it is one of the largest in the metropolis. The houses are of brick, with the lower part in some cases cemented. Something of architectural character is given to a block on the west side, between Montague-place and Keppel-street, but the majority are better inside than out. The pedestal for the statue of Francis, Duke of Bedford," set up in the inclosure here, in 1809, has groups in high relief, bulls' heads at the angles, with other agricultural symbols, and is altogether more satisfactory than many others. The statue itself looks very sooty.

The size of this square is very considerable,—no less than 665 feet from north to south, and 670 feet from east to west.

At the north-east corner of Upper Montague-street was "The Field of Forty Footsteps,"—so called from a doubtful story of a conflict there between two brothers, at the time of the Duke of Monmouth's rebellion, on account of a lady (of course), who sat by while they destroyed each other. The grass never grew, it is said, over the forty footsteps they had imprinted on the ground. The alliterative title is attached to a novel and a drama.

The site of Guildford-street, says Malcolm, was formerly a path, which led from Gray's-inn-lane by the Foundling Hospital, the gardens of Great Ormond-street, the back of Queen-square, to Baltimore House (afterwards inhabited by the Duke of Bolton and the Earl of Roslyn); and was generally bounded by stagnant waters, at least 12 feet lower than the square!

Bedford-square was the scene of the curious interview between Lord Chancellor Eldon (who resided in No. 6), and the Prince Regent, afterwards George IV. The story is thus told. The prince came alone to the Chancellor's house, and upon the servant opening the door, observed that as the Chancellor had the gout, he knew he must be at home, and therefore desired to be shown up to the room where he was. The servant said his master was too ill to be seen, and that he had positive orders to show in *no one*. The prince then asked to be shown the staircase, which he immediately ascended, and pointed first to one door then to another, asking, "Is that your master's room?" The servant answered no, until he came to the right one, upon which he opened the door, seated himself by the Chancellor's bedside, and asked him to appoint his friend Jekyll, the great wit, to the vacant office of Master in Chancery. The Chancellor refused—there could not be a more unfit appointment. It was a round man for a square hole. The prince, perceiving the humour of the Chancellor, and that he was firm in his determination not to appoint him, threw himself back in his chair, and exclaimed, "How do I pity Lady Eldon!" "Good God," said the Chancellor, "what is the matter?" "Oh, nothing," answered the prince, "except that she will never see you again, for here I remain until you promise to make Jekyll a Master in Chancery." Jekyll of course obtained the appointment. This square stands on a portion of the Bedford estate, in a wretched district, formerly called St. Giles's Ruins. The centre houses are embellished with attached porticoes of Ionic pilasters and pediments: those on the east and west sides have four pilasters, and those on the north and south have five—one directly in the centre, under the pediment. The curb-roof and garret windows are seen peeping out behind the pediment, to demonstrate its absurdity. The key-stone over the entrance doorway of some of the houses displays a very fine male head. The square was built between 1800 and 1806.

Tavistock House, in Tavistock-square, now, we believe, the residence of Mr. Charles Dickens, was formerly that of Mr. James Perry, editor of the *Morning Chronicle*, during the great days of that celebrated Whig paper.

Close to that last named, stands a house which, in the language of Sir John Herschel, "can never cease to be an object of interest to astronomers of future generations." In No. 37, Tavistock-place, lived Francis Baily, president of the Royal Astronomical Society from 1825 to 1844. The house stands isolated in a garden, so as to be free from any material tremor from passing carriages. A small observatory was constructed in the upper part. In this building the earth was weighed, and its bulk and figure calculated, the standard measure of the British nation perpetuated, and the pendulum experiments rescued from their chief source of inaccurracy.

At No. 9, in Tavistock-place, dwelt John Pinkerton, the historian: here his depraved mode of life was the cause of continual quarrels with abandoned women. Mary Anne Clarke, while mistress of the Duke of York, lived for a long time at No. 31. The next house was subsequently occupied by Galt, the novelist, and Douce, the antiquary. Mr. Britton, himself an inhabitant of this quarter, gives, in his interesting "Autobiography," now in progress, particulars of many of the occupants. Burton-street and Burton-crescent preserve the name of the builder who may be regarded as the creator of all this district, James Burton. We are tempted to quote Mr. Britton's notice of him:—

"The career of Mr. Burton was like that of many other ardent and speculating persons. In his first undertaking of building Russell-square, Bedford-place, Upper Bedford-place, &c. he was eminently successful, and might have retired from the working world with a handsome fortune; but he was tempted to embark in further speculations by engaging to cover a large tract of ground belonging to the Skinners' Company: this proved a failure, and he sustained serious losses. During this time he became connected with John Nash, the sycophant architect and companion of the Prince Regent and after King. That architect, like Mr. Burton, was an active speculating man, and amongst other plans for the improvement of London, his designs for Regent-street, the Regent's-park, St. James's-park, and Buckingham-Palace, were accepted and acted upon. Mr. Burton was intimately connected with Mr. Nash in carrying into effect much of the New-street, and also the Regent's-park; in the latter of which he built a handsome villa for himself, where he resided some years. At a previous time he embarked in gunpowder works, in Kent, and built a country-seat near Tunbridge. Soon afterwards he ventured on the perilous task of building and forming the new town of St. Leonard's; to convey occupants to which he established coaches to run between that place and the metropolis. These were hazardous and losing schemes, and the very worthy but daring builder was, consequently, involved in ruin. Amongst a large family, his son *Decimus* has been eminently and deservedly successful as an architect, and has designed many handsome buildings in London and different parts of the country. Amongst these are the Colosseum, and Cornwall-terrace, in the Regent's-park, the lodges and gate-ways in Hyde-park and the Green-park."

Bloomsbury-square owes its origin to the Earl of Southampton, the father of the virtuous Lady Rachel Russell. Evelyn has this note,—"9th Feb. 1665: Dined at my Lord Treasurer's, the Earle of Southampton, in Blomesbury, where he was building a noble square or piazza, a little towne: his owne house stands too low, some noble roomes, a pretty cedar chappell, a naked garden to the north, but good aire." This site formerly constituted the manor of Lomesbury, in which, according to Hughson, the kings of England anciently had their stables until removed to the Mews, near Charing-cross. Coming into the hands of the Russell family, by marriage with the Earl of Southampton, it was called first Southampton-square, and then Bloomsbury-square. Bedford-house, which occupied the north side, and wherein Lady Rachel Russell resided until her death, has been ascribed to Inigo Jones, but it would seem erroneously. It was built a few years after his death. Thornhill's copies of Raffaelle's Cartoons were in one of the wings of this house. It was sold by auction in the year 1800, and immediately pulled down.

Pope alludes to this once fashionable quarter of the town:—

"In Palace-yard, at nine, you'll find me there,
At ten, for certain, sir, in Bloomsbury-square."

The Earl of Chesterfield, the editor of "De Grammont's Memoirs," died here in 1713; Richard Baxter's wife in 1681. Sir Hans Sloane, Dr. Akenside, and the elder Mr. Disraeli resided in this square. The latter compiled the "Curiosities of Literature" in No. 6, which house was built in 1766, by Isaac Ware, the editor of "Palladio," originally a chimney-sweep, and whose skin, it is said, was so engrained with soot, that he bore till his dying day the marks of his early profession. The great Lord Mansfield also lived here, and his house and library were destroyed by fire in the riots of 1780, he and Lady Mansfield narrowly escaping by a back door from the hands of the mob. This square has a statue of Charles James Fox, seated, which was put up in 1816, and may be looked at with pleasure.

Torrington-square (No. 55) is note-worthy, as the residence of the late distinguished antiquary and genealogist—Sir Harris Nicolas, the editor of Nelson's Despatches and Letters. He died at Boulogne in 1848. Peter Pindar (Dr. Wolcot) died in a house attached to Montgomery's nursery gardens, now the site of Euston-square. Regent's-square, often heard the "unknown tongues" in the large Gothic building, erected for Edward Irving, and now well known as the Scotch Church, of which Dr. James Hamilton is the minister.

Gordon-square is noticeable for its churches and schools. Ground yet remains here, on the west side, to be built on.

Brunswick-square (the house-fronts are brick walls with holes in them, as in the majority of those we have already spoken of), is blocked up on the east side by the Foundling Hospital, which forms, on the other hand, the west boundary of Mecklenburg-square. The east side of the latter is architectural, and the inclosure contains some very fine trees.

Queen-square was so called out of compliment to Queen Anne, in whose reign it was erected. Alderman Barber, the printer, who died here in 1741, was the individual to whom Butler owes a monument in Poet's Corner. Jonathan Richardson, and his son, of the same name, both died in Queen-square.

Dr. John Campbell, author of the "Lives of the Admirals," and editor of the "Biographia Britannica," had a large house at the north-west corner. On Sunday evenings it was a great resort as a *conversazione* for persons of eminence in science and literature. Boswell has this note on these assemblies. "*Johnson:* I used to go pretty often to Campbell's on a Sunday evening, till I began to consider that the shoals of Scotchmen who flocked about him might probably say, when anything of mine was well done, 'Ay, ay, he has learnt this of *Cawmell.*'"

In Dodsley's "Environs," it is said that the north side of this square was left open for the sake of the beautiful landscape formed by the hills of Highgate and Hampstead, together with the adjacent fields!

Red Lion-square was built about 1698, and so called of the "Red Lion Inn," long the largest and best frequented in Holborn. The bodies of Oliver Cromwell, Ireton, and Bradshaw were carried from Westminster-abbey to the Red Lion, in Holborn, and next day were dragged thence on sledges to Tyburn. In 1733, Lord Chief Justice Raymond lived in this square. Sharon Turner, the historian, was also an occupant. The benevolent Jonas Hanway, the traveller, lived and died (1786) in a house in Red Lion-square; the principal rooms of which he decorated with paintings and emblematical devices, "in a style," says his biographer "peculiar to himself. I found," he used to say, when speaking of these ornaments, "that my countrymen and women were not *au fait* in the art of conversation; and that instead of recurring to their cards, when the discourse began to flag, the minutes between the time of assembling and the placing of the card-tables, are spent in an irksome suspense. To relieve this vacuum in social intercourse, and prevent cards from engrossing the whole of my visitors' minds, I have presented them with objects the most attractive I could imagine,—and when that fails there are the cards." Hanway was the first man who ventured to walk the streets of London with an umbrella over his head. After carrying one nearly thirty years, he saw them come into general use.

Sir John Prestwick, in his "Republica," tells us "That Cromwell's remains were privately interred in a small paddock near Holborn, on the spot where the obelisk in Red Lion-square lately stood." Can any one fond of notes and queries say what authority Prestwick had for such a statement, or whether it is a mere blunder caused by the incident we have above mentioned? The author of "A Tour through Great Britain" says:—"This present year, 1737, an Act was passed for beautifying Red Lyon-square, which had run much to decay, and no doubt but Leicester-fields and Golden-square will soon follow these good examples." Though Red Lion-square has at this time a decayed lodgings-to-let aspect, there is a picturesqueness and a touch of sentiment about it not to be found in those we have passed through of higher grade. The variety in the houses, dilapidated and disfigured as some of them are, is more interesting than the even respectability of continuous brick walls and unbroken roofs. Here we find the Needlewomen's Institution, and the Female Aid Society; and in after times No. 31, the Working Men's College, will be pointed out as the scene of the voluntary labours of a number of men known to fame, who desired to aid in the mental development of their fellows.

ON WROUGHT-IRON WORK.*

GLASS painting and the work of the mosaicist as applied to the manufacture of pavements are not the only arts the golden epoch of the Middle Ages may appropriate to itself for grandeur of style and refinement of execution. The art of wrought-iron work yields in nothing to these. Take, for example, the remains of those beautiful metal screens, or grilles, which once enclosed the choirs, the chapels, and the shrines in the cathedrals and churches of this and other Christian lands; or, some of those equally fine and masterly productions of the skill and energy of the smith which in France may still be pointed out in the wonderfully-executed hinges to the western portals of Notre Dame, in Paris; and, again, in England, although perhaps in works of less pretensions, in the metal work to the door of the hall of Merton College, Oxford; in that to the doorway of the chapel of St. John, within the precincts of the cathedral of Norwich; and, indeed, in that multitude of examples which have still been preserved to us throughout the length and breadth of this land in our churches and other Mediæval buildings. In all of these, and in every specimen, I say, of the like kind, is the same power of design, the same taste and energy of execution to be found as in the other before-mentioned contemporary arts, viz. those of glass-painting and mosaic work.

I use the expression contemporary arts to these—and I do so emphatically,—because to the twelfth and thirteenth centuries belong also the finest productions of the craft of the blacksmith; to an epoch, indeed, wherein it may be said every artistic effort bore the impress of unity. The craft of the blacksmith is, in my opinion, a truly noble and manly one. How our sympathies become enlisted by the many pleasing and mysterious legends attached to it! To obtain his bride one of the chief of blacksmiths, Quintin Matsys, forsook his craft, only to become a greater painter; and Bescomette, eager of celebrity, is said to have bartered his soul to attain a deeper insight into the mysteries of forging.

The manufacture of wrought iron in connection with art workmanship is a subject perhaps of greater extent and importance than any other that can well be brought before the notice of the public at the present day. It is an art which, unfortunately, in recent times, has been almost entirely superseded by the more rapid, and perhaps inexpensive method of casting. To vindicate the claims of wrought-iron work as a branch of the fine arts, to rescue it from the false and base attempts to reproduce forms which are inherent only to it, by the process of casting, and to endeavour to quicken an appreciation of its beauty and merits into a desire to make it applicable where hitherto its illegitimate rival has alone been encouraged, are necessarily some of the principal objects to be attained by observations like the present.

I therefore propose to confine myself, on the present occasion, to metal screens or grilles; to tell you something of their use and position in churches and other buildings, of the variety and character of their design and composition, of the manner and various processes by which they were manufactured, and lastly, of the few rules which appear to me were followed in designing and executing them, with a view to helping ourselves to the manufacture of new ones.

First, then, as to the use and position of metal screens or grilles. * * *

As to the design and composition of these screens, I may remark that it is very rare to find forms of a pronounced architectural character in early works of this kind; that is to say, forms which are common in architecture, either to wood or stone: the only example in early iron-work that I am aware of,—and even that no earlier than the fourteenth century,—is in the doors to the beautiful screen published by Mr. Digby Wyatt, and belonging to the Rinucini Chapel, in the church of Santa Croce at Florence.

The imitations of purely architectural forms in metal screens belong almost exclusively to the works of the fifteenth and sixteenth centuries, as may be seen in the grille recently restored to its place in Henry V.'s tomb, in Westminster Abbey; the screen enclosing the tomb of Edward IV. in St. George's Chapel, Windsor; and in the numerous examples remaining in Germany and Belgium. Works such as these I have no wish to see reproduced, and I purposely dismiss all comments upon them beyond the few observations necessary to complete the subject.

The most remarkable specimen of those I have mentioned as belonging to the fifteenth century, and in form and composition retaining very much the character of stone-work, is that enclosing the tomb of Edward IV.; but before entering upon a description of it, let me observe that the next great work of the kind that followed was the screen to the tomb of his son-in-law, Henry VII. in Westminster. This last is what may be also termed a purely architectural specimen, but it is not executed in wrought iron,—it is cast in brass,—indeed, it appears to me that the art of working in wrought iron declined in the same degree as architecture and the other arts towards the close of the fifteenth century. An attempt had before been made to execute all the complicated details of Perpendicular and Flamboyant architecture in wrought metal, till the early and simple principles of that noble art became involved in the greatest complexity; and the artist, despairing to realise his design without prodigious cost and labour, sought for a solution of his difficulty in the easier process of casting. The magnificent grille of brass surrounding the tomb of Henry VII. was, I consider, the knell of death to the ancient and honourable craft of the blacksmith.

* * * * *

The inference I wish to draw from the above observations is this, viz.;—that it is not legitimate in works of wrought iron to use forms or details peculiar to stone or wood carving; that if a design, to be executed in metal, from accidental or other causes, approaches in character to any such works, then the bronzist or caster in brass must be applied to, not the blacksmith. To execute such a work in wrought iron, irre

* From a lecture delivered at the Architectural Museum, July 2nd, 1855.

pective of the costliness and difficulty, is, in act, a violation of the art, and an excuse to ubstitute cast for wrought iron.

I believe, if we want examples of what are eally true specimens of the art workmanship of he blacksmith, these are only to be found in he simple forms and constructions of the twelfth nd thirteenth centuries, not in the elaborated nd architectural ones of the fifteenth and six- eenth.

Another example I have already alluded to as elonging to the fifteenth century, and of archi- ectural character, is that to the tomb of Henry V. at Westminster. The filling-in is very ebased, clumsy, and complex in execution, and nsatisfactory when compared with the exces- ive beauty of its neighbour, the beautiful rille to Queen Eleanor's tomb.

We learn from the Fœdera that one Roger ohnson, of London, was the smith employed o do the work to the grille of Henry the ifth's tomb, and that he was empowered to mpress workmen for this purpose. It appears hat as late as when Neale's "Westminster" as written, there were remains of the colours hich were used to throw up the little embossed ilt *fleur-de-lis*, the lions, antelopes, and swans ttached to the great horizontal and vertical ars.

I shall dwell no longer upon these produc- ons of the fifteenth century, but proceed to ie works of the fourteenth, mentioning only hat the beautiful screens of brass which were xecuted toward the end of the middle ages, ill form a distinct and most interesting subject r future consideration. As examples of four- eenth century screens, I prefer directing atten- on chiefly to those of Italy. The most beau- ful I am aware of is that from Rinucini hapel, in the church of Santa Croce, at lorence, the doors of which I have ventured condemn. The remaining parts, however, e of the highest order of merit, and the uatrefoil reticulation a most charming com- osition. That which makes these grilles of aly so valuable as specimens is the high rder of finish with which they have been xecuted, and the introduction of a greater egree of ornamentation than is to be found in ontemporary works. One from the Cathedral t Rouen is exceedingly elaborate, and is re- arkable for retaining the conventional orna- ents of the twelfth and thirteenth centuries.

There is also a very good example of a simple ourteenth century grille, from a tomb in alisbury Cathedral. It consists merely of a umber of upright and horizontal bars, halved nd rivetted together, and forming square anels, filled in with pointed pieces of iron, like kind of quatrefoil.

The grilles at the Cathedral of St. Quentin, rance, at Sienna, and Lincoln Cathedral, are l of corresponding date, viz. the thirteenth entury. Of these examples that from Sienna immeasurably the finest, and serves to vindi- te the very high character pointed art sumed in Italy. The examples from St. uentin and Lincoln are excellent types of the anufacture of the grilles of France and ngland. In both countries, although the amples remaining are far more numerous in e former than in our own, a simpler kind of rticle appears to have been manufactured than Italy. Let us take the example from ncoln. This screen is one of a pair which parate the smaller transepts from the choir.

all probability screens of exactly the me design enclosed the sanctuary, and divided from the part now called the Angels' Choir, t which formerly was used for the Lady apel. The kind of reticulation in this screen, d the manner of its application, is very simple d deserves attention. The scrolls of which it composed are of the ordinary conventional pe of ornament used in stone, arabesque paint- s, and the other applications of wrought-iron ork of the twelfth and thirteenth centuries. ey appear to have been formed out of bars of ought iron, one-eighth and one-sixth of an ch thick, by five-eighths of an inch in width. There is no more art and labour required t the formation of them than what an dinary village blacksmith could accomplish the present day. He would require little re than the service of the beak of his anvil, a pair of tongues, and a hammer or two of different sizes; and observe, the curves are not mathematically true, neither were they ever so; nor is it very desirable in wrought-iron work that they should be.

The screen from St. Quentin possesses greater variety in its design and manner of execution. This, too, forms part of the enclosure of the choir of the cathedral. It has the same kind of framing as the one at Lincoln, and there is also much similarity in the pattern and manner of filling in, that is, to the extent of the upper compartment only of that at St. Quentin. The second compartment is filled in with a reticulation of quatrefoils, and the third and lower one formed of panels of solid sheet metal, fastened to rebates forged in the bars of the skeleton framing. All signs in either of the above-mentioned screens of ever having had a *chevaux de frise* are quite gone; still it is not improbable that a strong bar either of wood or iron once ran along the top of them, and to which they were attached.

The framing of the grille at Sienna appears to be the same as those we have already considered; but the Italians were not content with the bare appearance of the skeleton framing, so they sought to enrich it with a wedge-shape moulding, which was rivetted to the framing beneath it; the reticulation of quatrefoils having been previously fixed by a thin strip of metal passed through slits cut in the bars of the framing, and clipping round the quatrefoils. This example was further enriched by the beautiful kind of frieze formed of a foliage pattern. This pattern was first drawn on sheet metal, perhaps about $\frac{1}{16}$ of an inch thick, cut out with a chisel and hammer, and the leaves *repoussées*, that is, beaten into undulations. A flat horizontal bar surmounts this screen, and carries the *chevaux-de-frise* before alluded to.

The construction of these screens is exceedingly simple, and ought not to be very expensive. A few flat iron bars, halved and rivetted together, so as to form a number of panels, is all that is necessary to give them the requisite strength and stability. The reticulations, or fillings-in of the panels, added really nothing to the strength of this framing: they served merely as a protection or guard, in the same way as a succession of upright bars does to a modern iron railing. Still these reticulations admitted of great beauty and variety in their designs.

The grille before mentioned at Lincoln consists merely of a skeleton frame of wrought iron, composed of upright bars, $2\frac{1}{2}$ inches wide by $\frac{3}{4}$ inch thick. These are about 18 inches apart, and halved and rivetted on to a bottom and top rail, flat, and of corresponding thickness to the uprights, the whole forming a succession of panels.

Of the reticulations, those of the scroll pattern are the most numerous. The curves of these scrolls, as I have before mentioned, are not true: a certain angularity may be observed in them, which implies that iron is the material used. The bars out of which they were formed of course varied in size in each specimen: in thickness these bars are from an eighth to a quarter of an inch; in width, from half an inch and upwards. If a bar of the smaller dimensions was used, and a scroll of merely a continuous form required, then, very little tempering of the metal was necessary, and probably the beak of the anvil served alone to form the scroll; but, if it was too complicated in its volute to admit of being so worked, then perhaps a bolster or mould was fixed on the top of the anvil, and the end of the bar which was to form the eye of the scroll attached to the corresponding part of the mould: the iron bar, after being tempered, was beaten round the mould, and so the more complicated kind of scrolls were prepared. If, again, the reticulation was so complicated that several furrings out were required to form the pattern, as in the grille at Rouen, then a greater degree of tempering was necessary, and, what are termed the furrings out effected by beating out the bar: the file was applied in such cases to finish off the parts so beaten out.

Ornaments, such as leaves and rosettes, were produced by the means of a stamp, also used while the beaten out parts of the bar were in a highly-tempered state.

The distinction between the simpler and more ornamental kinds of scroll reticulation appears to be that the former can be worked almost without the forge and at the vice or bench; the latter and more ornate only and exclusively at the forge, on account of the many temperings the iron must undergo to produce the furrings out, and the stamping of the rosettes and other ornaments.

To form a reticulation of quatrefoils, the iron bar is again used, each of the four circles beaten into shape on a mould, and then welded together at the points.

Mere surface quatrefoils were cut out of thin sheet metal, as were also other ornaments of a similar nature; and to fix these to the iron framing, a tenon was left on part of them: a hole was then punched into the sides of the iron framing, prized up by a tool called a mandril, the tenon of the filling-in ornament then inserted, and the whole well hammered together, after being subjected to a moderate heat.

The manner of fixing scrolls, quatrefoils, and other ornaments, worked out of iron bars, to the skeleton framing, appears to be chiefly by drilling a long-shaped hole into parts of the bars of which the framing is composed, and passing a thin strip of metal through it, which, clipping round the scroll or other ornament, was twisted by a pair of pliers, and cut off short. To attach one scroll or quatrefoil to another, the same method was adopted. Sometimes these ornaments were rivetted to the skeleton framing, and to one another, as at St. Quentin.

Mouldings, when used, were often stamped out: frequently, however, they were drawn out: to effect this, a tool was made a few inches in length, and one end of it formed in shape to the reverse of the moulding: this tool was then used on a bar of iron, well tempered, and placed on the anvil, and by the application of a hammer, drawn along it until the required form was produced. In modern works these mouldings would be rolled out, as being a much easier process than drawing.

In pointing out the peculiarities in the design and construction of these metal screens of the thirteenth century workmanship, I wish it to be understood that I do not advocate a blind imitation of them in new works of the like character; but I do hold and insist that there is an obligation upon every one studying the works of a past age, that they strive to acquire a right knowledge of the motives, or rather the intention for which such works were composed, and the precise character which was given to the art itself, in reference more particularly to the material in which we find it embodied.

The age which produced works such as those I have here described was unlike our own. No effort was then made to disguise or to deceive; hence every peculiarity they possess is certain of a satisfactory solution, if only a patient investigation be made into it. It was necessary to make a screen, such as, for instance, at St. Quentin; wrought iron was to be the material used; it was to be of a certain construction, to answer to a certain purpose, and it was done; that is to say, it was not only made of wrought iron, but it was made to look like wrought iron,—unmistakeably so, and not one morsel more labour incurred than the nature of the material and the strength of the construction warranted. It is a lamentable fact, at the present day, that we cannot get common things executed in common materials and at common prices. That which any village blacksmith would have produced five hundred years ago, without effort, and comparatively without expense, can now, in this nineteenth century of ours, for the most part only be procured in some expensive emporium for such articles. Again, we want a tile pavement, one of the simplest things I believe ever executed. Well, in our new work we get no really tile pavement: one made after the same fashion as our ordinary paving bricks are made in any common tile or brick yard, but we are forced to go to the potteries for the article, and then what do we get? Certainly no tile pavement, only an imitation of one in porcelain, which, when laid down, is more like crockery-ware than terra-cotta, and at an enormous cost.

This is another example of the impossibility of getting common things executed in common

materials, and at common prices. Then, again, we want a wall decoration, say a picture. Well, we are forced either to have an elaborate work, executed after the most approved Munich frescoes, or no picture at all. The use of ordinary tempera painting is not recognized with us: in fact, it is considered too cheap a medium for an artist to realise his ideas in.

In this country, it is only the intrinsic value of an article that is cared for, and until the skill and ability of the artist rates higher in value than the material does in which he works, he will be forced either to use costly materials to embody his ideas, or to starve.

HENRY CLUTTON.

FUNGOIDAL AND EXCRETAL MATTERS AS EPIDEMICAL CAUSES.

In the *Edinburgh New Philosophical Journal*, for July current,* there is an interesting article by Professor Daubeny, of Oxford, "On the Influence of the lower vegetable Organisms in the Production of epidemic Diseases." It is Dr. Daubeny's opinion that such epidemics as the virulent cholera may owe their origin to microscopic fungi. This hypothesis the writer does not claim as a new one: indeed, it has been occasionally broached by different writers ever since the first visitation of the epidemic or Asiatic cholera to this country; but Dr. Daubeny has further matured the idea, and placed it on a basis which will enable it to hold its place beside other hypotheses, till the true theory of such epidemics be elicited; and we should not be in the least surprised to find that the true theory, so elicited, will turn out to comprise more than one of the hypotheses more or less separately advocated by different minds. Dr. Daubeny has himself, for instance, connected the fungoidal hypothesis, in a very feasible way, with that on which epidemics, such as cholera, have been, more or less, directly and exclusively ascribed to the noxious influence of animal refuse, where concentrated, as in towns; and that both cholera and typhus *are* closely connected with this latter as a cause, can scarcely be now termed a hypothesis; for the reality of such a connection has, in fact, been well ascertained; but still it remains a question how this connection is carried out, and how such refuse really and specially operates to the production of the epidemic; and it may be ultimately found, that the fungoid hypothesis is not only perfectly consistent with the ascertainment of this fact, but necessary to explain the *modus operandi* of such noxious matters as those, too generally, still so closely associated with the aggregates of human dwellings.

All fungi contain azote, or nitrogen: hence their proper pabulum is animal matter in a decomposing state; and hence, although the spores of indigenous fungi must be floating about perpetually in the atmosphere of the places where they abound, they can only fasten themselves on spots where decomposing azotized matter exists, and can be prevented from getting a footing wherever the latter is carefully removed. Moreover, there may be seasons during which, as Liebig suggests, the scavenging "ozone," or electrified and active state of the oxygen of the atmosphere, is deficient, so that the usual palliation or moderation of the evils arising from so malignant a conjunction of causes as that of the fungous *spore* with its fitting *nidus*, may be awanting, and the festering, superabounding *soil*, so suitable to these vegetable *seeds* of evil, be left undiminished, or but slowly to waste, thus affording the requisite conditions for the most luxuriant propagation of the epidemical fungus.† In this way the ozone theory and the electrical theory or hypothesis, which we have more than once brought under notice, may also take their proper and necessary places, side by side with the fungoid and the excretal hypotheses, in enabling us to arrive at a complete and satisfactory solution of the mystery of the deadly epidemics. Although Dr. Daubeny may be right, therefore, in his association of the two latter for this desirable purpose, he may be equally wrong in rejecting, as he does, the close and co-ordinate association of the two former,—or, at least, of the electrical,—with the others towards the same end.

In connection with this rather too interesting subject, we may here remark that Dr. E. H. Greenhow has had reprinted from the Transactions of the Epidemiological Society of London, published in the "Journal of Public Health" for June last, a paper read by him before that society, on "Cholera in Tynemouth, in 1831-2, 1848-9, and 1853." The case of Tynemouth appears to be an instructive one. Towards the close of his paper, the author says: "Judging from the facts detailed in the former portion of this paper, regarding the earlier visitations, it may with considerable probability be inferred that the removal of so many sources of atmospheric impurity, just before the anticipated outbreak, had removed some local conditions favourable, perhaps necessary, to the development of the pestilence in its more malignant form." This one can readily understand, if Dr. Daubeny be right; for the "sources of atmospheric impurity" referred to were doubtless the azotized nidus in which the epidemical fungus would have multiplied,—the stinking nest in which the pestilence would have been hatched,—as in ordinary seasons it would have been the source of that "atmospheric impurity" to which, perhaps, directly, the ordinary forms of endemic disease, such as typhus, scarletina, &c. ought to be attributed, rather than (in their case) indirectly to the propagation of the virulent or epidemical fungi in the rotting matters which yielded the mere "atmospheric impurity" productive of these more ordinary forms of disease.

The moral, as we may term it, of what has been said, then, is, as Dr. Daubeny expresses it, that,—

> "Whilst on the one hand epidemic cholera never breaks out except in spots where human beings are closely congregated, its propagation on the other hand may in general be rendered more or less difficult, in proportion to the care bestowed in removing every kind of decomposing organic matter—all bodies capable of absorbing animal effluvia, such as rags, clothes, dust, &c.—everything, in short, of an azotized nature which can serve as a *nidus* of infection; just as moulds and other fungous growths may be prevented from springing up, by removing all those conditions which experience has shown to be favourable to their growth."

This wholesome and reassuring inference we may even reiterate in the words of one of the final conclusions of Dr. Greenhow's paper, drawn from facts, as Dr. Daubeny's is from reasoning, that,—

> "When cholera is impending, it may either be averted, or at least the visitation be much mitigated, by active measures of a precautionary character; and that probably sound sanitary arrangements, which provided for the complete and rapid removal of all the excretæ and other exuviæ of towns, would so improve their condition as to remove the local sources of atmospheric impurity which appear to favour the development of cholera in a pestilential form."

The authorities in every parish throughout the United Kingdom ought at this moment to be at work.

CONSTRUCTION AS APPLIED TO CIVIC STRUCTURES.

OUR readers are aware that Professor Hosking's two Treatises of 1829-31, "Architecture" and "Building," respectively, of the seventh edition of the Encyclopædia Britannica, have been revised and amended for the eighth edition, so far as was consistent with the fact of the matter being in stereotype plates; and that there is in the eighth edition a supplement to "Architecture" (wholly new) which has been appended. Part of this supplement will be found in our pages. The same able writer has since contributed two new articles, "Construction" and "Drainage," to be further supplementary to "Architecture" and "Building," as one cognate subject; and as the work may not come into the hands of all our readers, we reprint the section of the article on "Construction" as applied to civic structures:"—

"The ignitibility of timber, and the rapidity with which it burns when placed in circumstances so favourable to that effect as by its disposition in an erected building, have led to its prohibition for the purposes of the main inclosures of houses, and buildings generally, in London, and in some of our larger provincial towns. It is possible, however, so to protect timber employed in the inclosures, and for the internal partitions and floors of buildings, as to render mere dwelling-houses practically fireproof. Whilst, however, the liability of timber to take fire and to burn may in a great measure be counteracted, and notwithstanding that this material combines the advantage of economy with security, stone and brick are undoubtedly better adapted for the main structure of a building. Brick or stone, or brick and stone together, with mortar as a setting material, ought to be employed, but in such manner only as to be freed from dependence upon other and less trustworthy materials. The most perfect erections as buildings are those in the composition of which this principle has been understood and fairly practised. If adventitious aid be given to brick or stone walls by foreign materials, the materials ought to be at the least harmless. Iron in bulk is not a proper substance to incorporate with walls, because of its great expansibility by heat; but iron used in thin laminæ, as hoop-iron laid in walls in the bed-joints of the brick or stone, cannot be productive of any bad consequences, whilst it is most beneficial in that form as a tie to the structure.

Bricks come ready shaped to the hands of the workman, in a form the best adapted for the arrangement in the construction of a wall, which, under the designation of bond, gives it such a degree of consistency that a weight placed upon the top is carried by the wall in every part throughout its whole thickness, and throughout a greater or less proportion of the length, according to the height of the wall.*

Stone, on the other hand, comes to the workman without regular form; and with skill on his part to dispose and arrange the materials, good erections may be produced of rubble; for although the thickness of which walls may be built of rubble with safety will depend in a great degree upon the quality of the mortar, much depends also on the skill of the workman in bedding and bonding the stones. Under any circumstances, however, a wall so composed cannot, safely, be charged with heavy weights, nor be exposed to the vibrating action of floors, until the mortar shall have indurated to some extent; whereas a wall of brickwork is secure by the horizontal bedding of the bricks, and by the effect of the transverse bond which the alternation of the header and stretcher almost necessarily produces. Stone, again, may be dressed to any shape, and so as to mould it to every variety of construction with the smallest possible quantity of mortar or cement. From blocks with rough hammer-dressed parallel beds,

* Longman and Co. London, publishers.

† It so happens that while we write, a little volume on "The Philosophy of Reproduction," by Dr. R. J. Mann (Longman and Co. publishers), lies at hand, so as to suggest a reference to it thus briefly, as a good exponent of the wonderful multiplicity with which such organizing organisms (if we may so call them) as these are endowed for the propagation of their species. So far as we can see, this little work does not specially allude to the subject under notice; but its general bearing does, and we have particularly treated and as a whole especially in what relates to animal reproduction, it is well worthy of a perusal by all who desire to dive a little into the mysteries of creation. The text is pretty fully illustrated by instructive woodcuts.

* Bond in brickwork is most conveniently and most effectively formed and maintained by disposing the bricks in their courses either endwise and lengthwise (technically, header and stretcher), alternately brick and brick, or course and course; that is to say, that the bricks in every course should be laid alternately header and stretcher, or that the courses should consist of all headers and all stretchers alternately. The former arrangement—alternate header and stretcher in the same and in every course—is known in this country as Flemish bond; and the latter—alternate courses of header and stretcher—is distinguished by the term English bond. Neat work in face can be produced more easily with Flemish bond, but English bond has the reputation of being the best bond structurally. But why these two arrangements should be distinguished by the names they bear is unknown; at least, it is unknown to the present writer, who supposed, in common with most other people with whom he had conversed upon the subject, that alternate header and stretcher in the same course was the practice in Flanders, and generally in the neighbouring countries on the Continent, whilst the term English bond seemed to imply that the arrangement which bears that designation is peculiar to England. A visit made a few years ago to the countries where Flemish bond ought most to abound, if the name be properly applied, enabled the writer to observe what had never, to his knowledge, been remarked by any person who had published his remarks, and what was quite unknown to every one to whom he has stated, since his return, what he had observed. At Rotterdam and at the Hague, at Antwerp, at Brussels, and at Liège, at Cologne, at Mayence, and at Frankfort, and again throughout the north-eastern parts of France, brick walls are built according to the arrangement distinguished in England as English bond; and Flemish bond is unknown, at least no single example of it fell under the writer's observation in any of the towns and countries indicated, although his attention was called to the subject by the quay-walls at Rotterdam before he set foot on shore.

up to the most complete and perfectly wrought parallelopipeds adapted to any arrangement of bond that may be best adapted to the structure, and with combinations of rudely formed and perfectly formed pieces of stone, walls may be built of stone of greater strength than the best bricks can be made to yield, while stone walls are liable to be inferior in every respect to brick-built walls of ordinary quality.

Some combinations of the two kinds of materials have the effect, however, of making a better wall than could be produced by the main constituent in the form employed alone. A stone-rubble, or pebble-built wall, is greatly improved by one or two bonding courses of brickwork at short intervals; and a brick wall is improved and adapted for a higher purpose by thorough courses, at intervals, of good stone, wrought to bed and joint truly; whilst on the other hand, a wall substantially of stone-rubble or pebble, and faced with brickwork, is essentially an unsound wall; as in like manner a brick wall faced with wrought stone is liable to be weaker than the brickwork would have been without the stone.

With regard to the thicknesses of the walls of buildings, it is generally considered that these should be governed by the height of the structure; but they ought not to be determined by that condition alone. Chimney-breasts, or other buttress-like projections, built up with a wall, and extending to more than the thickness of the wall, make it in fact stronger in its transverse section, and justify less general thickness in the body of the wall, whilst window and other openings in a wall leave piers which ought to be of greater thickness than the mere height would require. But all returns, indeed, whether as chimney-breasts or as cross walls, built and bonded with a wall, tend to render unnecessary the full thickness which the height might require; whilst, as just intimated, the omission of portions of a wall for door and window openings should be compensated for by additional substance to the parts which remain.

Walls subjected to undue action, such as that arising from slight joists tailed into them, or that occasioned by inclined timbers, as under galleries in churches, chapels, and theatres, require to be of greater thickness than they otherwise would; whilst it is quite wonderful to what great heights brick walls may be built with safety, if they are well built, and exposed to no other action than direct vertical weight. When, indeed, such walls stand upon a sufficient foundation, direct vertical weight without motion is a means of security to the walls so long as the weight is reasonably within the power of resistence of the materials to crushing pressure. The object to be looked at, therefore—the walls being honestly built—is, as hereinbefore remarked, to make the weight to be imposed upon any wall act upon its solids vertically and steadily.

Floors upon girders, or framed to strong trimmers—the girders or the trimmer-joists running into and bearing upon the piers or solids of the walls—are far preferable to what are termed single floors, of which each joist runs into the wall. Girders, as the basis of floors, render plates in the walls wholly unnecessary, by depositing the weight in the right places, without requiring plates to carry it on from the weaker to the stronger places; and being of necessity stout and rigid, they form a fair tie and strut to the walls into which their bearing ends are tailed.

Whether girders or trimmer joists be employed for placing the weight of floors upon the walls of a building in the safest manner, the bearing timbers ought to be placed upon pieces of stone as templates built into the walls, and be made to take a cog-hold of the templates, so as to enable them to tie and stay the walls by means of the cogs.*

It is by means of the girder bearing upon the solids of the walls, though with bad carpentry, that the French are able to carry up their soft stone rubble walls to heights that would certainly be unsafe if the walls were seamed with wooden plates, and shaken by floors of single joists;* and it is by means of the solidity given to the floors by the girders, and the solid bearings which the girders obtain, that the floors are able to carry the dead weight of matter which renders them practically fire-proof, as hereinafter described, in addition to the moving weights to which the floors of buildings are necessarily exposed in use.

We can and do frame floors most effectively by carpentry alone; whereas the French do the work so badly, that no important bearing is, or indeed may be, trusted by them to the framed joint—dog-nailed stirrup straps of iron being always brought in aid. But the common practice with us is to use single or unframed floors, which carry the weight and the vibration to which floors are exposed into the walls, over voids as well as over solids; while the French frame their floors to or upon girders, by means of which the floors are brought to bear upon the solids of the walls. The walls are thus not only less exposed to vibratory action, but are both tied together and strutted apart with better effect by the stout girders stiffened by joists, than by joists which themselves require some foreign aid to stiffen them. Moreover, single floors of joists, unless trimmed at frequent intervals, when, indeed, they may be termed half-framed, are supposed to require plates of timber laid along the inside faces of outer walls and upon internal walls. This defect is avoided by our neighbours, who exclude all timber, except the bearing ends of girders, from their walls, and use framed floors.

When the walls of a building have reached their full height, the wall-plate comes into use legitimately—to cope the walls, in fact, and to form a curb as a base upon which to place the roof, which should deposit its weight, nevertheless, by means of its tie-beams upon the plates over the solids of the walls below, and which should, moreover, oversail, so as to cover and effectually shelter from the weather the inclosing walls also.

In setting forth the structural advantages derivable from the use of girders as the bases of floors, it may be necessary to repeat the warning already intimated against the use of girders of a material of uncertain strength and of treacherous character when exposed to transverse strain.

Cast iron is of uncertain strength, mainly because of the imperfections which the most skilful founders, with the best materials and every appliance at command, cannot always avoid, and which are most liable to occur in the production of complex forms in long lengths; whilst careless founding and rapid cooling are contingencies connected with the production of cast-iron girders—which are necessarily long and complex castings. Cast iron is treacherous, inasmuch as it is brittle, and liable to be startled into fracture by impact trifling when compared with what it may have borne safely as a dead-weight.

Proving long metal castings by straining them upon their transverse section does but aggravate imperfections, and leave the casting weaker; whilst no dead-weight proof is proof as against blows or other action inducing vibration. It is only under circumstances which do not admit of concussive action upon the beam, or which prevent it from vibrating under any shock that may reach it, that cast iron can be safely used in beams of long lengths to carry heavy weights, without some appliance to mitigate, at least, the imperfections which this substance exhibits.

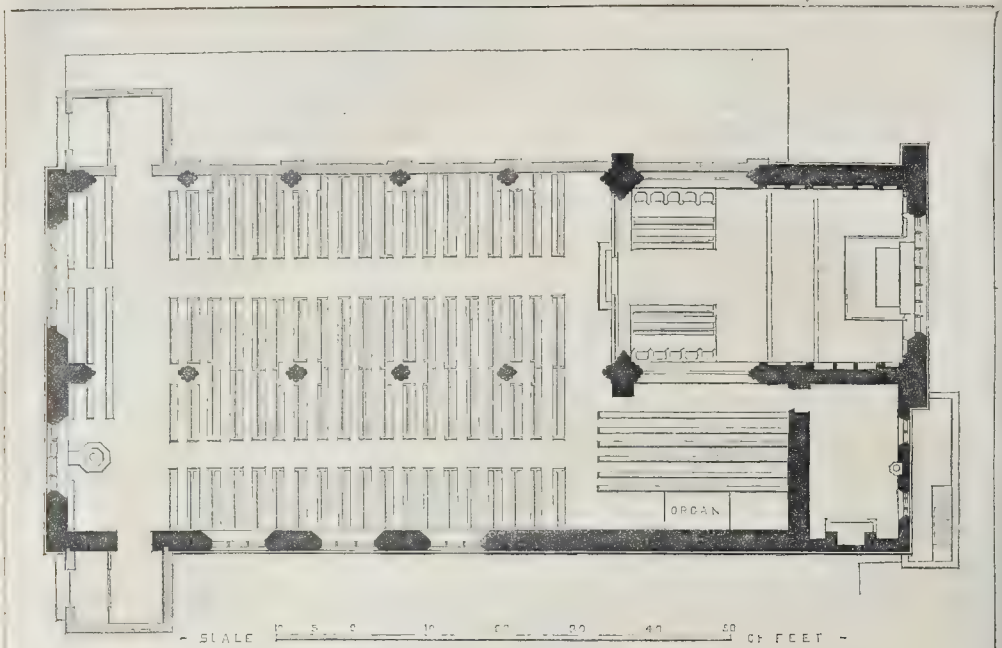
The application of wrought-iron tension bars as soles to beams and girders of cast iron would prevent the most serious consequences from attending the failure of the casting, if the beam were also prevented, by binders, or by other sufficient means, from turning round when the blow produces an oblique fracture.

The foundation of a building of ordinary weight is, for the most part, sufficiently provided for by applying what are technically termed footings to the walls. The reason for the footing is, that the wall obtains thereby a bearing upon a breadth of ground so much greater than its own width or thickness above the footing, as to compensate for the difference between the power of resisting pressure of the wall and of the ground or ultimate foundation upon which the wall is to rest. It will be clear from this, that if a building is to be erected upon a rock as hard as the main constituent of the walls, no expanded footings will be necessary: if upon chalk—upon strong or upon weak gravel—upon sand—or upon clay—the footing must be expanded with reference to the power of resistance of the stratum to be used as a foundation; whilst in or upon made-ground, or other loose and badly combined or imperfectly resisting soil, a solid platform bearing evenly over the ground, and wide enough not to sink into it, becomes necessary under the constructed footing. For this purpose the easiest, the most familiar, and, for most purposes, the most effectual and durable, is a layer of concrete, which may be formed so as to cover a surface large enough to obtain from the most yielding soil the amount of resistance to pressure required to support the weight of the intended building. It will be evident that upon a concrete foundation a footing or expanded base may or may not be required to a wall, according to the hardness of the concrete and the kind of wall to be built; but it is, perhaps, better to give the footing to the wall than to wait for the sufficient induration of the concrete to enable the wall to do without a footing; and better still, to lay the concrete of such height only, with reference to the spread or extent of base beyond the toes of the footing, that the gravel of which the concrete is made would stand at in an uncombined condition.*

Inasmuch, however, as some soils are liable to change in form, expanding and contracting under meteoric influences, as clays which swell when wetted and shrink when dried, concrete foundations are commonly interposed upon such soils to protect the building from derangement from this cause; or rather, to that effect walls are brought up from a level sufficiently below the ordinary surface of the ground of the cheaper material, concrete, instead of the more expensive brick or stone structure.

When concrete is used to obviate the yieldingness of the soil to pressure, expanse or extent of base is required to answer the end; and to this end the concrete, being widely spread, should be deep or thick as a layer, only with reference to its own power of transmitting to the ground the weight of the wall to be built upon it, without breaking across or being crushed. But when concrete is used as a substitute for a wall, in carrying a wall down to a low level, it is in fact a wall, wide only in proportion to its comparative weakness in the absence of manipulated bond in its construction, and encased by the soil within which it is placed.

Concrete, indeed, is at all times more safely to be regarded as a substance to be placed as a layer, than as a substance to be set up as a wall; for although excellent erections as walls may be made of concrete—as erections in the same form may be made of tempered clay—neither concrete nor tempered clay is to be regarded as a proper substance with which to form the lofty walls of buildings in towns."



EGYPTIAN DISCOVERIES.—Mr. John B. Greene, son of an American banker, while clearing away the palace of Medinet Habora, is said to have discovered the celebrated Egyptian calendar of which Champollion could only copy the first lines. Colossal figures have been brought to light, one of them showing the features of Ramses III. In clearing round this colossus, inscriptions of the grand portal between the two courts, and the existence of a pavement in granite, were revealed.

---

* A cog-hold is best obtained through the agency of a chair of cast iron, which should, however, be itself cogged or joggled to a stone template laid in the wall under it, and be capped or covered by another broad flat stone as an inverted template, with a jogge from the chair running up into it.

* The author, being in Paris in 1846, measured the thickness in the ground-floor story of a newly-built coursed-rubble party-wall in the Rue de la Banque (the Gresham-street of Paris), and found it to be exactly 28 English inches in that part, whilst the total height of the wall was not less than 85 feet. The wall run up of that same thickness through six stories, a height of not less than 65 feet, and was terminated by a gable of from 12 to 15 feet high, of the same kind of structure; and there was, besides, a vaulted basement story, throughout which the wall might have been 20 inches thick, as other similar walls then in progress to neighbouring buildings proved to be.

* This is indeed the only safe practice in cases in which the full induration of concrete cannot be obtained before the wall or other structure to be raised upon it shall begin to be built. Gravel poured dry upon the ground will resolve itself into a cone, having an angle of inclination to the horizon more or less acute, according to the sharpness, or otherwise, of the sand and stones of which it is composed.

PLAN OF CHURCH OF ST. MARY MAGDALEN, MUNSTER-SQUARE.

THE METROPOLITAN BUILDINGS BILL.

The Metropolitan Buildings Bill is, at the last moment, the third reading, going through a series of proposed amendments, to be moved by Viscount Duncan. The exemption of "necessary repair" from the Act is to be qualified by the words, "not affecting the construction of any external or party wall." The rules of Schedule K of the present Act, with regard to rooms for habitation, are to be inserted after being made more stringent. Rules for projections are to be adopted from the present Act; nevertheless, eaves and soffits of overhanging roofs are to be of incombustible materials, and not to have the relaxation in their favour which was carried in committee of the whole House. Section 25 will be omitted with the last objectionable amendment in the committee of the whole House. The rule of the present Act respecting "back yards" is to be adopted, except that every house must (unless lighted and ventilated from the street) have 100 superficial feet of open space *exclusively* belonging thereto. We venture to think that this would be too stringent, especially in the case of shops on the ground-story, which may cover the whole of the owner's ground without injury to health. Those clauses of the present Act which have reference to noxious trades have been adopted in the Bill.

We believe an amendment will be proposed, allowing the district-surveyor's entry on premises for a month after discovery of works done, in cases where no notice of them had been given to him.

The Metropolitan Board of Works are to have the power of allowing thinner walls than are prescribed by the Act for the dwelling-house and warehouse classes.

But the proposition which seems most objectionable, as well to architects as to the officers themselves, is a proposition to be brought forward that the schedule prescribing the thicknesses of walls of public buildings shall be struck out entirely, because of its manifest anomalies, and that the district surveyors shall have the determination of what is sufficient in all cases, not only respecting walls, but with regard to floors, roofs, galleries, staircases, and other parts of those buildings.

This proposition is so clearly at variance with the whole scope of the Bill, that we cannot think it will be adopted, for why should *specific* rules be framed to regulate minor matters, as is the case in all other parts of the Bill, and in this most important part, an unlimited discretion be given to the officers?

Would it not be better that the present rules for public buildings should be now passed, as they can be hereafter revised or recast by the Metropolitan Board of Works, under section 52?

ST. MARY MAGDALEN'S, MUNSTER-SQUARE, REGENT'S-PARK.

This church was erected from the designs of the late Mr. R. C. Carpenter, and under his superintendence. His works, as described in a memoir of his life, in the *Builder*, in April last, are extensively distributed in the provinces, but this is the only specimen of his skill possessed by the metropolis, and we have thought it desirable to give illustrations of it. The church of St. Mary Magdalen owes its foundation to the munificence of the present incumbent, the Rev. E. Stuart. It is designed to consist of a nave, with two aisles, and a large and lofty chancel. The tower, with a stone broach spire, will stand at the south-west angle of the church, in Osnaburgh-street, and the north side of the church will be open to Munster-square. The east end abuts on Laxton-street; so that ultimately three sides of the church will be exposed to view, and the situation, though in a thickly populated neighbourhood, is in this respect more favourable than can usually be obtained where space is so valuable. Our description necessarily speaks of the future, as the structure at present consists only of the chancel, nave, and south aisle, which were completed and opened for divine service in April, 1852. This site, when cleared of an extensive railway carriage factory and other buildings, was found to be so completely excavated to a depth of about 14 feet, that it was decided to carry up a substructure of brick piers and arches to the level of the street, due precaution being taken to prevent unequal settlements, and this has proved eminently successful. This done, the superstructure of Kentish rag, with Bath stone dressings, was placed upon it. The style is that of the fourteenth century. The nave and aisle have both gabled roofs, of Baltic fir timber, open to view inside, massive in their framing, and effective in appearance. The chancel roof is arched with timber, boarded and panelled. The east window of the chancel, which is of seven lights, is original in design, and is filled with stained glass, at a cost of 400*l.* by Hardman, of Birmingham, and is also interesting as being one of the last works upon which Pugin was engaged before his services were lost to the art. The lower part of the chancel is adorned by a series of richly carved arcades, with shafts of St. Ann's marble, and panels in the spandrils, filled with the same material. The whole of the arcades, as well as the chancel roof, are also highly enriched with colour and gilding, executed by Messrs. Crace, of Wigmore-street. The arcade on the south side of the chancel is varied, to form sedilia for the officiating clergymen, and the floor is raised three steps above that of the nave, and is separated from it by a stone septum. We shall give a view of the arcade hereafter. The west window of the nave is a fine one, of five lights, which it is intended to fill with stained glass, in memory of the architect. The position of the organ, which is raised on massive stone corbels projecting from the south wall of the aisle, at the east end, has been described by a musical authority as the best arrangement that has come under his notice. The performer is placed underneath the organ, on a level with the congregation, and faces the choir. The bellows are in a chamber beneath the floor of the church. The chancel is floored with Minton's encaustic tiles; the nave and aisles wholly with plain tiles from the same manufactory. The benches are of stained deal, and are moveable. Provision for kneeling is made by a strip of cocoa-nut matting laid between each bench, and a commendable attention to the wants of the congregation is shown in the provision of hymn-books for their use, which is fully rewarded by the heartiness with which they join the choir in the service. The cost of the church, as far as completed, has been about six thousand pounds. The contractors were Messrs. Kelk, of South-street, Grosvenor-square.

CHURCH OF ST. MARY MAGDALEN, MUNSTER-SQUARE, REGENT'S-PARK.—The late Mr. Carpenter, Architect.

THE CRYSTAL PALACE.

A VERY beautiful model of the Coliseum at Rome, restored, has recently been placed in the Roman Court. This is an addition especially interesting to architects. The model exhibits great research, and has been executed with extraordinary care by Dr. Emil Braun, of Rome, assisted by Signor Francesco Pieroni, a Roman architect. The scale is one-eighth of an inch to a foot. Every opening is filled with its statue. The details are beautifully made out, and the posts for the *Velarium* are in their places at the top.

The plants are now in a beautiful condition, and the whole place full of charms.

The one drawback is the difficulty of access. The slowness of the trains, the pressure and inconvenience to which those who are coming away are subjected, and the difficulty to which those who go late are unnecessarily exposed, by being forced to fight their way through the out-coming multitude, are constantly brought before us. Surely some of these evils could be remedied.

PROVINCIAL NEWS.

Taunton.—The local *Courier* states that the foundation-stone of the new Assize-halls will be laid on 14th August.

Wolverhampton.—It is in contemplation to enlarge the Wolverhampton workhouse at a cost of 2,000*l.*

Birmingham.—An appeal on behalf of national schools about to be erected at Aston, has just been issued. These schools will be for 700 children, with suitable residences for master and mistress, and will be built in the immediate vicinity of the parish church. Plans have been prepared, a site purchased, and donations secured, amounting, with anticipated grants, to 1,500*l.* leaving 700*l.* still to be raised. The building is from designs by Mr. Empson, of this town, and will be chiefly in the Tudor style, some portions partaking of the character of the Decorated period, with a small tower and spire.

Weston.—The opening of the new dock at Weston Point, belonging to the trustees of the Weaver navigation, was formally opened on Thursday, in week before last. The works consist of a lock opening into the Mersey, 60 feet wide and 100 feet long, with a gateway 34 feet wide; and at the upper end another lock, through which the Weston canal to Northwich is entered. The basin and locks are constructed of Runcorn red stone, with two courses of Welsh limestone, placed at certain distances up the walls, to prevent the friction of vessels against the red stone. The whole of the work is set in "Halkin mountain" lime. The stone was supplied by Mr. J. L. Wright, from the Runcorn quarries; and Mr. Dean, of Northwich, was the contractor for the masonry. The works are from the designs of Mr. W. Saxon, resident engineer to the trustees. The whole was constructed under the superintendence of Mr. Donkin, clerk of the works.

Chorley.—The recently-erected baths at the alkaline and chalybeate springs of Whittle-le-Woods, Chorley, were opened on Wednesday before last. The baths, which have been erected at a cost of 1,000*l.* consist of a plunge bath for ladies, and one for gentlemen, the latter 81 feet long, 19 feet wide, and 5½ feet deep, and the former 16 feet long, 9 feet wide, and 3½ feet deep.

Guide (Darwen).—The chief stone of a new school was laid here on Saturday before last. The building is to accommodate 200 scholars, and to cost about 300*l.* of which 150*l.* is still unprovided. Mr. W. Thompson is to execute the mason-work, and Mr. William Hoghton, of Oswaldtwisle, the joiner work.

Edinburgh.—At a recent meeting of the City Paving Board, the chairman, Mr. Leburn, made a statement of various works which he said must shortly be carried out. In a report by the surveyor, estimates were given for these,—viz. for the laying of various streets in two ways, namely, in concrete and in sea sand. The total amount in concrete was 13,260*l.*; in sea sand, 11,370*l.*

Glasgow.—The narrow, inconvenient, and dangerous bridge over the Monkland Canal, at St. Rollox, says the local *Gazette*, is now removed, and workmen are busy with the preliminary operations for building an iron bridge, with a towing-path below. Meanwhile, the traffic is carried on over a temporary wooden bridge to the east of the road.

Montrose.—From an interim report laid before the Montrose Police Board, it appears that experiments are now in progress at the Haugh of Kinnaber, for ascertaining the capabilities of the Haugh for affording an additional supply of wholesome water for the town. According to the local *Review*, a well or tank has been constructed, 15 feet in diameter, and 15 feet in depth, through a fine sand and gravel soil, into which the water was flowing copiously, and from which it was being pumped by a water-wheel, at the rate of 288,000 gallons a day, and of excellent quality. Subsequently, the supply of water in the well at a few feet deeper had greatly increased, the yield being one-third more in quantity, the pumps continuously drawing day and night at the rate of 300 gallons a minute, or upwards of 430,000 gallons a day. This will give an additional supply for the town at the rate of 28½ gallons per head each day to the entire population, even though the yield be gradually lessened.

CHURCH-BUILDING NEWS.

Woodbridge.—There being a division amongst the Burial Board here as to the position of the intended chapels for the cemetery about to be formed, it was resolved that Mr. Cant, of Colchester, should be sent for, to look over and make a plan for laying out the grounds. This was accordingly done, and the plan was adopted, and directions given to have the specifications for both chapels prepared forthwith.

Handsworth.—The new church of St. Michael was to be consecrated on Monday last, by the Bishop of Lichfield. The church overlooks the celebrated Soho Works. It is cruciform in plan, consisting of chancel, nave, north and south aisles, transepts, clerestory, tower adjoining south aisle, and vestry. It is of the Decorated or Middle Pointed style, with a large admixture of Early English details. The chancel is separated from the nave by a moulded arch, resting on each side on a cluster of three cylindrical pillars, having foliated capitals. In the communion is a reredos of stone, and in the south wall sedilia containing three seats beneath a square-headed hood moulding, for the officiating clergy. The east window is of five lights, the head being filled with flowing tracery. Adjoining the chancel arch, on the north side, is placed the pulpit, resting on cylindrical shafts of black marble, each shaft having a foliated capital. It is octagonal, every compartment being ornamented with a tricusped ogee arch. The roofs are open. The tower is appropriated to the purpose of a baptistery, and contains a font, resting on a cluster of circular pillars. The seats, about 1,000 in number, are open and plain, 540 being free. Exteriorly the heads of the windows are filled with flowing tracery, approaching slightly to the Flamboyant style, and numerous buttresses terminate in pediments, with crockets and finials. A porch is attached to the south aisle; and on the south side, adjoining the chancel and transept, a small tower has been erected, surmounted by a dwarf octagonal spire, terminating in a finial. The tower adjoins the south aisle, is not yet completed, and has received a temporary roof at about the middle of the second stage. The expense of the erection of the structure is about 6,000*l.* the material employed being a light gray stone, with Bath stone dressings. The architect is Mr. W. Bourne, of Dudley, and the builder Mr. Jones.

Avon-Dasset.—A new Roman Catholic church here was opened on 4th inst. Mr. Myers was the architect. It consists of a nave, chancel, Lady Chapel on south of chancel, southern transept opening to Lady Chapel, and music gallery opening over the sacristry into the transept, whilst the sacristry itself connects the church with the presbytery. On the south-west rises a tower, surmounted with a spire, furnished with bell and clock. The lower portion of the tower forms a porch, by which the church is entered from the street. The altars are furnished with sculptured reredoses. The subjects carved in that of the high altar are the Nativity and the Flight into Egypt, whilst that of the Lady Chapel consists of enriched panels. Within a carved arch, surmounted by a floriated canopy of stone above the high altar, is a tabernacle of metal work, with chased and enamelled doors. A stone pulpit projects from the north side chancel arch, and is approached by stairs in the chancel wall. There are twelve stained windows, many of them gifts of friends of the founder. Mr. Hardman, of Birmingham, was the artist. In the centre lancet, over the high altar, is represented the Eternal Father, crowned, coped, and seated on a rainbow in a vesica, the atmosphere within which is of ruby seraphs, whilst angels hover over the rest of the lights. In the lancet on the right is the Virgin, in that on the left St. Joseph. On the northern wall of the chancel is a double lancet, in which are represented St. Peter and St. Paul, with their emblems. In the window near the pulpit is a historical representation of St. Charles Borromeo administering Communion to the plague-stricken people of Milan. The subjects which fill the two windows over the altar in the Lady Chapel, are the Annunciation and the Assumption; whilst the side window represents St. Stephen. There are three detached lancets at the west end. In the centre light is a representation of our Lord upon the cross: at the foot of the cross kneel St. Thomas of Canterbury on the one side, and St. Anne on the other. In the other two lancets are the Virgin and St. John in grief before their crucified Lord.

West Charlton.—The restoration of the parish church of West Charlton, which is intended as a memorial of the late Archdeacon Brymer, is now completed.

St. Asaph.—An obituary window is to be placed at the west end of St. Asaph Cathedral, in memory of the late Rev. Rowland Williams, of Ysceifiog. The work is to be entrusted to Mr. Gibbs, of London.

Rhyl.—The chapel belonging to the Calvinistic Methodists, which has been erected in Clwyd-street, Rhyl, was opened on 5th and 6th instant. It is in the Pointed style. Mr. Owen, of Llanrwst, was the architect, and Mr. Morris, builder, Rhyl, the contractor. The whole cost is about 1,800*l.*

Manchester.—The restoration of the clerestory, windows, &c. of the whole of the six south bays of the collegiate portion of the cathedral of this city, next the east end, is now completed. Where the collegiate portion of the church terminates, and the parish part commences, is indicated on the roof by an octagonal turret. On the west or parochial side of this turret, two bays have been completed, and two others are now in progress. It is thought that if adequate repairs be not made on the tower, there will, sooner or later, and perhaps sooner than is anticipated, be a downfall of a very dangerous kind. Instead of the soft and friable red sandstone of which the tower is built, all the restorations on the south side of the cathedral are being made with the stone from the Fletcher Bank quarries, Ramsbottom, near Bury; which is a peculiar kind of sandstone grit, very hard to work. Knowing how often a thick layer of plaster hides superior though older work below, those engaged in the restorations cut away a portion of the old plaster-cast restorations, and, at a depth of 4½ inches below their surface, found the Gothic mouldings of the earlier architecture. These have been their guides and models in the restorations. Inside, the south clerestory of the choir or collegiate part is being cleansed and washed.

Gainsborough.—The opening of the new church at Luddington took place on Tuesday before last.

Gateshead.—The restoration of St. Mary's Church is progressing. The stained windows, it is said, will be replaced, and the one intended for the chancel of the church is about to be entrusted to Mr. Wailes, of Newcastle, who is also designer of it. The principal figure is our Saviour, with Matthew and Mark on his right, and Luke and John on his left. In the larger circular openings of the tracery are represented the Baptism of the Messiah, the Lord's Supper, and the Resurrection; and in the smaller, the royal arms and the arms of the borough. Below the figure of Jesus, and above the record of the

sufferers by the explosion of 1854, there is introduced a representation of the falling tower of Siloam, with the words, "Think ye they were sinners above all men that dwelt in Jerusalem? I tell ye, nay; but, except ye repent, ye shall likewise perish."

DIFFUSION OF KNOWLEDGE OF ARCHITECTURE.

CONSIDERING the value and importance of architecture, we have often wondered that its great leading principles have not been made a subject of study in our schools, and a means of mental education. Some may not recognise the necessity or desirableness of such study: some doubt its practicability. It would be easy to show it is an acquirement affording largely that very sort of training and discipline which it is the business of schools to impart. The leading principles or laws of architecture may be laid down with all the precision which belongs to science. He who, after learning them, has no occasion to practise them, would still have acquired something which, if it did not avail him as a divine, as a lawyer, or as a physician, which ever he might be, would yet avail him as a man; and it would by no means hinder him from acquiring the specific knowledge of his profession. All practical sciences, as arithmetic, grammar, navigation, and the like, are thus taught. Rules are laid down and examples are subjoined; not that these examples are the cases, much less all the cases, which will actually occur; they only explain the principle of the rule, and are given as so many specimens of the method of applying it.

The whole art and science of war (as far as theory goes) is thus taught by Callander in his "Military Maxims,"—a collection of beautiful maxims; to illustrate which follow a variety of examples from battles and engagements, ancient and modern.

We would take this interesting book as a model for the popular teaching of architecture and its principles. The teacher might also consult to great advantage Professor Donaldson's "Maxims of Architecture, Theoretical and Practical;" Rickman's "Attempt to Discriminate the different Styles;" Durand's "Parallèle d'Architecture," and comparative views of celebrated edifices. Such works would form the public taste. Sums of money ought to be granted by Government for having them at all the free libraries and institutions throughout the country.

F. L.

THE NEW PARISH CHURCH OF ALDHAM, NEAR COLCHESTER.

THE new church of Aldham, near Colchester, was consecrated by the Bishop of Rochester on Friday, the 13th instant. The old church, in an inconvenient out-of-the-way part of the parish, was comparatively unknown, and to those who sought it out, presented a picturesque rural church with great brick buttresses of enormous strength shouldering up the old walls, round which the graves had risen as if to meet them half way in their expected fall; so that when you descended into the church, you were not surprised that the rude brick pavement was damp and the walls green. But it has all been pulled down, and the old materials removed to the present convenient position, where it has again arisen in its old form and dimensions, with the addition of a tower and stone spire. The old oak porch is well known to lovers of church architecture as a specimen of the work of the fourteenth century,* and here it is safe and sound.

The aisle is separated from the nave by an arcade of three stone arches and columns. In the old church a row of wooden posts occupied their position, and carried the junction of the nave and aisle roofs; but the foundations of the older columns were discovered, and a portion of one of the base mouldings (which, indeed, was re-used as the "first stone" of the present church) formed the key by which this arcade has been designed. A new stone chancel arch carried on corbels separates the nave from the chancel. The corbels are carved, and contain a figure of St. Peter in one, and St. Paul in the other. We do not understand that there was any vestige of a chancel arch in the old church. The east window is filled with stained glass, the centre light representing the Saviour: it is the work of Messrs. Ward, of London, who have also supplied one of the two-light windows on the north side representing the Crucifixion and Ascension. This is a memorial window to the parents of the present rector; while a portion of the east window is a memorial of Dr. Morant, one of the former rectors, and the well-known historian of the county.

The old roofs have been used throughout, with no attempt to hide their old stains and scars. The seats, which are all open, are of deal, stained and varnished; as also the pulpit, prayer-desk, lectern, and stall seats: on the latter are carved emblems of the four Evangelists.

The old ironwork has been preserved, and the abstracted rings restored to the doors.* There are also two bells of the fifteenth century, of most musical note. For the curious in such matters we add their inscriptions,—"Katerina vocata sum rosa pulsata mundi," on one; and "Margareta ora pro nobis," on the other one is 2 feet 9 inches, and the other, 2 feet 4 inches in diameter. The total length of the church, internally, from west to east, is 82 feet 6 inches; the width, including the aisle, 35 feet 9 inches; the internal height to the upper part of the roof, 35 feet; the height of the spire, including the weathercock, 96 feet.

The church accommodates 270 persons, and the cost has been about 1,600*l*.

The ground on which the church stands was given by Mr. Weston, and the spire was given by Mrs. Gee. Mr. Edward Hakewill was the architect; Mr. Luff, of Ipswich, the builder.

* See Brandon's "Analysis," plates 12 and 13.

ARCHITECTURAL AND ARCHÆOLOGICAL CONGRESSES.

The Liverpool Architectural Society have made their annual excursion, visiting Crewe Hall and Nantwich Church. A writer in the Liverpool *Daily Post* says:—"Crewe hall is a quadrangular building, built chiefly of red brick, with some lozenged-shaped ornamental work in black brick; the door frames, mullions, and cornices of cut stone; and the roof surmounted by a group of tall octagonal chimneys, of moulded brick, which add much to the effect of the general appearance. The hall stands in a well-planted park, of 552 acres; and beneath a new esplanade on the north side there is a magnificent sheet of water covering 95 acres. Each front of the building is broken by the projection of large bay windows. There are entrances on the east and south fronts, the latter of which opens on a staircase of singular curiosity and beauty.

The Chester Archæological Society selected for their annual excursion St. John's Church, Hawarden, Offa's Dyke, Hope Church, Caergwrle Castle, and Mold. A discussion took place as to the etymology of Caergwrle. The Rev. Mr. Massie and Mr. Ayrton contended for Pennant's definition, namely, "The Camp of the Giant Legion," and supported their arguments by the following derivatives,—*Caer*, a fortification, *gwr*, a man or a strong man, and *lle* or *le*, a place; while Mr. Hicklin read a letter from Mr. Williams, of Chester, assigning a different signification. The writer, sustaining his views, says,—"You will judge for yourselves when you ascend the hill, and see it covered in a remarkable manner with a plant which I do not know on dry ground anywhere else. It is the bog-myrtle, called in Welsh, *Gwyrl*. My impression is, that, before the castle was built, the hill was *Bryn Gwrli*, and afterwards *Caer Gwrli*."

The Worcester Architectural Society have held a meeting at Warwick. Several papers were read; among them one by the Rev. W. Staunton, on "Church Architecture as a popular and interesting Pursuit; with some Remarks on the Church of St. Mary, Warwick;" another by the Rev. G. Ayliffe Poole, on "Photography and the Sketch-book;" and one by Mr. Parker, of Oxford, on "Kenilworth Castle." At the conclusion of the meeting visits were paid to St. Mary's Church, the Beauchamp Chapel, the Castle, Lord Leycester's Hospital, and All Saints' Church. There was a *conversazione* at the Court-house, when papers were read, and subjects of architectural and antiquarian interest discussed; and an excursion to Kenilworth, Temple Balsall, Knowle, and Solihull.

* See Analysis, plate 5, sec. 2.

Norfolk and Norwich Archæological Society.—The summer excursion of this society took place on Thursday and Friday before last, the churches of Marshland being the subjects of investigation. The meeting commenced under the presidency of Sir Wm. Ffolkes, Bart. at Wisbech Museum, where a paper on Wisbech Church was read by the Rev. W. B. Hopkins. After visiting this church, the company were conveyed to Walsoken Church (where a paper was read by Mr. Harrod, the secretary); to West Walton (paper by the Rev. E. Blencowe); by the Roman Sea Bank and the Marshland Tumuli to Walpole St. Peter's (paper by Rev. E. Blencowe), and Terrington (paper by Mr. Harrod); whence they proceeded to Lynn. On the following day, the churches of Tilney and Wiggenhall St. Mary's, Wallington Hall, and Stow and Wimbotsham Churches were visited.

SPONTANEOUS COMBUSTION.*

THE original form of a pamphlet on this subject now before us, was a paper read before the Literary and Philosophical Society of Liverpool, by Dr. Inman, who was lately a vice-president of that institution. The treatise is an important one, embodying a larger and more complete account of what is known of the circumstances and causes of spontaneous combustion than we have yet seen. It also contains an account of various experiments by the author himself, which tend still further to throw a light on this heretofore nascent and somewhat obscure subject. In testing the influence of different substances on painters' oil, for instance, in evolving heat and producing spontaneous combustion, he found that charcoal had the most powerful influence; and, indeed, of this fact painters are already aware, inasmuch as they know that lamp-black and their oil have at once to be ground, or they will ignite even in a few minutes. Next to charcoal stood sponge, then worsted, saw-dust, cotton-wool, tow, and shavings. The precise measure and time in which these various substances absorb oxygen when mixed with the oil are noted in a tabular form. We were rather surprised to find worsted, an animal substance which merely singes and does not tend, under ordinary circumstances, to burst into flame when fire is applied, ranking here next to charcoal and before cotton-wool; but our impression of the greater risk of spontaneous combustion from cotton than from animal wool is nevertheless borne out by these experiments; for Dr. Inman afterwards remarks, in reference to cotton, though not specially to animal wool, that in effect, and on account probably of the relative forms and surfaces, and access to air, of the different substances, "it is far more difficult to get small quantities of tow to ignite, even under very favourable circumstances, than cotton-wool: indeed, we may say that when the quantities used are small, it is difficult to procure actual ignition with anything but cotton-wool: when the quantity used is large, it is only a question of time." One point well worthy of notice, is the enormous amount of oxygen absorbed by painters' oil *in the first twelve hours*, compared with the ultimate quantity. This, the writer suggests, may explain how it is that fires so frequently break out within a *very brief* period after workmen have quitted premises where they may have been using painters' oil, and have left their greasy aprons, rags, or pieces of cotton on which their hands may have been wiped near to each other, *or to a warm steam pipe, or stove not yet cold* (or in a warm summer-day or sunshine, we might add); or that some few drops of oil have extended from the cans to some dust, sawdust, shavings, and the like. In such cases, we have the materials provided, and the train laid, as it were, for a conflagration which will burst out in an hour or two. Professor Graham refers to instances of olive oil igniting upon sawdust; of greasy rags from butter heaped together taking fire within twenty-four hours; of the spontaneous combustion of tape-measures, covered with oil var-

* "Spontaneous Combustion, and the Best Means of Extinguishing Fire. By T. Inman, M.D. London: Ward and Lock, Fleet-street. 1855.

nish; and even of an oilskin umbrella put aside in a damp state. The ignition of such materials, generally, it must be noted, is greatly favoured by a slight warmth, such as the heat of the sun.

Dr. Inman suggests, for the extinction of fires, in warehouses especially, and in ships, the previous arrangement of iron spouts, commencing outside in a convenient position, and running into the interior of each apartment or space likely to be exposed to the occurrence of fire, either spontaneously, or communicated by accident or otherwise. Through these spouts such gaseous substances as carbonic acid, or nitrogen as from the Fire Annihilator, might then, he remarks, be poured in without the necessity of opening doors, windows, or hatches, and of so admitting the air which inflames and increases the combustion. In certain cases, he adds, even the water-hose might be fitted on to the ends of such pipes, and deluge the burning materials.

The public are much indebted to Dr. Inman, and also to Mr. Papworth (whose tract we lately noticed), for the collection of the facts they have put together on the subject of spontaneous combustion.

COMPETITIONS.

Warwick.—Designs for a new corn-exchange, by Mr. Murray, have been selected.

Aberystwyth Clock Tower.—We continue to receive complaints that competitors have not been able to get back their drawings.

Peterborough New Church.—We are informed that forty-four designs were submitted to the committee for the proposed church at Peterborough, from which one by Mr. E. Ellis, of London, was selected.

Keynsham Schools.—A competition for proposed parochial schools at Keynsham, near Bristol, has been decided in favour of Mr. Masters. Various plans were sent in, out of which three were selected for builders to estimate from, viz. by Messrs. Gabriel and Hurst, Mr. Davis, of Bath, and Mr. Masters, and the ultimate selection was then made.

Kilkenny.—Mr. R. Burnham's plans for additions to the County Court House, Kilkenny, having been approved of in a competition for a premium of 22*l.* 10s the grand jury proposed that the premium should be deducted from the per centage for superintendence, and furnishing working drawings, &c. As Mr. Burnham declined to accept the proposition, they decided on having no architect, leaving the building in the hands of the contractor and clerk of works! The architect declined to accept the proposition because he conceived he had already earned the 22*l.* 10s.

BUILDERS' BENEVOLENT INSTITUTION.

ON Wednesday last the eighth annual general meeting of the friends and supporters of this excellent charity was held at the London Tavern, for the purpose of receiving the report, and upon other business. Mr. W. Lee, M.P. the president, took the chair.

Mr. A. G. Harris, the secretary, read the report, which congratulated the subscribers upon the success which continued to attend the institution. During the past year two elections had taken place, at which seven persons had been elected, making the total number at present enjoying the benefits of the charity, twenty-nine, viz. sixteen males and thirteen females. The amount paid in pensions since the institution was established was 1,979*l.* 13s. 4*d.* The annual ball, under the superintendence of the honorary secretary, Mr. Joseph Bird, realised to the funds the sum of 74*l.* 14s. 6*d.* The subscriptions and donations received in the past year amount to 1,225*l.* 9s. and 400*l.* stock had been added to the amount funded in the names of the trustees, viz. 200*l.* stock to the relief fund, and 200*l.* stock to the building fund, making the total amount invested in the Three per Cent. Consols, 4,750*l.*: 3,250*l.* stock to the relief fund, and 1,500*l.* to the building fund, with a balance at the bankers' of 338*l.* 2s. 11½*d.* The report, after calling upon the subscribers to place the means at the disposal of the directors to enable them to take in the unsuccessful candidates, concluded by stating that Mr. C. Lucas had consented to accept the presidentship for the year ensuing.

Mr. Joseph Bird having moved the adoption of the report,

Mr. George Bird, the treasurer, seconded the motion, and remarked that there never was a time when so many persons were in want of the benefits of this institution as at present. He was not aware whether they were all of the proper age to be admitted; but if they had subscribed more liberally in their prosperous days—and he called the attention of the meeting and the collectors particularly to that fact—the directors would have been enabled to place a larger number upon the list for election. In conclusion, he trusted that the builders generally would support their new president in large numbers at the next annual dinner in October next.

The motion was carried, as was also a vote of thanks to the trustees, moved by Mr. Cozens, who bore testimony to their valuable efforts on behalf of the charity.

Mr. Lee, M.P. in reply to a vote of thanks, said he regretted that his suggestion with regard to the amalgamation with the Tilers' and Bricklayers' Almshouses had not been adopted, but he trusted that it would yet be carried out. He should this year be master of the Tilers' and Bricklayers' Company, and if he could in that capacity serve them, he should be most happy to do so: in fact, they might reckon upon his co-operation in this good work at any time.

THE ARCHITECTURAL ASSOCIATION.

THE Architectural Association Class of Design have elected Mr. Thomas M. Rickman their president for the ensuing session. Messrs. Thomas W. Horn and R. Druce continue as secretaries, and Messrs. R. Druce and A. MacGachen are the curators. The class is particularly recommended to the younger members of the profession as a source of wholesome emulation, their meetings combining pleasure with profit. An address will be read by the president at the opening meeting of the session 1855-56, which will be held at Lyon's-inn-hall, Strand, early in October.

HOUSE DRAINAGE ACT.

By this Act, the 18th Vict. cap. 30, the Metropolitan Commissioners of Sewers are authorized to exercise powers of house cleansing, drainage, and improvement, for the purpose of executing, in houses which may appear exposed to the ravages of zymotic diseases, palliative and preventive works, either temporary or permanent, to obviate the outbreak and spread of such epidemic disorders; and to carry on such works they are authorized to employ a sum not exceeding 25,000*l.* and to charge the cost of such works upon the owners or occupiers of the premises in which the works are executed. The commissioners having considered the provisions of the Act, a resolution was adopted that it should be carried into effect. The following resolution regulating the manner in which it should be carried out was then, after a lengthy discussion, adopted.

"That any money which the commissioners shall resolve to expend under the House Drainage Act, be laid out on those houses which are most exposed to the ravages of disease, preference being given to any such houses from which there appears the best prospect of being able to recover the amount expended, and chiefly for combined works. That in putting the Act into operation it is, in the opinion of this commission, inexpedient to empty cesspools during the hot months, except in cases of extreme emergency."

To make the first experiment, Giffin-street, and Regent-street, Deptford, were selected.

At the succeeding court, held on Tuesday in last week, the report of Mr. Donaldson, the district surveyor, was presented as to the expense, and it appeared that the average cost of each house being provided with a water-closet, cistern, pipes, and other accessories, was 12*l.* while the rent paid by the tenants was 5s. a week for each house. The commissioners, on considering the subject, found that they could not certify that, in the words of the Act, this was a "reasonable and proper" charge in reference to the rent of the premises where the works were to be executed, and the proposal for carrying the Act into operation in the locality in question was therefore negatived, and the Act thus far remains inoperative.

ACOUSTICS.

YOUR periodical, Vol. XII. page 342, contains a paper on Fountains Abbey, in which mention is made of some *jars* that have been discovered there, lying a little below the level of the floor, the use of which the writer of the paper is at a loss to conjecture. A paper read by Mr. Walbran, before the Yorkshire Architectural Society at Skipton, in Craven, also speaks of them; but the author confesses himself quite puzzled as to the purpose for which they were intended. Similar ones have been discovered at Norwich, and a communication respecting them has appeared in "Notes and Queries." Others, again, have been found in the church of St. Mary, Youghal, built into the wall, about 25 feet from the ground; and Mr. Fitzgerald, in a notice of them printed in the Proceedings of the Kilkenny Archæological Society for March last, gives a highly probable solution of the enigma, viz. that they were designed for *acoustic purposes*; and he quotes ancient examples to support his view.*

How far they might answer that end I dare not guess; but it has struck my unprofessional mind, that the shafts of Purbeck marble with which our cathedrals abound might be partly intended to serve the same purpose. Their sonorous properties are known to every one, and Paley ("Gothic Architecture," p. 97) says, "We have somewhere read of an arcade whose shafts were attuned in regular progression." That their colour and polish were intended to please the eye there can be no doubt; but this does not prevent their having been also meant to give resonance to the spacious buildings in which they are found. It is needless to observe that in the present day the acoustic qualities of churches, lecture-rooms, &c. often cause great disappointment, and if any thing could be done to facilitate the transmission of sound to the ear in our public edifices, without offence to the eye, it would be a great benefit to the community. This must be the apology for these suggestions to a learned body like the readers of the *Builder*, offered by

A COUNTRY PARSON.

* This supposition was of course started when the jars were discovered at Fountains, but their position seemed to make it untenable.—ED.

SURVEYORS' CHARGES.

POLAND *v.* TEBBUTT.—In this case, at the Bloomsbury County Court (before D. D. Heath, esq. Judge), Mr. Poland, the plaintiff, is a surveyor, of Margaret-street, Cavendish-square, and the defendant a tradesman in the same neighbourhood. The action was brought to recover 9*l.* 9s. as follows:—"Preliminary survey of house in Foley-place, as to the necessary repairs to be done, 1*l.* 1s.; drawing specification of repairs and fair copy, and superintending work of the value of 124*l.* at a commission of 5*l.* per cent. 6*l.* 4s.; settling up extra work and going through accounts, and finally settling same, 1*l.* 1s.; postage, 2s.; attendances upon Mr. Knight, &c. &c. as to an attempted encroachment upon the defendant's premises, 1*l.* 1s. Total, 9*l.* 9s." Of this sum the defendant paid 6*l.* 4s. into court.

Mr. Poland proved that in cases of repairs it was not usual to charge by commission, but by time. In this case he had taken into account the position of the defendant, and had charged by commission, and not time. He had no idea that the amount would be disputed, as he had sent in his bill upwards of a twelvemonth; and when he found there was a dispute, he had offered to refer the matter to Mr. Lockyer, a gentleman who had originally introduced him to the defendant.

Mr. Hunt, a surveyor, proved that the prices charged were fair and reasonable. He said,—"The plaintiff has made a mistake in this case, for he ought to have charged by time, as it is impossible in a case of repairs to do otherwise." Considered the time occupied in the preparation of the specification must have been three or four days.

The plaintiff's clerk, and a builder, were then called to prove that due diligence had been used in the superintendence of the work.

Mr. Williams (defendant's attorney) then submitted, that the plaintiff having made his election to charge by commission, and not by time, he could only recover commission; and, therefore, that the first, third, and fourth items, must come off. With regard to the last, he tendered evidence to show that the plaintiff never had been instructed to resist the encroachment.

His Honour, in giving judgment, said,—"I am quite clear that where a surveyor adopts one scale of charges, he cannot afterwards vary them. I am with the defendant upon that point."

The cause was then adjourned to enable the plaintiff to show that the third item was really for commission for extra work over and above the 124*l.*; and to produce evidence that he was fairly instructed to resist the encroachment.

His Honour said there was no doubt the plaintiff had not adopted the ordinary custom in such cases, but at the same time he was bound by his own election of the mode of charging.

TO MAKE RANCID OIL SWEET.

I HAVE much pleasure in acquainting you with the results of my experiments upon *rancid oil*, in accordance with my promise to that effect.

The following substances will *prevent* oil from getting *rancid*:—

1. Sweet spirits of nitre. A few drops added to the oil. The effect is due to the *nitric acid* of the spirit, oxidizing everything but the oil itself. The *hydrogen* has *nothing* to do with it.

2. Creosote appears to answer even better than the last.

3. Methylic alcohol ("comm. wood-spirit"), if added in small quantity to oil, will prevent its putrefaction, probably from the creosote, &c. it contains.

4. Hypochlorite solutions. The hypochlorite of soda is about the best, but a little *strong* solution of chloride of lime does very well, shaken up with the

oil: when required for use, the oil may be decanted from the top, or drawn off with a syphon; or let the mixed *oil* and *solution* be poured upon a circular filter, *thoroughly wetted with water*, and placed in a funnel, when the *solution* will pass through the filter, the *oil* being left. (Any liquid which does not perfectly mix may be separated in this manner,—the filter-paper to be previously wetted with the fluid intended to pass through).

5. Small pieces of charcoal, soaked with diluted nitric acid, I have found to possess similar properties to the above.

Substances that will make rancid oil sweet:—

1. Sweet spirits of nitre.
2. Creosote (*very uncertain*,—cannot be depended on).
3. Methylic alcohol (*very uncertain*,—of little use).
4. Hypo-chlorites (*quite effectual* in a few hours; in a few minutes if boiled: the *dry salts* are of little use).
5. Peroxide of manganese (very good).
6. Animal charcoal (very good, but takes a few days, unless boiled with the oil).
7. Charcoal (of no use unless boiled with the oil: that from *beech-wood* is best).

WENTWORTH L. SCOTT.

Miscellanea.

ST. PAUL'S-ROAD, CAMDEN-TOWN. — Allow me, through the medium of your columns, to bring before the notice of the proper authorities, whomsoever they be, a nuisance which exists in the new "St. Paul's-road," Camden-town. At the termination of the yet incomplete thoroughfare of "brick-noggin" houses there being erected, immediately underneath the railway bridge which crosses the fields, is a hollow ground, into which all the surface-drainage must run; and when the rain falls in any quantity (as recently the case), an unfordable, offensive pool is formed, shutting out all communication on either side the bridge. Taking advantage of this circumstance, a benevolent individual has established himself "in position" with a plank, for the use of which he *moderately* levies black-mail, insulting those who do not avail themselves of the desideratum. The consequence is, that passengers are compelled to submit to this extortion, with the additional risk of being tumbled into these Stygian deeps, "for a lark," by the numerous hangers-on, or to go half a mile out of their way in order to reach St. Augustine-road, which is a few paces *in sight* of them. I cry, "A boat—a boat!" for the shipwrecked public.—RHEUMATICUS.

THE CONDITION OF THE THAMES. The public attention still continues and no wonder—to be seriously occupied with the condition of the river. The Lord Mayor has been using praiseworthy exertions to agitate this question, and numerous correspondents continue to address us on the subject. The state of the water supply in Southwark and at Vauxhall is very bad, and the Chelsea Waterworks continue to give a fluid full of decaying matter to their customers, instead of water fit for culinary or other household purposes. We hope shortly to be able to put together some facts which may help to bring this serious question to a speedy issue.

CITY COMMISSION OF SEWERS.—At a Court held on the 17th instant, a report from the Cemetery Committee was read, which stated that the ground would not be ready for consecration till the end of September next; that a contract for planting the cemetery, at a cost estimated by the surveyor of the committee at 1,800*l.* would require to be entered into; and that the surveyor had employed a person to lay out the ground, whom the committee recommended to superintend the planting, at a cost not to exceed 100*l.* including travelling expenses. The report was unanimously adopted. The commissioners afterwards considered the question of water supply to the poorer dwellings in the City, and the increased charges of the water companies, and ordered a copy of the medical officer's report on the subject to be sent to the New River Company.

FALL OF THE HUTHWAITE TUNNEL NEAR BARNSLEY.—On Saturday and Monday before last portions of the Huthwaite Tunnel, on the Manchester, Sheffield, and Lincolnshire Railway, fell in, completely obstructing the passage. By the praiseworthy exertions of some workmen, who were hoeing turnips on the Saturday, timely notice was given, and many a valuable life probably saved, as an express train came up shortly after the first fall took place. The strata above the tunnel are shale, but it is also thought that the masonry of the arch has not been sufficiently knit together.

ST. PETER'S, WALWORTH.—Tenders have been received for repairs, &c. at St. Peter's, ranging from 520*l.* to 199*l.*! Mr. Thornhill's tender at 284*l.* was accepted.

METROPOLITAN MILE-POSTS.—In reference to the recent article on this subject in our columns, a correspondent states that about four years back he had cast-iron plates (such as one sent us), stating the distance from the Post-office, in St. Martin's-le-Grand, fixed along the lines of the Commercial, East India Dock, West India Dock, Barking, and Essex roads, at each quarter of a mile, upon the house frontages, and on wooden posts in the country. He took the centre of the Post-office portico as his starting point, and chained the distances. The other turnpike trusts, however, could not be prevailed upon to go out of their old jog-trot, and the requisite improvement was not further carried out. Our correspondent also made a tender, at Sir R. Mayne's request, for the determination of the exact intersection of the Hackney Carriage Act circle with the leading radiating thoroughfares, and to mark it by distinctive cast-iron plates; but, through the Ordnance authorities and others, it was discovered that there were no funds applicable to such a purpose.

THE RANELAGH SEWER.—I take the liberty of asking your attention to the condition of an open sewer (known as the "Ranelagh sewer"), at back of Bloomfield-terrace, Pimlico, with the hope that you may be induced to remark upon it in your valuable paper. It is proposed by the Commissioners of Sewers to cover it in, but a stoppage in the works took place about six weeks back, since which time it has been allowed to remain, accumulating daily, and now having nearly 3 feet of soil, exhaling the most nauseous and dangerous vapours. I have several houses in the immediate neighbourhood, and, by the request of many of the inhabitants, have made application to the Commissioners of Sewers, who, *once only*, caused some lime to be thrown in. I have since written to Sir Richard Mayne, and received a reply from him that he has no power to interfere with the acts of the Sewers Commissioners. I have also applied to the Board of Health (believing in such a matter, where life was concerned, that I should get assistance). Their surveyor visited the place, and made his report, of which I received a copy; but, beyond pointing out that such a place and nuisance *did* exist, and was dangerous to the neighbourhood, no ultimate good was done.—JOHN NEWSON, JUN.

ELECTRO-TELEGRAPHIC PROGRESS.—A submarine telegraph from Turkey to Egypt is about to be formed. The Turkish government have granted an exclusive concession for such a telegraph to run from the Dardanelles to Alexandria. The cost will be 120,000*l.* Proposals are also on foot for extending the project to India, *vid* Suez and Aden to Kurachee, at the mouth of the Indus, where it would connect with the Indian lines. The total length from the Dardanelles to Kurachee is about 4,000 miles, and the sum required for the whole (including the line to Alexandria) would be 850,000*l.* The entire line to India may, it is estimated, be completed in two years.

SCENERY AT THE ITALIAN OPERA-HOUSE.—In the production of Meyerbeer's last opera, "L'Etoile du Nord," Mr. Gye has brought into operation all his resources, and with a result which makes it to be regretted that it did not occur earlier in the season. The composer and the musical artists, Mdlle. Bosio, Mdlle. Marai, Formes, Gardoni, and Lablache, have been justly praised by our contemporaries of the press, and we may confine ourselves to offering tribute to the scenic artist, Mr. Beverley, and the director of the stage business, Mr. Harris. The first scene represents a village near Wyborg, with carved wooden house at the side, and the Gulf of Finland behind. The water is capitally painted, but the scene being kept somewhat dark, with due reference to its geographical position, pleased less than it would have done if it had been less truthful. The Calmucks make a very picturesque group. The scene for the second act, where rocks rise above rocks, interspersed with trees, especially when the soldiers gather together, and the Tartars and the grenadiers of Smolensko descend the mountains, is singularly effective.

SALFORD MUSEUM AND LIBRARY.—The attendance of readers and the issues of books at the Royal Museum and Library in Peel's-park, Salford, during the fortnight ending July 14, have been as follow:—Libraries: volumes issued from reference library, 2,443; volumes issued from lending library, 1,855; total, 4,298. Reading-room: attendance of readers, 4,241. Museum: attendance of visitors, 27,200.

TO PREVENT COMBUSTIBILITY OF WOOD.—In reference to the dephlogistic composition, I am not aware of Mr. Braidwood's, but your correspondent will find a mixture of equal parts of *alum* and *borax* (biborate of soda) answer every purpose.—S.

DOWNING-STREET IMPROVEMENTS.—The cost of acquiring sites and erecting new public offices is estimated at 385,000*l.*

THE PUBLIC HEALTH BILL will be postponed.

THE DWELLING-HOUSES BILL FOR SCOTLAND has passed through the Commons.

SALE OF UXBRIDGE-HOUSE.—The Bank of England have purchased for their West-end branch establishment the mansion of the Marquis of Anglesea, in Burlington-gardens, Piccadilly, for 45,000*l.* or 47,000*l.*

CONSECRATION OF CHRIST CHURCH, BAYSWATER. Last week the Bishop of London consecrated the new church in Bayswater-road, near the new carriage entrance to Kensington-gardens. A view will be found at p. 31, *ante*.

THE IRON TRADE.—The quarterly meetings have exhibited no further improvement in the position of this trade; and as yet there exists no increase of demand to justify the resumption of those furnaces that have been put to a stand. The amount of business done has been unusually limited. The extreme discredit into which the Staffordshire ironmasters seem to have fallen from the late disasters and consequent disclosures, has created such a feeling of distrust, that the sellers of pig iron and ironstone have shown an unusual indifference about making sales, except such as were compelled by circumstances. Better prices have been realised for good qualities, but very few parcels, and those of small extent, have changed hands. The prices of iron may now be considered as settled for a time, and the variation from the nominal list is much more contracted than three months ago. Rods and bars may fairly be quoted from 7*l.* to 8*l.* per ton; hoops, sheets, and plates, from 8*l.* to 10*l.*; the highest price for pig iron being 5*l.* 5s. average qualities 4*l.* 15s. and hot blast cinder pigs 65s. per ton.—*Birmingham Gazette*.

THE FOUNTAIN OF DIANA, IN BUSHY-PARK, is being restored.

MELLISH'S PERFORATED VENTILATORS have an advantage over others, inasmuch as the perforations are made obliquely, so that a tendency upwards is given to the air as it enters, and direct currents are avoided.

TENDERS

For Warley Barracks, for the East-India Company. Quantities furnished:—

Lee	£16,240	0	0
Brass	15,962	0	0
Kelk	15,875	0	0

BRICK and MARBLE ARCHITECTURE in ITALY, in the MIDDLE AGES: NOTES of a TOUR.
By GEORGE EDMUND STREET, F.S.A. Architect.
JOHN MURRAY, Albemarle-street.

NORTHAMPTON IMPROVEMENT COMMISSIONERS.—Notice is hereby given, that the Commissioners for Improving, &c. the Borough of Northampton, will, at a meeting to be held at the Guildhall, in the said town, on WEDNESDAY, the 1st day of AUGUST next, be prepared to receive APPLICATIONS from any person not resident in the town of Northampton, for the OFFICE of SURVEYOR. The salary of such surveyor will be 300*l.* per annum, and the person appointed must devote the whole of his services to the Commissioners, and will not be permitted to carry on any private business.—Printed particulars of the duties of the office may be had on application to the Clerk to the Commissioners. Applications for the office must be sent to the Clerk on or before the 31st day of JULY inst. and no candidate will be allowed to make a personal canvass.
C. MARKHAM, Clerk to the Commissioners.
Northampton, July 20, 1855.

AGENTS WANTED for the EMPIRE ASSURANCE COMPANY, 61, Pall-mall, London. The Agents of the EMPIRE ASSURANCE COMPANY are entitled, in addition to the ordinary commissions, to a direct and substantial interest in the profits of the Company. Every Director has qualified for his office by paying down 50*l.* on shares. Prospectuses, &c. free, and every information, on application to
EDWIN H. GALSWORTHY, Actuary and Secretary.

TO PARENTS AND GUARDIANS.
AN AUCTIONEER, SURVEYOR, and UPHOLSTERER, within a short distance from town, has a VACANCY for a PUPIL, where he will have every opportunity of acquiring a practical knowledge of the profession.—Address, B. B. Office of "The Builder."

FOREMAN WANTED.—One who is thoroughly understands the management and overlooking of men in a factory.—Apply personally, to Mr. CROUCH, Messrs. Tupper and Carr's, Patent Galvanized Iron Works, Regent's Canal Dock, Limehouse.

TO SURVEYORS AND BUILDERS' CLERKS.
WANTED, immediately, in a country town, a PERSON thoroughly qualified in all the duties of an office. A person with a good knowledge of construction, and a fair plain draughtsman, quick at figures and accounts, would be preferred. None but persons fully capable need apply.—Address, with age, particulars, and salary, in own handwriting, to A. B. Falcon-wharf, Blackfriars, London.

WANTED, an intelligent and active MAN, who thoroughly understands the MARBLE TRADE in all its branches, to assist in the management of a business of the above description. Good reference and security required.—Address, Z. A. Office of "The Builder."

WANTED, by a Builder, a GENERAL FOREMAN. A permanent engagement to a trust worthy and competent man.—Apply by letter to A. B. G. 34, Fleet-street, stating where last engaged, and references.

TO PLUMBERS AND PAINTERS
WANTED, immediately, an experienced HAND, competent to undertake the plumbing of several large houses. Address, X. Y. care of Mr Edward Hunt, Surveyor, Sydenham.

BUILDER'S FOREMAN.
WANTED, a FOREMAN, to take the entire charge of the building of the NEW ASSIZE COURT, at Taunton. He must be active, thoroughly competent, and strictly honest. Stating particulars, salary required, &c.—Apply to Mr GEORGE POLLARD, Taunton.

WANTED, immediately, an experienced WORKMAN, who thoroughly understands BELL-HANGING, GAS-FITTING, and the general jobbing trade of an Ironmonger. A good character will be required.—Apply to Mr BARKER, Stationer, Dorcas terrace, near Hammersmith-gate.

WANTED, a SITUATION, by a Person who has a practical knowledge of building. He can take out quantities, estimate, measure up work, draw plans, and make specifications.—Address, H. H. No. 52, Judd-street.

TO BUILDERS AND OTHERS.
WANTED, by a Young Man, who has for some years filled the office of General Clerk and Bookkeeper in a Builder's office, a similar SITUATION. Good references can be given.—Address, O. P. Swallow's Newspaper Office, Everett-street, Russell-square.

TO BUILDERS AND PLUMBERS.
WANTED, a SITUATION, by a respectable lad, aged 16. Can write a good hand, and make himself generally useful.—Address, L. M. 18, Chandos-street, Covent-garden.

TO ARCHITECTS AND OTHERS
WANTED, by a Gentleman, aged 26, an ENGAGEMENT with an architect or others, as DRAUGHTSMAN and general ASSISTANT. The advertiser is rapid and skilful, acquainted with theoretic and practical architecture, a good colourist, and familiar with office practice; speaks French and Italian, knows the continent well, and would prefer an engagement abroad. Salary not so much an object as an engagement in an office transacting a large business.—Address, X. Y. Z. 3 Melbourne-square, Brixton, London.

TO ARCHITECTS AND BUILDERS.
WANTED, an ENGAGEMENT (temporary or otherwise), by a Gentleman who is thoroughly acquainted with practical building, can make fair and workable drawings, write specifications, measure, and estimate, and is fully capable of conducting a business under the direction of the principal.—Address, S. A. at Mr Halifax's, 315, Oxford-street.

TO CARPENTERS, BUILDERS, AND OTHERS
WANTED, a SITUATION as SHOP or BUILDING FOREMAN. Has had twenty-five years' practice as shop and building foreman, and has been upwards of eight years with his present employer. He can make out working drawings. References good.—Address, A. B. Mr. J. Shuter, 41, Holly-street North, Dalston.

TO MASONS.
WANTED, by a Young Man, a SITUATION at the BENCH, or partly in the office and partly at the bench. The advertiser is quick at accounts, having filled a similar situation before. Wages not so much an object as a constant situation.—Apply to Mr. SMITH, care of S. E. 4, Grove-terrace, St. John's-wood.

WANTED, by a DRAUGHTSMAN, a SITUATION in a Civil Engineer's or Architect's Office. No objection to go abroad.—Address, J. W. B. Brassington's Library, Kensington.

WANTED, by a Young Man, aged 23, a SITUATION as TIME-KEEPER and MEASURER in a Builder's or Timber Yard; is a good writer and accountant, served his time to a builder, and is willing to make himself generally useful.—Address, C. C. 4, Tufnel's-park West, Camden-road.

WANTED, by a Practical Man, a Situation as CLERK of WORKS, or PRINCIPAL FOREMAN. Has no objection to the country. Good reference.—Address, G. H. J. 56, Charlwood-street, West Pimlico.

TO BUILDERS AND HOUSE DECORATORS
WANTED, by the Advertiser, who is a good Writer, Grainer, Pin and Decorative Painter, and Paperhanger, a constant SITUATION as FOREMAN or otherwise.—Address, stating wages, to G. A. Office of "The Builder."

TO BUILDERS AND OTHERS.
WANTED, by a Young Man, with thirteen years' experience with a builder and architect, a SITUATION of the like capacity, or to manage an estate. Thoroughly understands measuring, taking out quantities, making finished and working drawings, specifications, &c. Reference to present and former employers.—Address, A. S. 14, Thornhill-place, Caledonian-road, Islington. Country not objected to.

TO PAINTERS, DECORATORS, BUILDERS, &c
WANTED, by a Young Man who has had the management of a business in the South of England, a SITUATION as FOREMAN, or otherwise; he has a thorough and practical knowledge of the painting, glazing, and decorative business, and is a good writer and embosser. Unexceptionable references given.—Address, J. M. G. 80, Great College-street, Camden-town.

TO PAINTERS, BUILDERS, &c.
WANTED, by a Young Man, aged 21, a SITUATION as GRAINER, who would have no objection to fill up his time with painting, if required. Wages moderate.—Address, Y. Z. 51, Queen-street, Camden-town.

TO BUILDERS
WANTED, by a Young Man, aged 30, a SITUATION as GENERAL FOREMAN. Has a thorough practical knowledge of the whole of the building business; by trade a Joiner. Can produce good references from architects, and where last employed, where he has had the whole management of the business.—Address, B. W. 14, Trinity-square, Southwark.

TO STONE POTTERS AND OTHERS.
WANTED, by a practical Young Man, a SITUATION as WORKING FOREMAN or JOURNEYMAN in a STONE POTTERY, having been nine years in his last situation in the Vauxhall; having a thorough knowledge of the stoneware trade in all its branches, mixing both clays and glazes. No objection to go abroad.—Address, A. B. 3, Dean's Cottages, Dunstan's-road, Kingsland-road, London.

TO BUILDERS AND PLUMBERS
WANTED, by a steady, active Man, a SITUATION as WORKING FOREMAN of PLUMBERS. Good references can be given, and country not objected to.—Address, W. W. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS
THE Advertiser, who is a good Draughtsman, and has a good knowledge of construction, can estimate and measure accurately, and be well recommended by his present employer, wishes for a SITUATION.—Address, H. W. J. care of Rogers and Clark, Booksellers, Newmarket.

TO PAINTERS, BUILDERS, &c.
THE Advertiser wishes for a RE-ENGAGEMENT as FOREMAN of PAINTERS, &c.; can measure, give estimates, &c. References as to character and ability from present employer.—Address, A. Z. 37, Ashford-street, Pitfield-street, Hoxton.

THE Advertiser, aged 27, who has been three years a builder's clerk, wishes to engage himself with a Surveyor for two or three years, where he would have the advantage of gaining a practical knowledge of the profession. He is a good arithmetician; also possesses a knowledge of geometry, &c. A small progressive salary expected. Respectable references.—Address, A. B 20, Bingfield-street, Islington.

TO NOBLEMEN, ESTATE AGENTS, RAILWAY DIRECTORS AND OTHERS.
FOREMAN of PAINTERS, &c.—A Young Man, having held a situation these last four years upon a gentleman's estate, conducting the plumbing, painting, and decorating, is desirous of another ENGAGEMENT. Is practically acquainted with the trade in general, and can give unexceptionable reference from his last situation. Address, A. B. 10, Roehampton-street, Vauxhall-bridge road, Pimlico.

DRAUGHTSMAN, Engineering and Mechanical.—The advertiser, who has worked for some of the first civil engineers in London, and latterly for 4 years on the Eurolment Office, wishes for a RE-ENGAGEMENT.—Address, G. S. L. 10, Windsor-terrace, Pimlico.

A WORKING or GENERAL FOREMAN, PLUMBER, PAINTER, and GLAZIER, is desirous of a RE-ENGAGEMENT. Undeniable references.—Address, J. EUSTACE, 44, Cockcraft-terrace, St. John's wood.

TO ARCHITECTS.
A YOUNG MAN, who has been some time in the profession, and is a good Draughtsman, is desirous of an ENGAGEMENT.—Address, "DELTA," Messrs. Wilkinson's, 49, Coleman-street, City.

AN ARCHITECT who is a good Draughtsman (both Geometric and Perspective) can take out quantities, survey and levels, and thoroughly understands construction and the quality of building materials, wishes for an ENGAGEMENT. Locality unimportant.—Salary moderate.—Address W. F. E. Office of "The Builder."

A THOROUGH practical and experienced SHOP FOREMAN of JOINERS will be OPEN to an ENGAGEMENT in a first-rate house from this time. Reference to the works where now engaged.—Address, W. L. Crown and Sceptre, Brixton-hill.

TO MASTER BUILDERS AND PAINTERS.
A FIRST-RATE WORKMAN wants Twelve Months' constant EMPLOYMENT as GRAINER, &c. Country preferred. A little plain work not objected to.—Direct, E. H. No. 3, Clarence-gardens, Regent's-park.

TO BUILDERS AND CONTRACTORS
AN experienced Man, who has half his time disengaged, wishes to employ it in taking out Quantities, Estimating, Measuring, and Superintending Works for an Architect or Builder. References good; terms moderate.—Address, ALPHA, Post-office, Albion-terrace, Canonbury, Islington.

TO CONTRACTORS, BUILDERS, &c
AS PRIME COST, MEASURING CLERK, or ACCOUNTANT, by a Young Man, twenty-five years of age, has had several years' experience, is an excellent penman, and can produce good testimonials. Salary moderate. Address A. B. 71, Nicolas-street, New North Road, Hoxton.

TO BUILDERS.
A SHOP or GENERAL FOREMAN; of extensive experience, wishes a RE-ENGAGEMENT in town or country. Unexceptionable references for character and ability.—Address, ALFRED, Office of "The Builder."

A YOUNG MAN, aged 24, who is practically acquainted with building and builders' accounts, is desirous of meeting with an ENGAGEMENT in a builder's office. Salary no object.—Address, J. B. 3, Homer-street, Hercules-buildings, Westminster-road.

PARTNERSHIP.—A Gentleman, possessing a taste for Architecture and the Fine Arts, with business habits, may be admitted to a share in a manufactory of articles used in park and garden architecture, one of the partners in which has lately retired. The concern is one of the first of its kind; the connections are of the highest class, and the profits good. A capital of 2,000*l.* or 3,000*l.* will be required.—Letters may be addressed to S. P. at Peck's Office-house, Fleet-street.

JOHN BAZLEY WHITE and BROTHERS, MARBLE MERCHANTS,
MILLBANK-STREET, WESTMINSTER.
Marble of all kinds and of best quality, in block and slab. Marble mortars, &c.

SERPENTINE.—The Lizard Serpentine Company manufacture and also sell stone in block or slab. The stone now raised is from the lower beds, and is sound as the so cured marbles with which it competes in price—Chimney-pieces, columns, tanks, &c. &c. on view at the show-rooms, 30, Surrey-street, Strand.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Hemlock-street North, City-road, for the sale of CHIMNEY-PIECES, and other articles useful architectural and ornamental to Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 25, 1855. C. ADENEY, Secretary.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry-owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge

TO THE MARBLE TRADE.

MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.

SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marbles, suitable Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

ARCHITECTURAL and ORNAMENTAL DECORATIONS. Architects and the Trade are respectfully invited to inspect specimens of the

PATENT VITREOUS MARBLES and CONSOLIDATED GLASS, applicable for Piers, Pilasters, Chimney-pieces, Shop Fronts, Table Tops Panels, &c. &c.—Show-rooms: 40, Broad-street-buildings, City; 4, Russell-place, Fitzroy-Square; 112, New-street, Birmingham, &c. &c.

PORTLAND STONE.—NORTON and WHITE beg to solicit the attention of the Building Trade generally to their extensive STOCK of PORTLAND STONE, comprising every useful size, which they are now offering upon most advantageous terms. York Landings, Paving, Sills, Slabs, &c.—Address, 24 Wharf, Harrow-road, Paddington.

BRINE, BROTHERS, Marble and Stone Merchants, Great Northern Wharf, Canal-road, King's-cross, London, continue to have in stock all descriptions of Marble, in Block and Slab, at the lowest prices.—N.B. A good stock of Statuary Slab on hand, suitable for shelves.

IMPORTANT to MASONS and BUILDERS.—A. BREWSTER begs leave to inform Builders and the Trade that, by an improved system of machinery, he is enabled to EXECUTE all kinds of MARBLE and STONE TURNING at considerably reduced prices. Also to supply Stone Bored Chimney-pots, of superior workmanship, from 10s. 6d. each.—Depôt 8, Market-street, Millbank, Westminster.

N.B. Country orders punctually attended to.

YATES'S MARBLE WHARF, Crescent-road, Millbank.—M. YATES begs to inform the friends of her late husband, W. Yates, and all persons connected with the Marble trade, that the business of the above premises will be carried on as usual under the superintendence of an able manager. A large quantity of Marble Slab; also a good stock of Chimney-pieces, and other marble works.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS,
BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

HAYTOR GRANITE COMPANY.—Incorporated by Royal Charter. London Agent, C. HOAR, 4, Millbank-row, Westminster. Haytor Granite was used exclusively in the Nelson Monument, Trafalgar-square; King William Monument, City; and extensively for the plinth and steps at the Royal Exchange, and terraces at the Crystal Palace, &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street, Manager—JAS. J. TRATHAN, Liskeard

This Granite is selected for the New Westminster-bridge

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Office, 240, High-street, Southwark, near the Townhall.

CAEN STONE.—About Twenty Tons of Small Blocks and Pieces, now lying at Lett's Wharf, to be sold at a moderate price. Terms, cash.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, and Co.), Caen-wharf, Rotherhithe, London, General Stone Merchants and Quarriers, continue to supply from their Wharf as above, CAEN, AUBIGNY, PORTLAND, and YORKSHIRE STONE

MARKET-WHARF, REGENT'S-PARK-BASIN -WEST-END DEPOT, for York-hire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. SCOLES and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be cleared at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

FREESTONE.—Architects and Others are reminded that they can obtain the CASTERTON FREESTONE, in Blocks of any portable size, at the Quarries, or at the Railway Stations of Stamford, Wansford, Peterboro', or Tallington, and which, from its price, and the facility with which it is wrought, offers immense advantage to the purchasers.—Apply to FRAS. and OCTS. SIMPSON, Stamford.

N.B. Specimens in plain blocks, and in elaborately carved Bosses, from Ely Cathedral, may be seen, and other particulars obtained, at the Offices of Messrs. PITFIELD, SIMPSON, and SONS, 29, Saville-row, Burlington gardens, London. May, 1855.

THOMAS TILNEY, YORKSHIRE STONE MERCHANT, Tanfield-place, Leeds.—To Builders and Buyers of the Best Quality.—Direct from the Quarries in truck-loads of five tons. Paving, Landings cut out to sizes, Steps, Copings, &c. &c. supplied on most advantageous terms by railway, and with despatch. Prices sent on application.

YORKSHIRE STONE.

GEO. VINT and BROTHERS beg respectfully to inform Architects, Surveyors, Contractors, Builders, Masons, &c. that they can supply to any extent all kinds of YORK STONE of the very best quality direct from their Quarries, to all Railway stations and Ports in the Kingdom, on the most reasonable terms.—GEO. VINT and BROTHERS will gladly forward prices by post on application.—Address, Idle, near Leeds.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price Lists for Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Somerset House, Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BANGOR SLATES, of all sorts and sizes; SLABS of all dimensions, and of superior quality.—For prices and particulars apply to J. EASTWOOD and SONS, Surrey Canal-bridge, Old Kent-road. Export orders supplied promptly.

TO ARCHITECTS, BUILDERS, IRONMONGERS &c.

ENAMELLED SLATE CHIMNEY-PIECES, of elegant designs and superior workmanship, in great variety, at prices from 25s. to 7 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-grounds, King's-road, Chelsea, Middlesex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in prices in the shape of a large and well-assorted disposal to the TRADE. His best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 40, Upper Belgrave place, Pimlico.

SLATING, 22s. per square, net cash on completion.—T. B. HANNAFORD, Slate Merchant and Slater, Trevor's Wharf, Ratcliff Cross, is enabled to execute Slating to any amount in Town, on the Builders of position, at the above low price. Slate Paving, 1½ inches thick, planed one side, and squared ready to lay, 4d per foot super.

LLANGOLLEN FLAG and SLATE COMPANY.—The present proprietors of the Quarries, formerly worked separately by the Llangollen Flag-Stone Company and the Llantysilio Slate Company, are now prepared to supply architects, contractors, builders, masons, and others with FLAGS, SLATES, and SLABS of every description; Cisterns, Chimney pieces, Baths, Filters, Larders, Mangers, Ridging, and every other article made of this beautiful material, all of superior quality. The Llangollen Slabs from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices. Price-lists and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street-place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, Wharf, South Wharf-road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.

Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.

N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

VALUABLE QUARRIES, &c. in FORFARSHIRE, TO BE LET.—To be let for such number of years as may be agreed on with entry at Martinmas next, the extensive and well-known FLAG or PAVEMENT and FREESTONE QUARRIES of LEYSMILL and BONDER, belonging to W. F. Lindsay Carnegie, Esq. and situated on the line of the Arbroath and Forfar (Aberdeen) Railway, and running to the Leysmill Station, about five miles from the Seaport Town of Arbroath. And along with them will be disposed of the whole MACHINERY, comprehending six Stone-Planing Machines, with the Polishing Apparatus; two steam Engines, &c. now in active operation. The FARM of LEYSMILL, extending to 175 acres, or thereby, of arable land, all enclosed and thoroughly drained, and in a high state of cultivation, and with an excellent steading of farm offices, may, if desired, be let along with the Quarries.

The Leysmill Quarries have been long established, and worked upon a large scale by the present proprietor; and an extensive trade is now carried on from them both in the home and export market, for which there are extraordinary facilities. There is a railway-siding at the quarries, and direct railway communication is afforded to all parts of the kingdom. The neighbouring harbours of Arbroath and Dundee are also accessible by direct railway conveyance. The FLAG or stone is shown at home and abroad as Arbroath Pavement, and the freestone is of the first quality, and can be raised of great size. These quarries were the seat of the late Mr. Hunter's stone-planing machinery, now in such general use. Their produce is specially adapted for working by machinery; and a new invention of Mr. Hunter's, for sawing blocks at a high rate of speed, recently patented, and when premises to be of great importance to the planing-machine, may be seen in operation there close to Leysmill railway station.

To capitalists wishing to embark in the stone trade, or to a company which might be formed for the purpose, this affords an opening which well deserves attention.—For further particulars apply to JAMES LESLIE, Civil Engineer, George-street, Edinburgh; Messrs. LINDSAY, MACKAY, and HOWE, W.S. Edinburgh; or to Messrs. DOUGLAS, MACDONALD, and BLACK, Writers, Arbroath, the last of whom will give directions for showing the quarries, and in whose hands sealed offers may be lodged on or before the 1st of SEPTEMBER next.

Kimblethmont, near Arbroath, 20th June, 1855.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 2½ inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage Roads: 3s. to 6s. per square yard. Railway Arches made waterproof, 2s. per square yard. Every description of pavement laid down, and the work guaranteed. Apply to Messrs. WRIGHT and BROWN, 32, Bucklersbury, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS.—The head of every house built upon the Waddington Estate, of the value of 5 l. per annum, will be entitled to a Free First-class Railway Ticket; and of every house of the value of 3 l. per annum, will be entitled to a Free Second-class Railway Ticket, for fourteen years. Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every assistance for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Lunes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's station.

LADDERS, BARROWS, &c. for SALE or HIRE.—GEORGE ELL, Wheelwright, &c. 3, Tottenham-court, New-road, opposite the Hampstead-road, and corner of Pratt-street, Caledonian-road, has on hand at all times a large Stock of Excavators', Brickmakers', and other Barrows, Builders' and Painters' Ladders, Trestles, Steps, &c.—A price-list sent on application to 3, Tottenham-court, Waggons, Carts, &c. on the shortest notice.

HOSE PIPING.—WAITHMAN'S PATENT FLAX HOSE PIPING will sustain a greater pressure, is lighter, less bulky, will wear longer and is about 60 per cent. cheaper than the leather hose pipe. Manufactured only by WAITHMAN & CO. Bentham, Lancaster.

No. 1 quality, inched diameter, and price per yard.

¼	⅜	½	¾	1	1¼	1½	2	2½	3 inches.
9d.	11d.	1s.1d.	1s.3d.	1s.5d.	1s.7d.	1s.9d.	2s.	2s.3d.	2s.9d.

Super-extra stout quality.

2	2½	3 inches.
2s.	2s.3d.	2s.6d.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

¾	1	1¼	1½	2	2½ inches.
9d.	10d.	1s.	1s.3d.	1s.6d.	per yard

The hose is Burnettized at an extra charge of 3d. per yard. Union Joints Branch Pipes, and Jets, are also supplied.

WOOD-CARVING and FRET-CUTTING.—T. HEWETSON, Wood-Carver, and Fret-Cutter, 5, Hatton-garden, London, begs to inform Architects, Builders, Ironfounders, Pianoforte Makers, that he is prepared to execute any kind of Architectural or Ornamental work, with accuracy and despatch.—T. H. particularly solicits the attention of Pianoforte Makers, having had many years' experience in ornamental pattern making. Estimates furnished.

TO ENGINEERS, MACHINE MAKERS, AND OTHERS.

CHARLES MACINTOSH and CO., Patentees and Manufacturers of the VULCANIZED INDIA-RUBBER in all degrees of elasticity, recommend this material as can be of sustaining the action of hot or cold water, gas, steam, acids, and grease. It is used extensively for valves in marine and land engines railway buffers and springs, washers for pipe joints, hose and tubing; also for gas-holders, and pumps, alkali cisterns, &c. &c. Articles, moulded or otherwise, made to any size or figure.—Address, 3, Cannon-street West, London; and Cambridge-street, Manchester

HARD RUBBER, as a Substitute for Ivory, Ebony, &c. Also, India Rubber Packing, Tubing, Mill Straps, and Printing Blankets. For sale by DODGE, BACON, and CO. 49, Poultry-street, sole Licensees of GOODYEAR'S Patent for India Rubber Combs, and Importers of CROCKETT'S Patent Leather Cloths.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, ENGINE-PACKING, both round and flat, and SOCKET-RINGS, for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables.

Driving dresses of super or make, and improved Vulcanized Rubber Sup. Hoppes for ditto.

Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimen-and patterns commencing at is. per foot super, together with particulars of its cost and adaptation, can be obtained of Mr. BUET, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, holding a large number of patents relating to the construction and reparation of the permanent way, are at all times ready to communicate on the subject, and to grant Licenses for their use. To all the facilities thus afforded to companies to negotiate for a number of inventions, much trouble and change of litigation is avoided. The Company undertake arrangements for licensing new inventions on the subject before the public, upon terms advantageous to the proprietors of patents. Applications may be made to CHARLES MAY, F.R.S. the Manager; or to

WILLIAM HOWDEN, Secretary.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PATRON H.R.H. PRINCE ALBERT.

ROYAL POLYTECHNIC INSTITUTION. Under entirely new management.—Fifth Course of Monday Lectures, specially addressed to the Industrial Classes, to which they and their families as well as Afternoon and Morning or Evening, on payment of Sixpence each, on producing a Ticket signed by the Foreman or superintendent of the Works to which they may belong. The Next Lecture of this Course will be on Monday Evening the 30th inst. on Coal and Coal Gas, by Lewis Thompson, Esq. The Russian Infernal Machines, Dissolving Views of the late Battles, Diorama of San Sluck, &c. &c.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates can turn it. It is entirely free from any poisonous or pernicious property. Those direful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster Decorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale and Retail Colourmen in Original Packages, each cask stamped HUBBUCK, LONDON—PATENT, and if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s 6d.

Prepared only by W. J. STENT, Warminster.

London Agents: Messrs. GEO. and THOS. WALLIS, 64, Long-acre. Agent for Ireland: Mr. S. BOYD, 46, Mary-street, Dublin.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and Co. with pleasure announce to their Friends and the Public that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cement, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used in them as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, East-street, Blackfriars, or Middle Wharf, Portland-yard, Westminster. Manufacturer of Roman, Lias, and other Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the Natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not warrant in damp situations. Accounts of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PARENT'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well known hard Stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent.—KNIGHT, BEVAN, and STURGE, manufacturers only of first-class quality, for the home and foreign trade. Portland cement is manufactured at these works with special reference to its destination, whether for stuccoing, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-drying Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Steel street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (their patent), and all other Cements in use for building purposes, 12, Ely-place, London.

NEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL, Light and Dark, equal to any in Manufacture also, and Dealers in Plaster, Paris White, Stone, Hair, Lime, Lime, Lathe, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rolling, Paints, Stucco, &c. Marble Merchants and Importers of Carrara.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by J. HILDEN, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the quarry, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

PATII CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in any situations, is perfectly hydraulic, of a regular and warm colour resembling Bath stone. CHARLES RICHARDSON, South Wharf, Paddington.

11, George-yard, Lombard-street, City.

WILMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent.—ROMAN and PORTLAND CEMENT of the first quality. Orders to these works. Also BRICK and KILN BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Kent, as above.

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS.—OLDHAM and TATHAM are prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland and Lias or Bath Cement, both of which will be found of superior quality, and will be improved by a double admixture of two more parts of sand to one of cement, IO and 7 bushels can run to the ton; any wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

GREY STONE LIME WHARFS, 12, UPPER GROUND-STREET, Blackfriars (Surrey side), or NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities at the above wharfs, or per barge direct from the kilns in Sittingbourne, Gouldham-hall Grey Stone Lime Works, on the Medway, near Rochester, March 31, 1855.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stuccо than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality.

SEYSSELS, FAVIERS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 20, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another Wharf adjoining, especially to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

BLUE LIAS LIME.—J. EASTWOOD and SONS take this opportunity of informing their customers that they have now BLUE LIAS LIME always in stock, ready for delivery, at Belvedere-road Lambeth

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and will not VEGETATE or RUB OFF. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers. Office, 4, George-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "Remarks on the Press," page 501, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Covings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbench, Cambridgeshire, begs to offer pantiles at 50s. per 1,000; floor bricks and 9-inch pavings, at 40s. per 1,000; 9-inch paving, at 30s. per 1,000; 9-inch paving, at 75s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that may be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increase I weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull by Messrs. BLUNDELL, SPENCE, and Co., white ground and dry, by Messrs. T. B. MORLEY and CO. and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wellington-street, 63, King William-street, City; FREDERICK BRADBURY, Wholesale and Retail Agent, 5, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 8, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs R. ANDERSON and Co. Timber-merchants; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants, Builders, contractors, and others supplied with every description of building material at the lowest market prices.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-stock, Pitsides, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, King's-road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Stourbridge Fire Goods, &c. of all descriptions, and of best quality.—WOOD and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent.—Mr. J. UNWIN, Private Residence, 59, Nelson-square, Blackfriars-road.

A SECOND-HAND ONE-HORSE BRICK CART, FOR SALE, at J. BARNES'S, Wheelwright and Manufacturer of every description of Barrows, Railway Trucks, Ladders, Machines, &c. 2, York-place, Pentonville-hill

BRICKS.—Builders wanting Bricks of good colour, are solicited to call on E. PARKS, Lewisham, and see the quality at Low prices. Cartage within six miles on the most reasonable terms. Red facing bricks at 18s. All kinds of tiles, paving bricks for oven building, salt glazed stone pipes manufactured; also all kinds of red pipes and pots.—Application by letter punctually attended to.

FOR IMMEDIATE SALE. — FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL TRICKETT has received a large consignment of the above goods for sale.—Apply on the premises, Stone-wharf, Isle of Dogs. Dealers and large consumers liberally dealt with.

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, in 3 feet lengths.—Apply to St. JOHN HEWITT, Redhill Works, Southampton.

TO CAPITALISTS, SPECULATORS, BUILDERS, and BRICKMAKERS.—TO BE DISPOSED OF, a large BRICKYARD, situate near one of the principal towns in the midland counties, capable of producing more than two millions of bricks, of good quality, weekly. As the neighbourhood is increasing with a degree of rapidity witnessed in scarcely any other part of the kingdom, the opportunity is a favourable one. Both machinery with steam power and hand-labour employed.—Apply to Mr. W. WHITEHEAD, Auctioneer and Estate Agent, 2, Albert-street, Nottingham.

BRICK and TILE-MAKING MACHINERY for all NATIONS, from 15l. to 250l. each.—J. S. NORTON, Engineer and Ironfounder, Union Works, New Park-street, Horsleydown, Surrey, near Southwark-bridge, London. Every description of clay mills, crushing-rollers, horse-gear, travelling and other cranes, &c. &c.—List of prices and catalogues may be obtained at the Works. Licenses granted to manufacture the tubular roofing-tiles.—A quantity of hollow bricks on sale.

BRICK-FIELD. — About 3½ ACRES of WHITE and RED EARTH, of excellent quality, with Kiln, situate on the Foxhall road, Ipswich, Suffolk, TO BE SOLD or LET.—Inquire of S. B. JACKAMAN, Esq. Solicitor, Ipswich.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast, screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by HANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the accustom and other Filters and Trades. These filters, at one penny, three and four guineas each, yielding 60, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are portable, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

PURE WATER.—The attention of Boards of Health, Water Companies, Engineers &c. is particularly requested to a newly-invented METHOD OF CONVEYING WATER, which possesses most important advantages. It can be made strong enough to resist any pressure, it is comparatively flexible, easily laid, has great power of resisting the effects of frost, and what is of still higher consideration, is perfectly innocuous. This combination of desirable properties is produced by lining leaden pipes with gutta percha. Further information may be obtained on application to the Patentees, Messrs. STOCK and SON, Lead Works, Birmingham; or to the Gutta Percha Company, 18, Wharf-road, City-road, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, &c.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 8s. Transparent blinds in great variety. Engravings, with prices and designs to builders and the trade, forwarded on application, post free.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA-COTTA to M. H. BLANCHARD, late of Coade's Original Works, and successor to them in the manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornment of our noblest buildings. Groups, Statues, Vases, Fountains, and Architectural Embellishments, at prices and quality that will defy competition, and will be found to be a different material to that now being imitated by puffers and mannfacturers, with only three or four years experience, and without practical knowledge. Some of the works recently completed by M. H. B. can be referred to the whole of the country, published in the Official Houses, as the gigantic Duke of Sutherland's; also Tottenham and Kingsland Churches, the terrace to the Caen-wood Chapel, consisting from 4000 to 5000 feet cube; the colossal Britannias, 12 feet high, at the County Fire Offices, Cornhill and Lombard-street; the Arms, with the allegorical group, at the Kent Mutual Insurance, Queen street; and other works elsewhere, too numerous to mention. A large stock of newly-designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

TERRA-COTTA.—Statues, Statuettes, Vases, Terms, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Broad-street, Pallington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Nigerni Court. The statues of Australia, Venus di Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and red cement composition. Since the execution of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

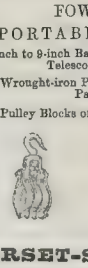
FOWLER'S
IMPROVED FARM AND COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, from £1 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ships, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

ON SALE SINGLE PUMPS, BARRELS AT SHORTEST FOR HAND STEAM



AND HIRE, AND DOUBLE 3 in. to 15 in. to any depth, NOTICE, OR POWER.

FOWLER'S
PORTABLE PUMPS,

3-inch to 9-inch Barrels, Plain or Sliding Telescope Suction.

Wrought-iron Pails, Galvanized or Painted.

Pulley Blocks of every description.

BENJ. FOWLER, WHITEFRIARS-ST. FLEET-ST. **NOT DORSET-ST.** as formerly.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, moved by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, mines liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic rams for deep wells.

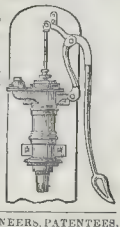
PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices

N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per Doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.



TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,

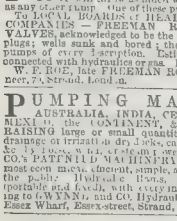
which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin street, London,
Manufacturers and Patentees.

TO NOBLEMEN GENTLEMEN, ENGINEERS, PATENTEES, INVENTORS, MECHANICS, &c. &c.



WILLIAM ANTHONY ROWLAND,

Hydraulic Engineer, Plumber, Glazier, &c. Metallic Wire Manufacturer, No. 5, Seagate street, near the Royal Hotel, Chester, HEREBY GIVES NOTICE that he has PATENTED ENGINES, MACHINES, APPARATUS &c. &c. He will be happy to arrange with those that the EXHIBITING of the above in MODELS, DRAWINGS, &c. and to give every particular relating thereto; also all kinds of Brass or Iron Work, &c. used for water, gas, steam, &c. He respectfully invites the attention of Inventors and Patentees to favour him with Agencies for their various articles, and assures them the strictest attention will be paid for the benefit of their patents &c. The greatest care will be taken of all articles entrusted to him. Catalogues of patents and useful articles will be kept at his office for inspection. Tracings of designs will be sent on application. Gas, steam, and zinc work; baths, pumps, water-closets; beer, fire, and garden engines; spirit and water fountains

---

STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 76, Strand.

To LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES — FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or hose-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with hydraulics or gas. Pumps let on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 76, Strand, London.

PUMPING MACHINERY for AUSTRALIA, INDIA, CEYLON, SOUTH AMERICA, MEXICO, the CONTINENT, &c. All persons desirous of RAISING large or small quantities of WATER, for works of drainage or irrigation, dry docks, canals, coffer-dams, water works, &c. &c. are invited to inspect one of SIR SAMUEL BROWNE and CO.'S PATENTED MACHINERY for the purposes, being the most economical, efficient, simple, and durable ever brought before the public. Hydraulic Rams, Water Supplies, Steam-engines (portable and fixed), with every information, obtained by applying to CLEYNE, and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).

TO CONTRACTORS

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work. Apply to Messrs. MEDWIN, HALL, and CO. Engineers, 92, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Any of these Engines may be purchased

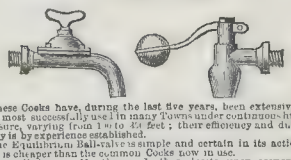
---

TO ENGINEERS and CONTRACTORS.—TO BE DISPOSED OF, a pair of 12-inch PUMPS, with two spur-wheels, connecting-rods, guides, &c. requisite to work the same; also, an 8-horse STEAM BOILER, with fire in centre flue, the whole nearly new. Apply at the Gas Works, Stafford.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.



LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

---

PRIZE MEDAL, CLASS 3.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

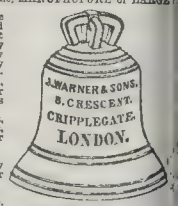
These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 1 to 45 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

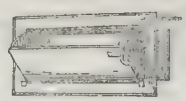
JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret-Clocks, &c. cast for any size, note, or weight, single or in peals.

TUNED BY MACHINERY.



Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and rigged on a new system, which gives a superior tone and facility for ringing.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 58, Blackfriars-road, and 17, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE supplied by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalled quality, combined with cheapness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and Co. Great Northern-wharf, York-road, King's-cross.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage. 3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 48 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

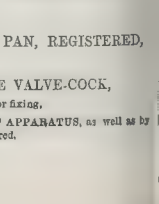
DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 20 per cent of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

CHRIMES' PATENT.

GUEST and CHRIMES, ROTHERHAM, and 37, SOUTHAMPTON-STREET, STRAND, London. Manufacturers of CHRIMES' PATENT HIGH PRESSURE LOOSE VALVE COCKS.

Bateman and Moore's, and Chrimes' Patent Hydrants, or Fire Cocks Improved Self-lubricating and other Sluice Cocks.

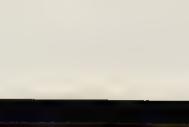


Kirkwood's Tubular Water Closet. Improved Self-acting and other Water Closets.

Siemens' Patent Balance Water Meter.
Pilbrow's Patent Water Waste Preventer.
Morris's Patent Water Supply Regulator.
Rawlinson's Patent Self-acting Drainage Valves.
Lye and Evans's Patent Slide Stop Cocks.
Lowe's Patent Steam Trap, Beggs's Improved.
And all other Articles required for Water-Works Purposes, &c.

LONDON HOUSE.

Mr. THOMAS BEGGS, 37, Southampton-street, Strand, General Depôt for Sanitary Articles, Double Wash and Plug Basins, Hoppers, Urinals, &c. The attention of Architects and Builders is particularly requested to the various appliances for supplying common Closets with Urinals, may be fitted, by Guest and Chrimes, and to Thomas's Improved Urinals for angles and flat walls, as fitted at the King's College Hospital, and other Public Institutions.



Plumbers' Brass Work of every description.

WATER-CLOSET, WITH APPARATUS COMPLETE, FOR 13s. 6d.

DOULTON & WATTS,

LAMBETH POTTERY, LONDON.

DOULTON'S NEW ENAMELLED CLOSET-PAN, REGISTERED,

AND

LAMBERT'S PATENT HIGH-PRESSURE VALVE-COCK,

With Handle, Lever, and Weight, ready for fixing,

Making the most COMPLETE, DURABLE, and EFFICIENT APPARATUS, as well as by far the CHEAPEST yet manufactured.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

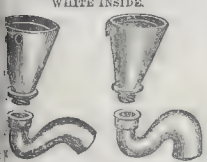
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several used here, which have been in use for upwards of twelve months, giving perfect satisfaction.

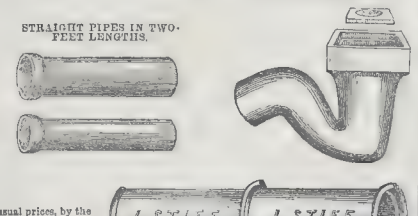
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.



This effective article has not any Crank or Wire to get out of order, and is all complete and resistless, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF,

MANUFACTURER OF GLAZED STONEWARE DRAIN PIPES, WATER-CLOSET PANS, SINK TRAPS, INVERT BLOCKS, AND ALL OTHER ARTICLES SUITABLE FOR DRAINAGE AND OTHER PURPOSES.]



LONDON POTTERY, HIGH-STREET, LAMBETH, LONDON.

IMPROVED YARD-SINK

HALF-SOCKET PIPES, in 2 feet lengths, at usual prices, by the use of which, Drains may be readily examined, and Junctions inserted, in the event of requiring further connections.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's acre, Westminster-bridge, City-road Wharf, City Basin; York-road, Bermondsey, Danvers Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD CLARKS, 24, Wardour-street, Oxford-street. Drawings and list of Prices will be forwarded free on application.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET.

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

UNDERHAY'S PATENT REGULATOR CLOSETS,

for the instant and uninterrupted supply, dispense with Cisterns, Service Boxes, Valves Levers, Cranks, Wires, &c. &c.; much time is saved in fixing, and a better flush of water obtained in use.

Pan, Valve, Self-acting, and Servants' Closets, on this principle, may be seen at the Works. They are very cheap, their efficiency is guaranteed. 5,000 of them have been made, and no instance of failure has occurred.

These Stoneware are cleaner, stronger, and more ornamental, than any other. Many thousands are in use, and greatly approved of.

Manufactured by
CHARLES UNDERHAY and SON,
Brass Founders, [illegible]

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed his new and extensive patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it ensures perfect uniformity in form and size, both of pipes and sockets, the diameter being of a different and better construction to that of any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to enamel, and rendering stoppages in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depot, Britton-street, Chelsea; and at the Pottery.

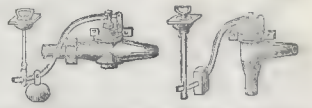
E. and W. STURGE invite special attention to their reduced LIST of PRICES of Drain Pipes, Junctions, Pans, Traps, &c.; also to their Patent Sinks, &c.; Slates of the best quality, wholesale and retail. Country builders and others supplied with all information, on application to E. and W. STURGE, Bridge-wharf, City-road

N.B. The wharf is well situated for carriage by canal boats, or to the railways, to which but a small charge for cartage is made.

January, 1855.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.



DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on a variety of stamps. Also MANUFACTURER of superior Roman Cement and Plaster of Paris, at Leigh Wharf, Bridewell Dock. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET VALVE

No. 7.

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under a continuous pressure of 100 to 200 feet: they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

N.B. No. 7, combined with a DOULTON'S PAN and TRAP, is the CHEAPEST COTTAGE CLOSET yet produced. Price, complete, 13s. 6d. each.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS,

manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW PRESSURE WATER CLOSETS patronised by the Board of Health Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St. Paul's, London

Crown Glass, 18 tables, 30s. per Crate.

ISAAC PARRY'S

GLAZED STONE SEWER PIPES,
RED DRAIN PIPES, AND CHIMNEY-POT MANUFACTORY,
CHURCH-STREET, DEPTFORD, KENT.
ESTABLISHED UPWARDS OF 100 YEARS.

SALES BY AUCTION.

MONDAY, 6th AUG | MONDAY, 1st OCT. 1855
MONDAY, 3rd SEPT. | MONDAY, 5th NOV.

Catalogues and further particulars to be had on application one week previous to each sale. The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE.

In the matter of Queen's Borough Common Inclosure, Isle of Sheppey, Kent.

MR. ROWLSTONE has received instructions to SELL by AUCTION, at the SHIP INN, Queenborough, on FRIDAY, AUGUST 3, 1855, by order of the Inclosure Commissioners for England and Wales, about SIXTY ACRES of valuable FREE HOLD LAND, which will be sold in fifteen lots for the purpose of providing funds for inclosing the said common. The land is situate on the south-eastern side of excellent quarry, suitable for factories, having excellent water communication.—Plans and printed particulars may be had of G. A. DEANE, Esq., 1, Lancaster-place, Strand; Silver Inn, Queenborough, and at Mr. ROWLSTONE'S Offices, Woolwich, Kent.

HAMPSTEAD.—Building Materials; about a Ton of Lead, Four Miles of Copper Wire, 3 cwt. of Gutta Percha, &c.

MR. C. FURBER has received instructions from Messrs. Friend and Hamill to SELL by AUCTION, on the grounds of BELSIZE PARK, leading from Belsize-road and the New Finchley-road, on WEDNESDAY, AUGUST 8th, at ELEVEN for TWELVE o'clock, the excellent and BUILDING MATERIALS, comprising the entire erection of Belsize Turnpike-house, the noble park gates, a good assortment of doors, sashes, rafters, tiles, stable fittings, miscellaneous assortment of brasswork, iron park fencing, large brewing coppers, Venetian and roller blinds, and other harness, and numerous effects, to clear the estate. Catalogues may be had four days prior to the sale, on application to the Clerk of the Works' Office, on the estate; of Messrs. FRIEND and HAMILL, Contractors, 44, Bedford-row; and at the Auction Offices, in Warwick-court, Gray's-inn.

BROADWAY, STRATFORD, ESSEX.—Valuable Building Materials, &c.

MR. W. H. DEAN will SELL by AUCTION, on the PREMISES, on TUESDAY, AUGUST 7th, 1855, and following day at TEN for ELEVEN o'clock each day, the valuable BUILDING MATERIALS and extensive STOCK IN-TRADE, comprising a large quantity of dry yellow and white deals, dry yellow pitch, mahogany, and teak in plank, a part of Dantzic timber, a large quantity of dry cut stuff, fifteen fathoms of lathwood, quantity of oak park pales, oak stakes and rafters, 2,000 scaffold-poles, 2,000 scaffold boards, 1,000 pulleys, a large quantity of scaffold cords, blocks and falls, quantity of ladders, a large quantity of wheeling planks and mortar-boards, fifty carpenters' benches, a powerful pile-driving machine, a set of iron well-boring tackle, several powerful iron derabs, with gear, a nearly new stout built timber-carriage, a nearly new timber-truck, a strong-built stone truck, ten nearly new large tarpaulins, a pair of handsome wrought iron entrance gates, 10 feet by 7 feet, quite new, five pairs of forge bellows, sundry anvils and forge tools, 5,000 Suffolk white bricks, 5,000 Stock and Stourbridge bricks, and a variety of effects.—May be viewed two days prior to the sale, and catalogues had of the Auctioneer, Stratford, Essex.

TO SAWMILL PROPRIETORS, BUILDERS, CONTRACTORS, ENGINEERS, AND OTHERS.

MESSRS. FULLER and HORSEY will SELL by AUCTION, on the PREMISES, Lett's wharf, Commercial-road, Lambeth, on TUESDAY, JULY 31, at ELEVEN, NEW SAWMILL MACHINERY, by Horn, of Whitechapel, and Carr, of Belper, including one double and four single deal frames, one timber frame, capable of cutting a stick 27 inches square, and three circular saftings, complete, and for going either single or double action; excellent set of smith tools. The whole have been made in a very superior manner to the order of Messrs. Routledge, and have not yet been fixed. Also, Two powerful Young Brandah Horses, Three Carts, Harness, Counting-house Fittings, &c.—To be viewed and Catalogues had of the Auctioneers, King William-street, Strand; of WILLIAM PENNETT, Esq. Office, Assistant Bankruptcy Court; and of Messrs. FULLER and HORSEY, Builders, &c. next City

NEW BRIGHTON, within eight miles of the Fleetwham Railway Station, and twelve of the Port of King's Lynn.

MR. J. BECK has the honour to announce he has received instructions to SELL by AUCTION, on MONDAY, AUGUST 6th, 1855, the splendid OAK TIMBER TREES, many of them of large dimensions, and all of first-rate quality, the property of the Most Noble the Marquis of Cholmondeley, all lying within a mile of great roads for conveyance of timber. Three months' credit will be given to purchasers to the amount of £2 and upwards, upon approved security.—Catalogues may be obtained of Mr. W. STANTON, Resident Agent; of the Auctioneer, Smethsham, near Lynn; and posted free on application.—Sale to commence at TWELVE o'clock.

Old-established Steam Saw-mills, with Wharf, abutting on the Portsea Harbour, and situate contiguous to the Portsmouth Town, Docks, and South-Western, and London and South-Coast Railways.

MR. MARSH has received instructions from the proprietor (after a period of fifteen years' occupancy) to SELL by AUCTION, at the MART, on THURSDAY next, AUGUST 2nd, unless previously disposed of by private contract, in one lot, the above FREEHOLD PROPERTY, consisting of the Bath-road Steam Saw-mills, timber yard, and business premises, standing upon freehold ground, large driving wheels and other effects, most conveniently situate at Milton, Portsmouth. The valuable machinery plant, &c. will be included in the purchase. Any party desirous of embarking in the foreign timber trade saw-mills, &c. a more eligible opportunity rarely to be met with. May be viewed on application, and particulars of sale obtained of Messrs. GEORGE ENGLAND, Esq., Solicitor, Portsea; and at Mr. MARSH'S Offices, 3, Charlotte-row, Mansion House, London, where a plan may be seen.

LONDON DOCK ENLARGEMENT.—Important sale of valuable new Building Materials, to be taken down and cleared away by the purchasers.

MESSRS. BROMLEY and SON will SELL by AUCTION, on FRIDAY, AUGUST 3, at TWELVE o'clock, on the PREMISES, (a large PILE of NEW BUILDINGS, known as Cook's Almshouses,) adjoining Shadwell Church, with stately Dwelling-houses in Fenchurch-land, and other places in a count, by order of the Directors of the London Dock Company.—May be viewed two days prior to the sale. Catalogues had of the Auctioneers, 17, Commercial-road, St. George's East.

CAMDEN-TOWN CEMETERY.—BUILDING ESTATE. TO BE LET, on Building Leases for 99 years, very eligible SITES upon the above extensive and good frontages to Camden-street, Pratt-street, and Bayham-street. There is a great demand for houses and shops of the third rate in this locality, which is out-running the supply, owing to the South Western and North London Railway Stations, the Hampstead and Primrose Hill Tunnels, and Parkville. Ground to be applied for to Mr. H. KENDALL, Esq. Architect, 17, Suffolk-street, Pall-mall, East; or to JOHN BANSFIELD, Esq. Solicitor, 5, Craven-street, Charing-cross.

FREEHOLD SITES, WANTED.—Each not less than 20 square feet, in second class streets or roads, where a cash, if payable, in any of the densely populated districts, particularly the Strand, Clerkenwell, Westminster, or Lambeth.—Full particulars to be sent to Messrs. ASHLIN and WHICHCORD, Architects and Surveyors, 7, Gloucester, Westminster Abbey.

KENSINGTON GORE.—Valuable SITES for FIRST-CLASS MANSIONS in the NEW (Prince Albert's) ROAD, KENSINGTON GORE (with frontages to the park-like property purchased by the Royal Commissioners for the Exhibition of 1851 as a site for Institutions connected with Science and Art), may be obtained upon ninety-nine years' lease.—Application at Mr. W. JACKSON'S Office, 10, Kensington Gore.

KENSINGTON PALACE GREEN.—TO BE LET, by PUBLIC TENDER, on WEDNESDAY, the 1st of AUGUST next, on building leases, SEVEN PLOTS of CROWN LAND, part of the late Royal Kitchen-gardens.—For terms and particulars, apply at the Office of Her Majesty's Woods, &c. 1, Whitehall-place; or at the Office of JAMES PENNETHORNE, Esq. 7, Whitehall yard.

LOWER THAMES-STREET.—TO BE LET, by Tender by the Worshipful Company of Armourers and Braziers, on a Lease for Twenty-one years from Midsummer, 1856, the extensive Premises known as the GLOBE-YARD WAREHOUSES, situate on the above street, lately occupied as Custom House. The lessee will be required to pay all taxes and rates, including sewers and main drainage, and all assessments for sanitary purposes and the expense of fire insurance, the land tax being redeemed; and the lease will contain all covenants usual in the Company's leases. Sealed Tenders to be delivered at Armourers' Hall, Coleman-street, on or before the 3rd OCTOBER next where parties making the same are required to attend the following day, at HALF-PAST TWO o'clock the Company do not bind themselves to accept the highest or any other Tender.

JOHN PONTIFEX, Clerk.
5, St. Andrew's-court, Holborn.

TO BUILDERS, PACKING-CASE-MAKERS, and OTHERS.—TO BE LET, situated near the Mile-end-gate, a new roomed HOUSE, spacious yard and workshop, with steam engine, boiler, and saw bench, complete, with every convenience. Rent low; coming in moderate.—For cards to view, apply to Mr. WILLIAM BOWER, Wholesale and Retail Ironmonger, 6, Pleasant-row, Cambridge-road, opposite the Mile-end Station, at the Eastern Counties Railway.

THE CAMP, ALDERSHOTT.—FREEHOLD LAND TO BE LET on building lease, or SOLD, suitable for the erection of a first class hotel, situate on the high ground near her Majesty's Pavilion, the chief officers' huts, and Government barracks. Also, Land for Villas and Cottages now in very great demand. Money and bricks advanced.—Particulars of Mr. T. GOODCHILD, Architect and Surveyor, Guildford.

ON BUILDING LEASE.—TO BE LET, an eligible PLOT of GROUND, having two frontages, making together about 85 feet in length; with a considerable quantity of old materials on the ground.—Apply to W. C. REED, Architect, 64, Old Broad-street, City, where a plan may be seen and an order to view.

FREEHOLD LAND.—To BUILDERS or Parties wishing to build Suburban Residences FREEHOLD LAND TO BE SOLD, on some of the most eligible building estates in the neighbourhood of London, viz:—

FOREST-HILL, Forest Railway.
ST MARGARET'S, near Richmond, South Western Railway.
OAKLANDS GRANGE, Weybridge, Surrey, ditto.
HOUNSLOW, Middlesex, ditto
TOTTENHAM-GREEN, Eastern Counties Railway.
PUTNEY, South Western Railway.
RECTORY ESTATE, EALING, Great Western Railway.
The WADDINGTON ESTATE, ENFIELD, Eastern Counties Railway.
WOOD-GREEN, Green-lanes, Hornsea, Great Northern Railway.
OLD FORD, Stratford, Eastern Counties Railway.

Part of the purchase-money may remain at 5 per cent. interest. Part exchanged in the building of their own residences. Several Plots to be Let on Building Leases. Money advanced to respectable parties.—Apply to Mr. GEORGE MORGAN, 5, Chancery-lane.

TO LET, a very roomy three-story SNUFF MILL, but would be Let for other purposes, with water and steam-power: with also two Cottages, and two Acres of Land. Inquire of Mr SAMUEL GRAY, Millwright, Hackbridge, Carshalton, Surrey.

FREEHOLD LAND for SALE, three or four plots, eligible for building on, situate near the railway terminus, North Woolwich. Apply to JOHN YATES, Baker, &c. Orpington, Kent.

DESIRABLE PREMISES in the CITY of LONDON.—The Trustees of Lord Viscount Sudbury's Charity Estate, in the City of London, are desirous of receiving TENDERS for the LETTING in one or separate leases, for a term not exceeding eighty years, the PREMISES belonging to them, situate in Crutched Friars, Jobs-street, and Cunningham-alley, including the old Poor-house. Sealed proposals, indorsed "Tenders for Premises, John-street, &c." are to be delivered on or before the 1st day of SEPTEMBER next, at the Office of the Architect and Surveyor to the Trustees, Mr FREDERIC LEET, 26, Essex-street, Strand, from whom all further particulars may be obtained, between the hours of TEN and FOUR o'clock.

WESTON-SUPER-MARE, SOMERSET. TO BE SOLD, FOUR ACRES of FREEHOLD BUILDING LAND, on which two houses might be built, in the centre of the town, abutting on the public pleasure-ground, and the only frontage to the sea-road now available, upon the rapidly increasing bathing-place. The Vendor would willingly join a purchaser if wished in expending £20,000, in erections thereon.—Plans, &c. of Mr. G. PHILLIPS, Esq. West-street, Weston-super-Mare.

WHARF and PREMISES WANTED, suitable for the Corn Trade, with House and Stabling attached.—Address, JAY BEE, Barnett's Newspaper Office, Stamford-street.

AUGUSTUS SMITH, Auctioneer to Engineers, Machinists, and the Metal Trades, 295, Blackfriars-road, near the bridge, respectfully invites all persons having Engines, Machinery, Foundries, Plant, or Iron-mongery Businesses disposed of, to forward the particulars thereof for insertion in his REGISTRY-BOOK, for which NO CHARGE will be made unless sales be effected.

TO BUILDERS, MILLERS, STONE MASONS, MACHINISTS, PUTTERS, and OTHERS.—DESIRABLE BUSINESS PREMISES, substantially built of stone brick, with 16-horse power steam engine, patent tubular boiler, and various gun-mongery mill gearing, at Hastings, to any three partners of a safe, active, and enterprising character, TO BE LET or SOLD.—The same property is nearly land, has frontage to the road, and at the back to the sea beach, convenient for access to and from trade vessels, and comprises, a Private Dwelling-house, counting-room or save-office, 21 feet by 8 feet, with cellaring, four workshops, running together 54 feet, and each 20 feet wide, 41 feet by 24 feet: two large store-rooms over the whole building, with strong boarded floors and high-pitched roof. The premises are now in occupancy (all quite new), at Hastings, as sawing mill purposes, and, from its contiguity to the shore, coals may be landed at a low price. To POTTERS and STONE-WARE MANUFACTURERS an eligible opening offers itself, as there is a large supply of fine clay immediately on the spot, which has recently been proved to produce sound salt glazed ware and drain-pipes, specimens of which may be seen. The quantity of land is five acres, 41 feet by 24 feet: two large store-rooms over the whole building, with strong boarded floors and high-pitched roof. The premises are now in occupancy (all quite new), at Hastings, as sawing mill purposes, and, from its contiguity to the shore, coals may be landed at a low price. To POTTERS and STONE-WARE MANUFACTURERS an eligible opening offers itself, as there is a large supply of fine clay immediately on the spot, which has recently been proved to produce sound salt glazed ware and drain-pipes, specimens of which may be seen. The quantity of land in the stone, in blocks of large dimensions, and sand-stone, which can be procured at small cost from the cliffs and stone adjoining these premises by the application of the sawing machinery must be extensively in many branches of uses for building and interior work, the hard stone taking a polish equal to marble.—For further particulars apply to Mr. C. SHARP, East Cliff Sand Quarries, Hastings, Sussex.

PLUMBERS, PAINTERS, and GLAZIERS. BUSINESS TO BE DISPOSED OF.—Apply, by letter only, to Mr. BOWLING, 6, Cathaburgh-place, New-road, near Trinity Church.

MANSFIELD UNION.—Parish of Mansfield.—Survey and Valuation.—Notice is hereby given, that the Guardians of the Poor of the Mansfield Union have received an order, under the hand and seal of the Poor-law Board, requiring them to appoint one or more fit Persons to MAKE a SURVEY and VALUATION, without a map, of all the rateable property in the Parish of Mansfield, in the said Union containing about 1 800 houses, and 7,500 acres of land, or thereabouts, 4,700 acres of which are old inclosure, and the remainder inclosed in 1852 3, and has not yet been assessed, for the purpose of the Poor-rate, according to the Act or Acts of Parliament now in force as to rating and assessments; and that the Guardians will accordingly at their Meeting, to be holden in the Board-room, at the Workhouse of the said Union, on THURSDAY, the 23rd day of AUGUST next, at TEN o'clock in the forenoon proceed to appoint two gentlemen, one to value the landed property, and the other the houses and buildings in the said parish. Gentlemen desirous of undertaking these duties, are invited to forward to me their offers in writing, stating the sum for which they will make such valuation. Each Tender to be sealed, and marked outside "Tender for Valuation," and to be sent to me not later than WEDNESDAY, the 15th day of AUGUST next. Any gentleman canvassing the Guardians, either personally or by letter, will be deemed disqualified, and his Tender rejected accordingly. Further particulars, if required, may be learned on application at my Office, in the Mansfield Union Workhouse or paid, for order of the Board,

WM. E. WODEHOUSE, Clerk.
Union Office, Mansfield, July 24, 1855.

N.B.—The Guardians do not pledge themselves to accept the lowest Tender.

ARCHITECTURAL OUTLINES COLOURED, for Competition or Exhibition, in the first style, by GEORGE CHILDS (removed to 14, Sussex-street, Warwick-square, Pimlico

TO BUILDERS, ARCHITECTS, and SURVEYORS, or any Gentleman wanting WRITING DONE, or SPECIFICATIONS, &c. COPIED, on the most reasonable terms.—Apply to A. B. 24, Princes terrace, Caledonian-road

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper Apply to Mr. S BARLOW, 2, Thames-ditton, Esher-road, between 1 and 3 p.m.; or to Mr. H. B. BARLOW, Office for Patents, Duke-place, Exchange, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in these matters, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 33, Albany-street, Regent's park.

MATHEMATICAL DRAWING INSTRUMENTS JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth, near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. An illustrated price-list will be immediately forwarded, free, on application.

GOLD MEDAL for GEM ENGRAVING.—Monumental Brasses, Ecclesiastical and Corporate Seals, Dies, and Presses, Monograms, and Testimonials, Engraved and Written in Medieval and Modern Styles. Cyphers for Seals or Rings, 2s.; Arms Crest, and Motto on Book-plate, 2s.; Arms Sealing-Wax and Sketch, 3s. 6d.; in Colour, 5s.—T. MORING, Engraver and Heraldic Artist, 44, High Holborn.

ARCHITECTURE, CIVIL ENGINEERING, and SURVEYING CLASSES. Established by Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. for Preparing Gentlemen for Architects, Builders, Engineers, Surveyors, Draughtsmen, Measurers, &c. and for giving EVENING INSTRUCTION in Architectural and Civil Engineering, Practical Geometry, Mechanics, Model Drawing, Perspective Drawings Preparing Specifications, Taking out Quantities, Estimating, &c. &c. Terms—Day Pupils, Three Guineas per Quarter; Evening Pupils, One Guinea per Quarter, which includes Drawing Boards, T Squares, Plans, Drawings, Models, &c. For Prospectuses apply at the Offices, 24, Guildford-street, Russell-square.

THE O'CONNELL MONUMENT in LIMERICK.—At a full meeting of the Committee, convened by requisition, and assembled this day, JULY 24th, at the Council Chamber, Town-hall,

FRANCIS GREENE, Esq. High Sheriff, in the chair, the following resolutions were unanimously adopted:

Proposed by MICHAEL KELLY, Esq. T. C. and seconded by JOHN BARRY, Esq. T.C.—

Resolved, That the Chairman, Treasurers, and Secretaries, Rev. Mr. BRAHAN, Mr. E. J. O'NEILL, and Mr. MURPHY, be requested to communicate with Artists for the completion of the Monument.

Proposed by the Rev. Mr. RYAN, and seconded by Mr. GRIMES—

Resolved—The gentlemen appointed this day at a full meeting of the Committee, specially convened to receive proposals from Artists for the completion and erection of the O'Connell Monument in the city of Limerick, request that Artists will send in proposals for the execution of the Monument, addressed to any of the undersigned—

FRANCIS GREENE, Esq. High Sheriff, Chairman.
Rev. JOHN BRAHAN, P.P. St. Mary's.
FRANCIS JOHN O'NEILL, Esq.
JOSEPH MURPHY, Esq.
MICHAEL QUIN, T.C. } Treasurers.
P. BARRY, M.D. J.P. }
E. O'CALLAGHAN, J.P. } Secretaries.
R. J. O'HIGGIN, O.S.F. }
MAURICE LENEHAN, T.C.

Resolved—That these Resolutions be published in the *Reporter and Chronicle, Times, Art Journal,* and *Builder*, Newspapers

July 24th, 1855.

COMPETITIONS.

PREMIUM of FIFTY GUINEAS for DESIGNS.—The Proprietors of the White Cross Estate, situate at Weston-super-Mare, in the county of Somerset, offer a PREMIUM of FIFTY GUINEAS to the Author, Architect, or other person whose design shall be selected for adoption, for the erection of TWO CHAPELS, either separate or attached, with simple Entrance and Access Gates to the Burial Ground, and Lodge; Offices and Stables, if required; the cost of which is to be estimated separately. The total cost of the whole not to exceed £1,000. The designs with estimates of the costs, accompanied by working drawings and specifications complete with the Architect's name, but with a distinguishing letter, to be delivered to the undersigned on or before the 15th day of AUGUST, addressed to Mr. BULLES, Secretary to the Board, of whom further particulars and a plan of the ground may be obtained. The Architect will be held bound to undertake and complete the works according to the plans for the sum and of no less a time, if required by the Board to do so; but the Board do not hereby themselves to employ the Architect whose designs may be accepted. The plans not approved will be returned.

Guildford, July 26, 1855.

CONTRACTS.

SCINDE RAILWAY COMPANY.—CONTRACT for PERMANENT WAY MATERIAL.—The Directors of the Company are prepared to receive TENDERS for the supply of about 4,000 TONS of RAILS, 1,500 TONS of CHAIRS, 250 TONS of FISH-PLATES, 100 TONS of SPIKES, BOLTS, and NUTS, and WASHERS, and 1,000 compressed WOOD KEYS, and 60,000 CREOSOTED SLEEPERS. Plans and specifications may be seen at the Offices of Mr. T. A. YARROW, the Company's Engineer, Gresham House, Old Broad-street, on and after MONDAY, the 13th AUGUST. Tenders in sealed covers, and addressed to the Directors, are to be lodged at the Company's Offices of the TWELVE o'clock on FRIDAY, the 31st day of AUGUST. The Directors do not bind themselves to accept the lowest or any Tender. By order of the Board,

THOS. BURNELL, Secretary.

Scinde Railway Offices, Gresham House, Old Broad-street, July 27, 1855.

TO BUILDERS.

PARTIES desirous to TENDER for the ERECTION of an ATHENÆUM, to be built at Llanelly, Carmarthenshire, may see the plans and specification at my Office. Sealed Tenders, addressed to me, to be sent on or before the 30th day of AUGUST next. The lowest or any Tender will not necessarily be accepted.

JAMES WILSON, F.S.A. 1, Belmont, Bath.

TO BUILDERS.

PARTIES desirous to TENDER for the ERECTION of a HOUSE, with Coach-house, Stables, and Lodges, to be erected near Newport, Mon., with the Steward's Plans and Specifications at my Office—Seal d Tenders, addressed to me, to be sent on or before the 30th of AUGUST next. The lowest or any Tender will not necessarily be accepted.

JAMES WILSON, F.S.A. 1, Belmont, Bath.

TO ROAD-MAKERS AND OTHERS.

TENDERS are required for PUTTING in SEWERS, and FORMING ROADS, on an estate near the Railway Station at Putney. Apply to Mr. LEE, 29, Golden-square, Architect, between the hours of TEN and FOUR.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—The principal Officers of Her Majesty's Ordnance hereby give Notice, that they will receive PROPOSALS for the following CONTRACT, viz.:—For the Works proposed in the ERECTION of ADDITIONAL OFFICERS' QUARTERS, at the New Barracks, Limerick. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, Lower Castle-yard, Dublin, and at the Royal Engineer's Office at Limerick, and may then personally see, with the terms of contract, upon making a deposit of £1 for the same, which deposit will be returned when the specifications are returned unmarked. The work to be completed on or before the 31st July 1856. The letter of Tenders to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 6th of AUGUST, 1855, and to be marked on the outside "Tender for Work at Limerick."

Office of Ordnance, Dublin, 16th July, 1855.

Royal Engineer Office, Sheerness, July 27, 1855.

TO CONTRACTORS.—CONTRACT for ERECTING additional CELLS and LOCK-UP ROOM, &c. at SHEERNESS.—The Commanding Royal Engineer, Sheerness, gives Notice that TENDERS will be received at the Office of Ordnance, Pall-mall, on or before MONDAY, the 13th day of AUGUST, 1855, from such persons as may be invited to Tender for Erecting such additional Cells and Lock-up Room, &c. at Sheerness. The plans may be seen, and printed specifications obtained, at the Office, between the hours of TEN and FOUR each day (Sundays excepted), till the 11th of AUGUST, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that Sealed TENDERS, addressed to J. WOOD, Esq. will be received at the Office of Ordnance, Pall Mall, London, before the 10th AUGUST, 1855, for the ERECTION of GARRISON CELLS, on the West Face of the Tower of London. The specification and plans for the above service may be seen and Tender obtained, at the Royal Engineer Office, as aforesaid, between the hours of TEN and THREE o'clock, from the 6th to 10th AUGUST, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, London District, 3rd August, 1855.

NOTICE to BUILDERS.—Sealed TENDERS, addressed to J. WOOD, Esq. Secretary, Office of Ordnance, Pall-mall, London, will be received until NOON of FRIDAY, the 17th AUGUST, 1855, for parties willing to CONTRACT for the performance of the WORKS required in ENLARGING the BARRACKS at WEYMOUTH, in the county of Dorset, Exeter District. Plans and specifications for the same may be seen, and forms of Tender obtained, at the Royal Engineer Office, Weymouth Barracks, between the hours of NINE and FOUR, from the 6th to the 16th of AUGUST, 1855, both days inclusive. The Tenders to be endorsed "Tender for Enlarging Weymouth Barracks." The Director General of Contracts reserves to himself the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Exeter, 30th July, 1855.

ORDNANCE CONTRACT. — Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL MALL, London, on or before TUESDAY, the 14th AUGUST, 1855, from parties willing to CONTRACT for EXTENDING the INUNDATION round a portion of the GLACIS of FORT MOUNCKTON (so-called), under the direction of the Royal Engineer, Fort Pitt, Chatham. The plans, &c. may be seen at the Royal Engineer Office, Fort Pitt, between the hours of TEN and FOUR o'clock, Sundays excepted. The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall-mall, London, and endorsed, "Tender for extending the Inundation round a portion of the Glacis of Fort Mouckton, Chatham." Royal Engineer Office, Fort Pitt, Chatham.

NOTICE to CONTRACTORS.—PORT and HARBOUR of LONDONDERRY.—Notice is hereby given, that the following TENDERS for the REPAIRS of the QUAYS, WHARFS, QUAY WALL, and other works, specified in the plans, sections, and specifications deposited in the Office of the Harbour Engineer, 3, Custom-house-quay, Londonderry, on the 21st of AUGUST, Tenders will be received by the Harbour Commissioners at their Office, on or before the 31st day of AUGUST, 1855, for the execution of the said works. The Tenders to be addressed to the Secretary of the Commissioners, at the Custom-house, and marked "Tender for Quays, &c." The Commissioners do not bind themselves to accept the lowest or any of the Tenders.

A. H. STEWART, Secretary.

Port and Harbour Office, 30th July, 1855.

TO NURSERYMEN AND OTHERS.

Solicitor's Office, Guildhall, August 2, 1855.

CITY of LONDON CEMETERY.—The Commissioners of Sewers of the City of London, acting as the Burial Board for the said City, hereby give Notice, that they will meet at Guildhall, on TUESDAY, the 14th day of SEPTEMBER, at TWELVE o'clock precisely, for the purpose of receiving TENDERS for the supply of TREES and SHRUBS for the Cemetery now being formed at Little Ilford, in the county of Essex. Forms of specification, with schedules, by which the prices are to be affixed, may be obtained on application at the Office of the Commissioners, 14, Old Jewry-chambers; or at the Office of Mr. DAVIDSON, Landscape Gardener, 4, Great Russell-street, Bedford-square. JOHN PAL DAW, Principal Clerk.

LIGHTING.—CITY of WORCESTER.—Persons disposed to CONTRACT with the Council and Local Board of Health of the City of Worcester, to LIGHT the CITY with GAS, may receive full particulars on application to Mr. JOHN HILL, Town Clerk, Worcester. The Tenders must specify the charge per lamp per annum, and the number of years for which they are to be made. The Contractor to find lamps, lamp-posts, and all other material and apparatus. Tenders must be sent to the Town Clerk on or before Monday, the 13th day of AUGUST next.

Worcester, 25th July, 1855.

CONTRACTS.

TO BUILDERS.

STEPNEY UNION.—The Board of Guardians are desirous of receiving TENDERS for WORKS proposed to be done, in making certain ALTERATIONS and ADDITIONS at the CHILDREN'S ESTABLISHMENT, CHURCH LANE, LIMEHOUSE. The plans and specification may be seen on application at the Office of Messrs. DUNCH and SON, Surveyors, No. 1, Stepney-causeway, Commercial-road, after the 31st instant, between the hours of TEN and FOUR o'clock. Tenders in the form set forth in the specification, are to be delivered sealed and endorsed, "Tender for Alterations and Additions at the Children's Establishment," at the CLERK'S Office, Relief Workhouse, York-street, Commercial-road East, before SEVEN o'clock in the evening of THURSDAY, the 9th day of AUGUST next, when and where the Tenders will be opened, and the attendance of the parties (or he or some authorised agent or other on behalf of each) required. The Board do not bind themselves to accept the lowest or any Tender. The contractor will have to enter into a written contract, and to give security if required for the due performance of the work.

W. B. BATHURST, Clerk to the Board of Guardians.

July 27, 1855.

LIGHTERAGE.—The SURVEYORS of HIGHWAYS for the Parish of Christ Church, Surrey, are ready to receive TENDERS for the LIGHTERAGE (including wharfage) from 800 to 1,000 tons of BROKEN GRANITE, to be received into the Contractor's craft from the shore of the River Upper Pool of the river Thames, and the craft so taken to be landed ashore in working position, at the Falcon, or metal-boarding dock, at Deptford, as received and delivered. The quantity of granite to be ascertained by weighing the carts, &c. on the contractor's premises, and the material and weighing near, from the public weighing-machine, on the Surveyors' premises, at the expense of the Surveyors' Board. The carts to be brought into the premises only when the Surveyors' weighing-machine is ready for weighing, and the carts to be weighed in succession as they arrive. The granite to be delivered into the Surveyors' craft, the contractor to be responsible for the Surveyors' weighing near while the same is on board the vessel. Tenders to be delivered at the Board Room, at the Vestry Hall, to the Surveyors' residence, 3, Princes-road, Buckingham-road, London, sealed and endorsed "Tender for Broken Granite for the Surveyors' Board," on or before Monday next, the 6th instant. Payment to be made monthly.

CAMBERWELL PAROCHIAL CEMETERY.—To BUILDERS, LANDSCAPE GARDENERS, and OTHERS.—Notice is hereby given, that at the Vestry Hall of the Parish of Camberwell, in the county of Surrey, on WEDNESDAY, the 8th day of AUGUST, 1855, at TWELVE o'clock precisely, the Churchwardens and Overseers of the said Parish will receive TENDERS for the ERECTION of CHAPELS, PORTERS' LODGES, PALL HOUSE, IRON RAILINGS, and other WORKS required in the formation of the IRON FENCES and BOUNDARY WALLS, and for the laying out a part of the said ground with oak fencing; and also for draining and making, laying out, planting, and enclosing the same.

Plans, specifications, and forms of Tender may be seen, and further particulars obtained, on application to Mr. MOFFATT, Jun., at No. 2, Adelaide-place, London-bridge, on and after THURSDAY, the 2nd day of AUGUST, 1855, between the hours of TEN and FOUR o'clock; and all persons proposing to contract for the same are required to attend at the Vestry Hall aforesaid, on WEDNESDAY, the 8th day of AUGUST, 1855, at TWELVE o'clock precisely, when and where the Tenders will be opened in the presence of such persons as may attend.

The Board do not bind themselves to accept the lowest or any Tender, but will enter into contract with the person whose Tender they shall consider most advantageous to the Parish.

GEORGE WILLIAM MARSDEN, Clerk to the Board.

Dated this 2nd day of August, 1855.

Vestry Hall, Camberwell.

TO IRONFOUNDERS AND HORTICULTURAL BUILDERS.

PERSONS desirous to TENDER for the ERECTION of a CONSERVATORY, 100 feet long, 22 feet wide and 22 feet high, to be executed in the Island Garden, Kew, with drawings and particulars at the Office of Mr. DAVIDSON, Architect, 57, Devonshire street, Portland-place. The Tenders to be delivered at the Office of Mr. DAVIDSON, on 11th AUGUST, 1855, at TWO o'clock. No party need apply who cannot produce testimonials of having executed similar works to the satisfaction of the Architect.

TO BUILDERS.

PARTIES willing to TENDER for sundry ADDITIONS and ALTERATIONS at HENLEY LODGE, near Bagshot, Surrey, are requested to call for particulars, by sending their names to Mr. MATCHAM, Architect, Milton-chambers, London-bridge. Tenders to be sent in not later than the 7th AUGUST next.

TO CONTRACTORS.

THE Local Board of Health of Newton Heath is prepared to receive TENDERS for SEWERING and PAVING, &c. Holland-street and Albion-street; being Contracts A and B. The plans, specifications, and forms of Tender may be inspected, and copies obtained, at the Office of Messrs. HAMP and HILL, Engineers, Manchester, on and after the 30th inst. Sealed Tenders, addressed to the undersigned, and endorsed "Tender for Sewering and Paving Works," must be delivered on or before the 16th AUGUST next; and the Local Board will not be bound to accept the lowest Tender.—By order,

S. R. NEEDHAM, Clerk to the Local Board.

Newton Heath, near Manchester, July 25, 1855.

[For remainder of Contracts see next page.]

HOBBS'S PATENT AMERICAN and ENGLISH LOCKS.

Messrs. HOBBS, ASHLEY, and Co. are now manufacturing their celebrated Security and Detector Locks, on the premises recently occupied by Messrs. Chubb, where by the introduction of new and improved machinery they are enabled to guarantee superior workmanship, combined with greater security, at a reduced price than in any locks produced either in town or country.

EVERY LOCK being MADE and FINISHED at the MANUFACTORY, and warranted, all wears their OWN STAMP, without which none are genuine.

These locks can be procured by the trade throughout any respectable Ironmongers in the United Kingdom, or at the Warehouse, 28, New Wharf-road, City-road.

PATENT FIRE and BURGLAR-PROOF SAFES.—MILNE'S PATENT, fitted with HOBBS'S PATENT POWDER-PROOF LOCKS, form the Strongest Safeguards against Fire and Robbery; these are made of various sizes, suitable for the security of Merchants' Plate and important Documents, Parts of Registers, &c. Lists of prices and Inventories can be had on application to HOBBS, ASHLEY, and Co.—Sole Agents and Retail Warehouses 97, Cheapside, and 12, Lawrence-lane, London.

PRIZE MEDAL for SUPERIOR LOCKS &c. WILLIAMSON and J. H. BOOBYER, the Great Exhibition Locksmiths, have the honour to inform Merchants, Bankers, Noblemen, Gentlemen, Builders, Ironmongers, Iron-founders, Smiths, and the Trade generally, that they have registered Venetian Venus, Bramah, Improved, & Co. Bill Locks.

J. H. BOOBYER (late STURCH and BOOBYER), established nearly a quarter of a century for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stonhope street, Clare-market, London.

No. 1851, Class 6, Section 16, BRITISH DEPARTMENT of the PARIS UNIVERSAL EXHIBITION, 1855.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to almost EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of bars of wrought or rolled iron with concrete; so constructed that each bar becomes in effect a beam of artificial stone, with the iron; the strongest possible description of metal, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is commended to the notice of all who are interested in, about, both as an economical fire necessity for additions to and rebuilding, during the great desideratum of fire-proof construction, even to ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 32 York-buildings, Adelphi.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Locks, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat

COPY of MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. CHUBB and SON.

"GENTLEMEN,—We have great pleasure in communicating to you, that the large 'Parkes' Fire-proof Safe' that we purchased from you 12 years ago, from our late premises in New Highstreet, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe after being subject to fourteen hours' intense heat, was opened on the morning of the 2nd of March, the books and papers in their respective keys, and the contents (except a little damage to paper) was that only which existed when it was placed in the safe.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBBS LOCKS, with all the recent improvements; Cash, Deed, and Plate Boxes, of all sizes. Iron Doors and Shutters, Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, may be sent on application to

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton.

TWENTY SECOND-HAND REGISTER and other STOVES TO BE DISPOSED OF. The several can be had at half-price, some of them having very little been used. For particulars apply to F. EDWARDS, SON, and CO. 49, Plumb-street, Oxford-street.

CLARK'S PATENT SMOKE-BURNER: an improved means of perfecting Combustion, and thereby effecting Smoke.

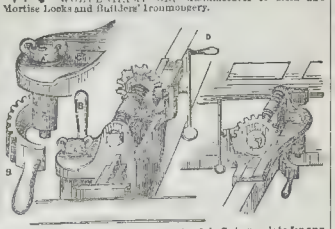
This patent is now in operation upon Steam engine Furnaces, Locomotive and Marine, Boilers, and upon Ovens. It is adapted for every description of Furnace, such as Warme Boilers, Coppers, Cake Ovens, Bakers' Ovens, Potteries, Chemical Works, &c. It is acknowledged by every engineer inspector to be a consumer of perfect of the smoke, consequently avoiding the Smoke Nuisance, and in many instances with a diminished consumption of fuel.

The furnaces, of various construction, to which it has been successfully applied may be seen in operation at the Cement Works of Messrs. FRANCIS, BROTHERS, Nine Elms, London.

Address THE SMOKE BURNER COMPANY, Nine Elms, London.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS, Steam, and Water, for water, high-pressure works, &c. Manufactured by Dr. Arnott's improved ventilators.—HULETT and Co., High Holborn.



IRON FOUNDRY, HARROW STREET, LANT-STREET, SOUTHWARK.

W. R. BARTLETT, manufacturer of Girders, Columns, Cantilevers, Straining Bars, Pinions, Iron Frames, Hat Plates, Cask Plates, Wrought Spindles, Nuts, and other Wheels, Screws, Pumps, Engine and Lathe Castings, Force Backs, Grave Bars, Kilns Bars, and other castings, to patterns or drawings.

TO MASONS, SAW-MILL PROPRIETORS, and OTHERS.—FOR SALE, an IRON STONE-SAW by E. FAME 13 feet by 3 feet in it is clear all complete. Also an 8-in. traveller, crab, block, &c. capable of lifting ten tons; a vertical sawing frame, with twenty-four saw buckles, &c. complete; a moulding machine, with irons of all patterns; an excellent planing machine, with two pairs of irons, and two pairs of bench irons; a tenoning machine, with two pairs of irons; a pair of bench mortising machines, and two mortising machines for heavy work; and the property of a builder retiring from business. Apply to MR. ATLACK, 144, Charlotte-street, Caledonian-road.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. RISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rebated and Mortise Locks and Builders' Ironmongery.

AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric motor of iron, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw A the slab up to the side of the joist, then by the set screw A. Turn the notched lever B B against the joist, then, by turning the handle D, the lever will grip steadily on its fulcrum and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will it clench hold. The Patentee, in asking the attention of Builders and others, assures them that it is a cramp possessing great advantages. It is a most cramp of the kind, and as well as it is for doors and sashes as for floors. From its superior mechanical principles, it has great power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

HART AND SON, IRONMONGERS AND MANUFACTURERS, 53, 54, 55, & 57, WYCH-STREET, STRAND.

CORONAS, SCONCES, GAS BRACKETS, &c.

An Illustrated Catalogue on receipt of Four postage-stamps.

TO ARCHITECTS AND BUILDERS.

PATENT CLIMAX DOOR-SPRINGS.—The attention of architects, builders, and ironmongers is particularly directed to the above patented improvements in door-springs, being the most perfect and durable yet invented. Their power is equal to doors of any size and weight, and they are warranted to stand the wear and tear of any public building, or business establishment in the kingdom.—Drawings, with full particulars, may be had from the manufacturers, WEBB and GREENWAY, Stechford-lane, Birmingham.

W. FRY and CO. 57 or 35, Great Guildford-street, Southwark.—Hot water, hot air, or steam buildings of every description, heated by any of the above ways, at the lowest possible cost, and in the best style. Architects &c are invited to submit designs, and in the best style. Architects &c are invited to submit designs, and in the best style. Architects &c are invited to submit designs

ZINC ROOFING, INCLUDING TIMBER OR IRON FRAMEWORK,

IS AS

CHEAP AS SLATES OR GALVANIZED IRON, LIGHTER, AND MORE DURABLE.

Certificates, and Models of various descriptions, may be seen and estimates obtained on application to

THE SURVEYOR OF THE VIEILLE MONTAGNE ZINC MINING COMPANY, 12, MANCHESTER BUILDINGS, WESTMINSTER.

ROOFS CONSTRUCTED UNDER HIS SUPERINTENDENCE GUARANTEED TO REQUIRE NO REPAIRS FOR AT LEAST TEN YEARS.

THE OLD METAL BEING ALWAYS RETAKEN AT HALF-PRICE, RENDERS IT ADVANTAGEOUS FOR ALL TEMPORARY BUILDINGS.

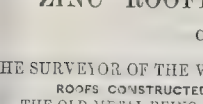
Many roofs covered with zinc thirty five years ago have never required repairs.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

HEATING BY HOT WATER

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c., &c. to their superior APPARATUS At Messrs Weeks' establishment, an apparatus with no boiler has been kept in full operation heating four buildings, the length of pipe in each of which is 60 feet in length, at the small expense per day in fuel and labour of 3s 6d This achievement in heating by hot water is unprecedented

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. are now commencing with confidence their IMPROVED COOKING STOVE, the notice of the public. It is exactly in the form of an ordinary kitchen range, and is easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is now furnished in sizes suitable for large or small families. It is now on daily in the stove and general department of Deane, Dray, and Co.'s establishment; where may also be obtained cooking apparatus in brass, or forwarded free by post DEANE, DRAY, and CO. opening to the Monument, London-bridge. Established A.D. 1700.

GAS COOKING-STOVES, for large or small establishments—DEANE, DRAY, and CO. 1, Arthur-street East, London-bridge.

Testimonial respecting the Original Patent Kitchen, as fitted by DEANE, DRAY, and CO.

5, Richmond-terrace, Whitehall, March 9th, 1853

Gentlemen I have great pleasure in bearing testimony to the capabilities of your cooking apparatus, fitted up in the kitchen of the largest and most effective yet most compact portable mansion, club houses, private houses, and the army; having cooked on one occasion for 400 individuals of beef, veal, mutton, lamb, tongue, &c.; roasting in one department a baron of beef weighing 30lbs in nine hours, forty three minutes, presented by Sir John Ross, esq. T. Peddie-street to the directors, for the occupation given to the French ministers. They have been in full operation for ten months, and remain in as perfect order as when first fixed. They have not cost one shilling for repairs."

I am, Gentlemen, yours respectfully,

EDWARD HORNE.

Messrs. Deane, Dray, and Co.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CIRCULAR and SADDLE BOILERS in STOCK, also the newest furnace bars, ornamental and plain supply cisterns, ash-pit doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and screw elbows, &c., also, trough pipes, brazing and joining of the above, on application to J. JONES, Iron Merchant No. 6, Bankside, London, near the South-wark-iron bridge

P.S. As large and choice an assortment as any house in London Gas-fitting Contracts to any amount.

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kings road, Chelsea, and added to their very extensive and first class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can at all times on short notice supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished Companies and Contractors in the world with their Machines for home and foreign use.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that they have JUST RECEIVED large stocks from the principal quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Scagliola, Mortars, Vases, &c., Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom holding Italian Marble the position of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Sienna, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson he no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE-PLACE.
SAMUEL CUNDY.
THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.

YATES'S MARBLE WHARF, Crescent-terrace, Millbank. MR. YATES begs to inform the friends of his late father, and Mr. Yates, and all persons connected with the Marble trade, that the business of the above premises will be carried on externally under the superintendance of an able manager. A large quantity of Marble Slab; also a good stock of chimney-pieces, and other marble works.

ARCHITECTURAL AND ORNAMENTAL DECORATIONS.
Architects and the Trade are respectfully invited to inspect specimens of the

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

BOW-BRIDGE SLATE WORKS, Stratford, near London.—A. A. ROBINSON begs to inform Architects, Builders, Contractors, and Others, that his Price List of Slates and Slab Work, can be had on application, enclosing a postage-stamp. Country and export orders promptly attended to.—N.B. A liberal discount to the trade.

TO BUILDERS and Others in Town or Country.—For PRICES of BANGOR SLATES, apply to SCOLES and WOOD, Market Wharf, Regent's park.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality, for the Trade. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO BE SOLD, 28 Tons of WESTMORELAND SLATES, at 3l. 15s. per ton, delivered on Trucks at Bishop Stortford Station.—Apply to J. L. GLASSCOCK, Builder, Bishop Stortford.

BANGOR SLATES, of all sorts and sizes SLABS of all dimensions, and of superior quality.—For prices and particulars, apply to J. EASTWOOD and SON, Surrey Canal-bridge, Old Kent-road—Export orders supplied promptly.

TO ARCHITECTS, BUILDERS, IRONMONGERS, &c.
ENAMELLED SLATE CHIMNEY PIECES, of elegant designs and superior workmanship, at great variety, at prices from 21s. to 10 guineas. Slate Cisterns made to any size. J. HOWELL, Manufacturer, 5, Cook's-ground, King's-road, Chelsea, Mid Hosex.

ENAMELLED SLATE.—REDUCTION in PRICE.—Mr. MAGNUS having completed some extra machinery, is enabled to announce a further reduction in price; the trade a very liberal increased discount to the TRADE. All best goods are now supplied at prices below those charged by other parties for very inferior imitations of his work.—PIMLICO SLATE WORKS, 30 and 4, Upper Belgrave-place, Pimlico.

SLATING, 22s. per square, net cash on completion.—T. B. HANNAFORD, Slate Merchant and Slater, Trevalgan Wharf, Ratcliff Cross, is enabled to execute Slating to any extent in Town, for Builders of position, at the above low price. Slate Paving, 1½ inches thick, planed one side, and squared ready to lay, 4d. per foot super.

LLANGOLLEN FLAG and SLATE COMPANY. The present proprietors of the Quarries, formerly worked separately by the Llangollen Flagstone Company and the Llantysilio Slate Company, are now prepared to supply Architects, Contractors, slate merchants, builders, and others with FLAGS, SLATES, and SLABS of every description, Steps, Chimney-pieces, Baths, Fillers, Lintels, Mangers, Ridges, &c. &c. every public house of the beautiful material, all of superior quality. The Llangollen Slabs, from their great durability, and the extraordinary size in which they can be obtained, are peculiarly adapted for the paving of railway stations, malthouses, breweries, conservatories, warehouses, &c. A cheap variety of self-faced flags for street paving, &c. can be supplied at very moderate prices.—Prices and further particulars can be had upon application to Messrs. JOHN TAYLOR and SONS, 6, Queen-street place, Upper Thames-street; Mr. S. VENABLES, at the Company's Premises, 4 Wharf, south Wharf-road, Paddington; or to Mr. GEORGE F. DYKE, at the Works of the Company, Pentrefelin Wharf, Llangollen.

VALUABLE QUARRIES, &c. in FORFARSHIRE, TO BE LET.—To be let for such number of years as may be agreed on, with entry at Martinmas next, the extensive and well-known FLAG or PAVEMENT and FREESTONE QUARRIES of LEYSMILL and BALDOVIE, belonging to W. F. Lindsay Carnegie, Esq. and situate on the line of the Arbroath and Forfar (Aberlemno) Railway, adjoining to the Leysmill Station, about five miles from the seaport Town of Arbroath. And along with them will be disposed of the whole MACHINERY, comprehending six Stone Planing Machines with the Polishing Apparatus, two Steam-Engines, &c. now in active operation. The FARM of LEYSMILL, extending to 170 acres or thereby, of arable land all enclosed and thoroughly drained, and in a high state of cultivation, and with an excellent steading of farm offices, may, if desired, be let along with the Quarries.
The Leysmill Quarries have been long established, and worked upon a large scale by the present proprietor; and an extensive trade is now carried on from them both in the home and export market, for which there are extraordinary facilities. There is a railway station at the quarries, and direct railway communication is afforded to all parts of the kingdom. The neighbouring ports of Arbroath and Dundee are also accessible by direct railway conveyance. The flagstone is known at home and abroad as Arbroath Pavement, and the freestone is of the first quality, and can be raised of great size. These quarries were the seat of the invention of Hunter's stone planing-machine, now in such general use. Their produce is specially adapted for working by machinery, and a new invention of Mr Hunter's, for sawing blocks and sinks to work, recently patented, and which promises to be of great importance to the planing machine, may be seen in operation there, also by Leysmill railway station.
For capitalists wishing to embark in the stone trade, or to a new company which might be formed for the purpose, this affords a opening which is deserving of attention.—For further particulars apply to JAMES LESLIE, Esq. Civil Engineer, George-street, Edinburgh; Messrs. LINDSAY, MACRAY, and HOWE, W.S. Edinburgh; or to Messrs. LOUSON, MACDONALD, and BLACK, Writers, Arbroath, the last of whom will give directions for viewing the quarries, and in whose hands offers may be lodged on or before the 1st of SEPTEMBER next.
Knablethmont, near Arbroath, 20th June, 1855.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Forecourts, Malt-houses, Corn Stores, Floors, Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.
Apply to JOHN SILKINGTON, PORTUGUESE BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.
N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches

THE SEVRES GLASS COMPANY.

LEGENDRE, TURPIN, AND CLARK

FOR GLAZING PURPOSES.

Lists of Prices may be obtained at the places named in another advertisement in this publication.

THE WORKS—POCKET-NOOK, ST. HELEN'S—JULY 2, 1855.

TO ARCHITECTS, BUILDERS, CONTRACTORS, AND OTHER CONSUMERS OF GLASS.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th of an inch thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th or 4 lbs. is now universally used for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, MILLS, MARKET HALLS, BATHS AND WASH-HOUSES, FACTORIES, WORKSHOPS, SHIP-BUILDING SHEDS, AND OTHER EXTENSIVE BUILDINGS.

By a carefully prepared Estimate, it has been ascertained that FOUR-FIFTHS of the ROUGH PLATE, or non-transparent Glass, consumed in the United Kingdom in 1854, manufactured by HARTLEY'S PATENT—thus affording the most incontestable evidence of its superiority over every other article of the kind, and as being the only cription of Glass suitable for the purposes above named. It combines size and strength with economy of cost, and is manufactured in sizes expressly for RIDGE and ROW ROOFS, giving a SPAN of TWELVE FEET, at a price not exceeding, weight for weight, that of Common Crown Glass. Its non-transparency renders BLINDS ECESSARY, and no scorching occurs in Greenhouses glazed with it; hence the preference given to this Glass for all Horticultural purposes.

For further particulars, apply to

AMES HARTLEY AND CO. SUNDERLAND; AND PURFLEET WHARF, EARL-STREET, BLACKFRIARS, LONDON.

REDUCED TARIFF.

CCC CROWN, 18 Tables, per crate, 30s.; H 15 oz. SHEET, 2d. per foot; FOREIGN SHEET, 200 feet cases, 34s. per case; CROWN or SHEET SQUARES, 100 feet boxes, 2d. per foot; HARTLEY'S PATENT ROUGH PLATE, from 6½ and PERFORATED VENTILATING GLASS, 1s 6d. per foot; CRYSTAL SHEET GLASS, 4½, 6d. and 8d. per foot. PLASHED RUBY, 1s GROUND SHEET, 3½ ENAMELLED, 3d. per foot. Sashes primed and glazed, 3d. per foot.

Catalogues free, on application to the Managers, as above.

GLASS PAN-TILES, packed in cases of fifty, one-quarter of an inch thick, 1l 17s. 6d; three-sixteenths, per case of sixty, 2l 18 3d.; one-eighth, per case of sixty, 1l 17s. 6d Foreign Sheet Glass, in cases of 2 feet, 32s, 36s and 40s. per case. Crown Glass, in crates of eighteen tables, from 24s. Crystal White Glass, for pictures, at 4d. 6d. and 8d. per foot. JAMES PHILLIPS and CO. 116, Bishopsgate-street Without, London

PATENT and BRITISH PLATE GLASS.—JAMES BEDLEY and CO. beg to inform Architects, Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application; they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured. Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 35, Soho-square, London.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned. Workshops, 100, Broadwall.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence, Shop-front Builder and Manufacturing Joiner. 1¼ and 1½ four panel doors from 6s. each; 14 sashes and frames from 7d. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for according to design.—A List of Prices sent on application.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators and others, to their large assortment of ENRICHMENTS for every description of Buildings, suitable for the Exterior and Interior decoration, executed in Papier Mache, Carton Pierre, and Fibrous Plaster, from the most simple form to the richest Elizabethan and Gothic Designs, in many designs. Door-cases, mouldings and dressings.

A large assortment of Centres, Bosses to marry various intersections of all sizes, trusses and panel mouldings and dressings.

Just published, for one price, stitched 2s.

GEOMETRY as an ART; being the Second Part of the Elements of Geometry and Mensuration, with Easy Exercises designed for Schools and Adult Classes.

By the Rev. T. TATE, B.D.

Formerly Fellow of St. John's College, Cambridge; Editor of "Wood's Algebra" (new 12th edit.) and Author of "Commutation to Wood's Algebra" (post 8vo. 6s.)

Just published, Part I.

GEOMETRY as a SCIENCE (a short reformed Euclid), in 6 books stitched. Parts I. and II. together, price 3s. 6d. boards.

In the press, Part III.

GEOMETRY combined with ARITHMETIC (commonly called Mensuration), Part IV. GEOMETRY combined with ALGEBRA.

A KEY to the Exercises is also in preparation.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION OF CHEVREUL ON COLOUR.

In crown 8vo, with 11 flat tints, price 10s. 6d. cloth,

THE PRINCIPLES of HARMONY and CONTRAST of COLOURS and their Applications to the Arts; including Painting, Interior Decoration, Tapestries, Carpets, Mosaics, Coloured Glazing, Paper Hangings, Calico Printing, Letterpress-printing, Map-colouring, Dress, Landscape and Flower Gardening, &c.

By M. E. CHEVREUL, Member de l'Institut de France &c.

Translated from the French by CHARLES MARTEL.

Second Edition, revised.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW and IMPROVED SCHOOL BOOKS.

By PROF SULLIVAN,

Of the Irish National Education Board.

1. THE SPELLING-BOOK SUPERSEDED. 38th edition, 1s.

2. INTRODUCTION to GEOGRAPHY and HISTORY. 2s. 6d. cloth, 3s.

3. GEOGRAPHY GENERALISED, with an Introduction to Astronomy and the Use of the Globes. 6s.

4. AN ATTEMPT to SIMPLIFY ENGLISH GRAMMAR. Fcap. 8vo. 3s.

5. A DICTIONARY of the ENGLISH LANGUAGE. (In the press.)

6. THE DICTIONARY of DERIVATIONS. 6th edition. 2s.

7. THE LITERARY CLASS-BOOK; or, Readings in English Literature. 3rd edition. 2s. 6d.

*** The examination of these books in Ireland, Great Britain, and the Colonies, amounts to upwards of 150,000 copies per annum, as appears by the following return from Messrs. A. Thom and Sons, their Queen's printers in Ireland:

"By returns from us we find that 370 copies of Professor Sullivan's School Books have been printed in our establishment within the last three years.

"ALEX. THOM AND SONS.

"1st July, 1855."

WOOD PLANING MACHINERY.—FIRE-PROOF BUILDINGS.

PRACTICAL MECHANIC'S JOURNAL, Part 26, AUGUST, 1855. One Shilling. Illustrations. Large Copper-plate Engravings of Heathorn's Annular Safety Valves, and Waddell's Wood Planing Machine, and Twenty-five Wood Engravings.

Contents.—Letters Patent and how to obtain them, by Authors of Patentee's Manual. Facts all at the Irons Patent Law Assurance.—Manufacture of Gun-powder.—Heathorn's Miner's Safety Lamp.—Machine for Making Driving Belts.—Paper Perforating Machine.—Kirkby's Solid Axle Bush.—Steering Gear.—Machine for Making Spun Axles.—Pond's Measuring Glasses.—Machine Kirkby's Solid Axle Bush.—Steering Gear.—Machine for Making Driving Belts.—Paper Perforating Machine.—Manufacture of Gun-powder.—Heathorn's Miner's Safety Lamp

The Builder.

Vol. XIII.—No. 652.

SPENSER, were he writing now, could not describe the Londoners' river as "The silver-streaming Thames;" nor could Denham call it,—

"Though deep, yet *clear*."

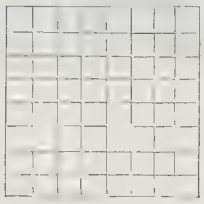
Meetings of inhabitants, deputations to Board of Health, Lord Mayor's well-meant inquiries, learned professor's card-dropping, all concur to show that public attention is to some extent directed to the evils resulting from the present appropriation of the drainage of London, and consequent condition of the Thames. Year after year the once translucent and beautiful river has become more and more impure: in fact, it has been converted into a gigantic and foul ditch, into which, besides that of London, the drainage of many places is passed. For example, as this fact should not be forgotten, Cirencester, with a population of 6,096; Cricklade, with 33,505; Fairford, 1,859; Farringdon, 3,122; Lechlade, 1,373; Oxford, 27,843; Wallingford, 2,819; Thame, 2,869; Reading, 21,456; Henley, 3,733; High Wycombe, 7,179; Amersham, 2,093; Maidenhead, 3,607; Guildford, 6,740; Windsor, 9,596; Uxbridge, 3,236; Watford, 3,800; Rickmansworth, 4,851; Staines, 2,430; Chertsey, 2,743; Kingston, with 6,279 persons; and many other places, saying nothing of the 8,000 persons, who, according to the last returns, sleep on the river; all contribute to the result we are now deploring. At Kingston, by the way, to which point some of the Water Companies have resorted for their supply, operations are going on to render it a most unfit spot for such a purpose. The effect of impure water in producing disease, is surely too certain to need further proof at the cost of life.

The population of the London district alone in 1851 was nearly two and a half millions, thus divided:—

	Males.	Females.
Middlesex	814,594 —	931,007
Surrey.....	225,617 —	256,818
Kent	66,347 —	67,853
	1,106,558 —	1,255,678
		1,106,558
Total		2,362,236

In considering this most important subject, it is right to remember that in 1666 the population of London was about 400,000; in 1801, 958,863; and in 1851, 2,362,236. In 1900 we may expect a population of nearly 5,000,000.

Our diagrams will aid through the eye in giving a clear idea of this progressive growth.



In London, in 1801, there were on an average nearly 394 square yards of land to every person, and 2,784 square yards to every inhabited house. In 1851 there were on an average 160 square yards to every person, and 1,234 square yards to every house. If the same rate of crowding be continued, in 1900 we shall not have so much as 80 square yards for each person, and 600 square yards for every house. The size of the squares in our diagrams will convey an idea of this difference.

These figures ought to convince all of the vast consequence of this subject, and that it is only by meeting the matter with promptness, energy, and skill, that we can hope to escape great loss of life and other calamities.

The best mode of healthfully and economically getting rid of the sewage of London and other large towns is one of the greatest and most pressing questions of the day.

Comparative Population of 1666, 1801, 1851, *and the estimated Population in* 1900.

Density of the Population of London in 1801.

Density of the Population of London in 1851.

Density of the Population of London in 1900.

The Thames is not the only river in course of pollution. The miserable state of the Clyde, amongst others, is beginning to attract the attention of the good people of Glasgow, and it is quite time that it did so: it is described to us as steaming with poisonous exhalations.

It would be not a twice-told but a twenty-times told tale, to urge in these pages the paramount necessity of good drainage. A knowledge of this fact is becoming general; but it is painful to notice how slowly we have moved.

Once upon a time the well-known and disreputable *Fleet* was a crystal stream. In the reign of James I. and even before then, it had become a dangerous nuisance; and since that time wit, sarcasm, and abuse have been tried against it: the strong power of the press has battered against the Fleet for more than a quarter of a century; medical men have shown the evil of living near its banks; and yet this venerable abuse has not at the time we write altogether vanished from the sight. While it was uncovered it served to afford some idea of the cause of the pollution of the Thames to those who might otherwise have been ignorant; for few except the ratcatchers, those who search for lost valuables, and others whose business it is, can be persuaded to venture upon a walk through a London sewer,—to stand, and by the help of lantern light see and hear the waters which pass, for example, through the sewer below Scotland-yard. On the shore of the river there, however, at low-water, or standing on Hungerford-pier, you may see something of what is going on.

We have occasionally loitered on the Gravesend steamboat pier at London-bridge, where hundreds of Londoners, bent on the search for pleasure and fresh air, embark in the close neighbourhood of one of these inky floods. We will take away the canvas screen which usually hides it, and show it as it appeared a few mornings since, the pestiferious flood rolling and roaring, and throwing up a spray whereon the sun marked for an instant a mimic rainbow;—Beauty and Filth!

The river on that day, from Chelsea to the spot in question, differed little in complexion from this, its foul tributary. What with the sewers, the soot, and other defilements, old Father Thames is in a sad pickle. If he were to see himself as he appeared in Queen Elizabeth's days, he would feel most thoroughly ashamed and out of sorts with himself, particularly if he remembered how much his wealth had increased, —the number of his ships and visitors from all parts of the world,—and that, instead of becoming, with his prosperity, a useful and personable gentleman, he had sunk into a dirty, unsightly, and poisonous scrub.

In the reign of Queen Elizabeth, that worthy lady and her fair maids of honour were often gladdened by the clear countenance of Father Thames. The city dames and London prentices were delighted with him. Salmon, then, as may be seen by reference to prints of the period, could be readily captured opposite "*Paul's*." The most cunning fisherman would now fail to catch here anything but slimy eels.

We know a Thames waterman who for upwards of fifty years, "as man and boy," has been well acquainted with the Thames, and who remembers salmon being caught at Blackwall-reach. "That," says he, "is forty years ago, and cannot be done now. What would they say if the whitebait, like the salmon, should desert the old river?"

The city dames and 'prentices of our time begin to look on Father Thames with suspicion and dislike, and many thousands of pent-up Londoners, instead of looking up to him as a blessing, say that such water as he can now supply is a curse instead. Father Thames, however, asks, and with justice, too, "Have I been fairly treated? Has a tythe of the riches and benefits which I have been the means of showering upon others, fallen to my use? Have I, who have been the means of carrying out great improvements, been used with due consideration? No! I, an old and useful servant, have been left in such neglect, and exposed to such defilement, that I am not only becoming disgraceful, but dangerous! Gog and Magog have been painted and beautified, but woe is me!"

We raise our voice against any endeavour which may be made, founded on the injury which is now being done to the river, to stop admission to the sewers even temporarily, and

THE THAMES AND ITS TRIBUTARIES.

Londoners Embarking for Fresh Air at London-bridge.

retain the sewage in cesspools. This remedy would, indeed, be much worse than the disease. Every endeavour should be made immediately, and without stint, to free the river from the pollution to which it is exposed, and if possible to apply productively the fertilizing matter now wasted; but pending this the refuse of our houses must be got away: to stop draining, and revert to the cesspoool system would be an act of madness. A step, however, towards this was attempted last week, at the Court of Sewers, but was negatived by a resolution, declaring that, "This court, while deeply sensible of the necessity for intercepting the sewage from the Thames, and anxious in every way to promote that object, is not, meanwhile, prepared to stay or discourage the connection of house-drainage with public sewers, which would greatly inconvenience the community, endanger the public health, and therefore be highly inexpedient."

In seconding this resolution, Mr. F. O. Ward urged that the pollution of the Thames to the extent now being commented on was but *occasional*, and was one of the evil effects of the retention of the refuse-matter in cesspools and badly-constructed sewers, which was all poured into the Thames by a storm after drought. He did not mean to say that the daily outflow from the sewers was not an evil, nor that it did not contribute to the pollution of the river; but he thought that a daily discharge, daily carried away, was far less dangerous than such sudden eruptions of filth as he had just described. To test the correctness of this view, he had made inquiry as to the effect produced on the Fleet by the late violent storm; and he found that the Fleet had poured down a most black and noisome tide, so swollen as to overflow its banks at New Farringdon street, and so fœtid that the clerk of the works engaged on a large sewer in progress there had been obliged to scatter chloride of lime along the banks of the Fleet to mitigate its sickening emanations. And as the Thames had since recovered, and returned to its ordinary condition, so also had the Fleet. It would be observed that the sample did not prevent the unusual blackness and fœtor described as having previously existed; and he might add that when he visited the Fleet at the spot last Friday, in company with Dr. Varrentrapp, of the Legislative Council of Frankfort, and his brother, Professor Varrentrapp, they could none of them perceive any sensible odour from the stream, which a few days before had infected the air all around. Hence it was clear that the causes in operation were not, as some writers supposed, of a casual nature, operating exclusively on the Thames (such as canal-cleansing, gas-liquor discharge, &c.), but that the temporary pollution was due to circumstances affecting at once the Thames and the Fleet. He thought this confirmed his view, and pointed conclusively to *accumulations* of filth, taking place mainly in consequence of drought, and subsequently discharged into the river, partly, no doubt, in daily driblets, but partly also in sudden bursts, as the main cause of such pollution as that which Professor Faraday had observed. And, therefore, accumulated deposit being the source of evil, whether in foul cesspools, foul house-drains, or foul sewers, our endeavour should be to get rid of such deposit in all its loathsome forms; to persist in developing the self-scouring tubular system; and, above all, to extirpate as rapidly as possible those hideous sepulchres of rottenness called cesspools, which some writers assumed to be abolished, but which still existed under four-fifths of the London houses,—under the mansions of the rich as well as the hovels of the poor. Every house drained by a self-scouring pipe, instead of a cesspool with an overflow drain-of-deposit, would contribute only one day's discharge, and that fresh, instead of many days' discharge, and that putrid, to the storm waters flowing down the sewers to the river. Like abatement of evil would ensue in the case of every tubular sewer substituted for the great brick vaults now accumulating deposit under the streets. And thus, while they were preparing and executing their great intercepting works, immediate mitigation of their sanitary sufferings might be obtained; the houses and streets thus improved being at once rendered more healthy, and the river itself being no longer exposed, in so great a degree as heretofore, to sudden pollution by storms. *Entirely* to obviate such pollution, they must adopt, he believed, the principle of separating the sewage proper from the rainfall, and declare, with him, "The whole of the rainfall due to the river, the whole of the sewage due to the soil." That, he was convinced, was the only true and complete solution of the sewage problem.

Bad as was the condition of the Fleet-ditch, with the *manufactories* by its sides, it will be found, by a reference to the health statistics, that the mortality amongst those in its immediate neighbourhood was not so great as in the courts and alleys surrounding it in which there *was no drainage;* and the reason is obvious, for near the Fleet the refuse of the houses was carried away to a certain extent; the stream itself was comparatively diluted, and its rapid course perhaps tended in some measure to prevent the stagnation of the atmosphere.

According to the Local Management Bill, as it now stands, the Metropolitan Board of Works are to execute a scheme of intercepting sewers by December, 1860, or five years from this time, if certain preliminary difficulties can be got over,—not a very cheering prospect for those who feel the importance of properly draining London, and disposing of the refuse, even if it be realized. The chances, however, would seem to be, looking at the various duties intrusted to this Board, that it will not be done at all if left in that way. A correspondent on this subject, Mr. Frederick Smith, says,—

"A variety of plans for constructing works to rid the Thames of its impurities are before the Metropolitan Commissioners of Sewers. These commissioners have in their hands 300,000*l.* to be devoted to this special object. A committee of the court of commissioners resolved that it was expedient to refer these plans to a committee of engineers, but the court

did not act upon their own committee's recommendation. Money, plans—everything, in short, is ready for immediate action. Modify, then, Sir B. Hall's Bill thus—it is but a very trifling modification after all—hand over the plans and money to Her Majesty's Board of Works: let them at once proceed to carry that plan pronounced by a committee of engineers to be the best into execution, availing themselves of course of the successful candidate; and when Sir B. Hall's board is ready to undertake the task, let Her Majesty's Board of Works transfer the whole affair over to Sir B. Hall's board. I am no prophet if the intercepting sewers will not be very near completion by the time Sir B. Hall's board will be ready to accept the transfer."

Without confirming his belief that both money and plans are ready, we are perfectly satisfied as to the necessity of immediately taking the most energetic steps to obtain them. The present condition of the Thames is a disgrace to us as an intelligent people. We waste a fertilizer, and we poison the waters.

THE MODERN HISTORY OF ARCHITECTURE.

In previous papers it has been our endeavour—besides contributing to knowledge of facts—to lead attention to aspects in the history of architecture, whence light may be reflected upon questions in the present condition of the art. If we have succeeded so far, it will have been apparent, that at various epochs, the point had to be solved practically, between the preponderance of *novelty* as an element in art, and the subordination of that, in favour of forms supposed to be *certified* as embodying beauty of effect. The latter aim involved the whole matter of what is called "precedent-rule." Now, the object in all good artistic effort is not *one* of these two, but *two-fold*; and question on the subject never could have presented itself had not one element been unduly exalted, ere the other claimed to supply its place. It is the tendency of all opinions to oscillate between extremes. Men do not take the time to sum up and balance, in the Jeremy Bentham manner, the heads of this side and that;—indeed, it requires a colossal mind to do so. To that we can make no pretension. We merely go on to remark that, whilst it is not in evidence that before the last sixty or seventy years, the question referred to above, was raised except at comparatively long intervals, during the later period it has been revived over and over again. At least, so should we say with the single qualification that may be involved in substituting merely novelty of model for novelty of invention. Thus, from opposite directions, the same general absence of *art* was arrived at. Men forgot that the *use* of a good model was not necessarily the *right* use of it.

It should not be inferred, that all were intentionally copyists. But the result was much the same as if that had been the case. More would have been needed than the catching the spirit of the original—put forth even by recent writers as the end of art,—far more than the production of *fac-simile*. Whether chiefly from the absorption of mind in one of the materials of art—archæology, or from a low state of æsthetics (or whatever name we give to the range of philosophic analysis at this juncture first sensibly needed),—or from positive want of the requisite industry, or artist-feeling,—certain it is that the knowledge that was possessed was turned to no real account. We infer the deficiency of proper zest for *art*, because, where the case is otherwise—efforts will involve the exercise of the creative power which is productive, as essential to the existence, of works of ART. With a true artist-mind, reproduction would be unthought of,—would be even impossible. Many architects of the present century deserve neither unqualified praise, nor the censure which it has been the practice of certain writers to give them. Mediocrity, however, may be a demerit in artists, as in poets.

But, it is the general perception of art that has been out of character with the age: and this has made the mistakes of which architects have been the instruments. To that only can be due the excessive apprehension about taking any step, for which immediate reference could not be quoted from an original. Wherever a feature could be drawn from the works which happened to be in favour, the praise was given to him who was supposed to copy from it. The rest of the building took its chance; and the result was a combination of discordant parts. The tendency, therefore, was to produce what was neither good in point of art, nor accurate in "copyism."

There may be novelty without beauty, and beauty without novelty; but there cannot be that particular effect which gratifies in a work of ART, unless both elements are present; and we believe that the efforts to depreciate precedent, or to inculcate anything that may lead to its despotism,—the neglect of models, or the misuse of them,—are equally erroneous as restricted principles. But, as we have shown—beyond the ordinary agitation of these questions—a further influence sprang up at the new era, opening at the juncture when the old art was "a creed outworn," and when the question was—a new belief, or old? That feature of the time was the modern spirit of research,—the investigation into previous history, and the digging out of the records of former art. There was considerable difference between the spirit referred to, now, and any manifested at previous dates. The old Roman collectors had given their attention to Egyptian and Greek antiquities,—mainly to the latter. The later Italians re-discovered the collections and the works themselves, of their predecessors. But the new era inaugurated was that of general investigation and discovery.

Particulars of travels and researches in Egypt and the East, with investigations such as those in Athens by Wheeler and Spon in 1676, and the drawings of Carrey, made in 1674, as they became known, contributed, with the knowledge of what there was in Rome, to develop such a tendency. The chief *impetus*, however, in the direction alluded to, was produced in the latter part of the reign of Louis XV. in France, or within the first few years of the reign of George III. in England,—the latter reign we may say, commencing in 1760, and the other ending in 1774. Indeed, before 1760, the Greek architecture, as we have shown in a former article, was known to the French; and in England it was commented upon in Sir Wm. Chambers's treatise, published in 1759, though unfavourably to its merits. The publication of Stuart and Revett's work, commenced in 1762 (not in 1752, as by a misprint in the last article), the first edition continuing to appear at intervals till 1816. We should be disposed to ascribe to this work more of an immediate influence on the *study of classical antiquities* than similar influence on architectural *style*. It was after the expiration of the war that many of the chief imitations of Grecian architecture were produced. The copy by Stuart, of the Tower of the Winds, at Shuckburgh, Lord Anson's seat in Staffordshire, and a few other works, are exceptions; but the bulk of the Grecian Doric and Ionic of our country belongs to a much later date. Doubtless, however, Stuart helped to produce that idea of classical simplicity which was ultimately proffered in lieu of thought. His work is remarkable for careful drawings of the marbles, now forming part of the Elgin collection.

In 1772, Sir Wm. Hamilton's collection was purchased for our British Museum. Previous to that time, however, important collections had been formed in England, amongst which may be mentioned that of the Earl of Arundel, in 1634, now at Oxford. The most important English acquisition—except the Elgin marbles—the Townley collection, was due mainly to the researches of Mr. Gavin Hamilton, which commenced in 1770. It was purchased by the nation in 1805, the Elgin marbles not being acquired till 1816. The publication of the Dilettanti Society's "Ionian Antiquities," commenced in 1767,—their other works not appearing till 1815, and later dates.

Let us now look to the influences of this character, and those alluded to in the last article, which were at work in the neighbouring country. In France, attention had been early directed to classical antiquities. It contributed to the production of the Roman character of architecture, noticeable in the time of Louis XV. An edition of Montfaucon's "*L'Antiquité Expliquée*," in 10 vols. folio, bears date 1719. Winckelmann, to whom the chief importance is due, published his "*Monumenti Inediti*" in 1767. Le Roy's work on the remains in Greece had appeared in 1758. The revolution, of tremendous importance in much that affected the condition of art, in the matter of style simply completed the course to which art had been tending under the monarchy.

The peculiar style of Louis XV. in interiors, and indeed in painting and sculpture, is so marked, and so widely prevalent, that people are apt to omit the requisite consideration of the contemporary tendency. The latter at length resulted, especially in the art of painting, in works totally different in character from that of the lively and graceful cabinet pictures of Watteau,—in works merely cold, academic, classical, and correct. As the history of such changes about this time throws light upon our especial subject, we shall venture to give them some attention. It will be recollected that the capture of the Bastille took place in 1789. Nobility was suppressed in France in the following year; in 1792, the Tuileries were besieged and plundered, massacres took place in all the prisons and religious houses of Paris, and France was declared a republic. Louis XVI. Marie Antoinette, and the Duke of Orleans were guillotined in 1793, and the war with England and Holland, and a rapid series of terrible events commenced. The elder David had already attained a reputation by his works, The Horatii, The Brutus, The Death of Socrates, and The Paris and Helen—all, be it observed, taking their subjects from classical antiquity. Citizen David became a leader of the *sans-culottes*.

A very Talleyrand he was in the facility of his transformations, whether in political adherence or in art. His bust in the Crystal Palace, with distorted lip, gives one more the idea of a hero of the Reign of Terror, than of the rank claimed for him as the father of modern French art. He it was who ordered the ceremonial of the festival of the republic, the procession of the works of art from Italy, which were brought in an imitation of a Roman triumph, and who later, was the favoured painter of Buonaparte. The portraits of Napoleon in the imperial robes, and crossing the Alps, are well known. The latter work, as designedly not the representation of the event as it took place, may be compared with the picture by Delaroche, where the general is, with greater truth to history, seated on a mule. The difference affords one means of judging of the changes in opinion on the subject of *the ideal*; changes which, of course, much concern the principles of all branches of art, but which changes are yet neither consummated nor very obvious in their ultimate direction.

The study of the antique which had commenced in France, grew up side by side with the most violent political passions. In fact, it seems to have become what it was by the force of those influences. That true love of *art* was the main engine of development, it would be hard to believe in the face of acts that are recorded. Wanton destruction to the precious antiquities of the whole country, which recent years would attempt, and in vain, to restore: similar destruction in 1794 at the Cathedral of Cologne, and the Rhine churches: the little regard for the masterpiece of Leonardo da Vinci, which permitted its decay: all these do not show that the enthusiasm amongst the artists was then supported out of love of what we call ART, by an appreciating people. Strasburgh Cathedral, it is said, was saved from destruction only by the device of crowning it with the red cap of the Jacobin club.

The antique happened to be the visible means of expressing what the nation desired to be politically. Roman example, Roman antiquities, and Roman subjects for pictures, were for a time alone regarded; so that, quoting literally from an accomplished writer, M. E. J. Delécluze,*

* M. Delécluze, formerly a pupil, and still an admirer of David, has recently published an interesting volume on "Louis David, son Ecole et son Temps."

in the Feuilleton of the *Journal des Débats*,—"the austerity of the taste even became almost savage." David was hailed as *Le vrai Lycurgue des Arts*.

In the revolution which occurred in art, the puritanism of the young painters anathematised everything that had been done by their predecessors: from 1792 to 1796, no *genre* painter would have had a chance of getting attention. Subjects were, in fact, selected almost exclusively from the time of the early Roman republic. There is some reflection from the same taste even in the works of Benjamin West. In England, both the Roman and general classical taste, as mentioned in our last, were expressed chiefly in sculpture. But whatever classical tendencies there were in the two countries, now should be viewed as irrespective of one another. The nations were at war; and whatever had appeared to be connected with the name of Buonaparte would have been rejected. Certain points of resemblance are to be traced in some of the furniture of Carlton House, and that of the Empire; but the resemblance, of course, arises by derivation from the same models. This department of art we may have another opportunity to speak of. For the present we have to observe the course of the influence of the French painter. David in merit was superior at least to his contemporaries. At length he himself contributed to moderate the admiration of the toga and the lictor's *fasces*, by representing an incident of contemporary life, although with some infection of the prevalent manner. The picture remained unsold; but the subject eventually became celebrated as the foundation of a new manner, which it helped to produce. The style of David, however, always retained a classical character. It is presented under its most favourable aspect in the picture of the coronation of Napoleon. That event happened in 1804.

Yet, between 1793 and 1809, taste in France underwent other important modifications. A more profound study of the antique began to show the painters the superiority of Greek art as compared with that of the Romans, who became considered as barbarians,—for as the French writer before mentioned says, in apt illustration of one of our positions above, he perhaps referring especially to France:—"It is in art as in politics,—you pass suddenly from white to black." Greek architectural details, it will be recollected, had been already long in use. David was the first to receive and transmit the new fever. In 1796 he had commenced a subject from Roman history—the picture known as the "Sabines;"—and this, as shown by a sketch extant, was originally intended to have the figures clothed with the Roman dress. The finished picture is, however, treated in the new manner. The next phase in the progress peculiarly exemplifies what we have so often before noticed as to the influence of a great master. We cannot refrain from again quoting what we find by M. Delécluze. "But," he says, "attached to the most skilful master there are always indiscreet pupils, who make false applications of the principles which they have received; and to the *hellenism*, soon succeeded a *Greco-mania*. Then, young pupils more rigorous in the matter of taste than the master, pronounced in their turn an anathema against all works of antiquity executed since the age of Alexander the Great." It must be remembered by our readers that precisely the same result tended to dim the legitimate fame of Michelangelo; and it has likewise been apparent that the indiscriminate admiration of another master, Palladio, produced some of the most unfortunate characteristics of art during the time now under review. In France, the finest works from Rome deposited in the Louvre in 1796 were viewed as corrupt, whilst the paintings on Greek vases, and even the *archaic* Greek sculptures, were held in disproportionate estimation. These causes tended to bring on the school discredit of which the master for some time bore the imputation.

The *manie* in question was at length dispossessed by another—of great importance, though of short duration; but the consideration of this we must reserve for another article.

ON POLYCHROME.

At the Warwick meeting of the Worcester Architectural Society, Mr. R. P. Pullan read the following paper on Polychrome:—

Before proceeding to say anything about the application of coloured decoration to ecclesiastical edifices, I should wish to remove the common impression that prevails that wall colouring produces a tawdry effect, inconsistent with the solemnity that should characterise a building dedicated to the service of God. We hear people who profess to admire the glowing glooms of stained glass windows, who rave about the ruby-coloured robes of the martyrs, who have a decided partiality for the painted pages of illuminated missals—who do not find fault with the warm hues of encaustic tiles, and who tolerate the introduction of altar pieces, painted in the rich yellow tones of the Italian school, or in the crude colouring of modern days, exclaim loudly, and I must add most inconsistently, against the introduction of polychrome in any shape, unless it be of the faintest, mildest, and most undecided character. I would remind them that although in all polychromatic decoration, only the primary and secondary colours are employed, yet that if they be distributed with good taste, the most refined and gratifying combinations can be produced. The very fact of the laws of decorative being those of heraldic colouring prevents many of those violations of taste that so constantly occur in the application of colouring upon colour, without an intervening line of black or white; and the constant use of diapers enables any one to avoid that glaring effect generally produced by large masses of colour unbroken and unsubdued. I would point out the Alhambra, as affording one of the most satisfactory specimens of refined colouring as exhibited in its reproduction by Mr. Owen Jones in the court of the Crystal Palace. It is well known to all that we have sufficient precedent for employing every means in our power to give our churches a richly-clothed and furnished appearance. It is well known that not only were almost all the buildings of the middle ages decorated with colour, but that also those people to whom we attribute perfectly pure and refined taste (the Greeks) coloured their finished works of art; that the friezes and pediments of the Parthenon, for instance, were decorated, and that in a bold and liberal manner; and that there was no stint of colour, but that there were masses of blue, red, and gold, which heightened and completed the effect of that noble edifice. As to the extent to which polychrome was employed in the middle ages, we have only to go into some of the nearest parish churches that have been unrestored, and with a pen-knife scrape off some portion of the numerous coats of whitewash on the walls, to discover traces of frescoes or of distemper paintings, and the result of our explorations will be such as to convince us that the mode of adornment was general, if not universal.

Having said a few words in defence of the practice, I may add some remarks upon the characteristics of the ornaments employed in the various styles; and it will not perhaps be uninteresting to you to hear something of the *modus operandi* made use of by me when superintending the decoration of the Byzantine and Mediæval Courts in the Crystal Palace, and in other buildings. As to style, the Byzantine style affords a wider field than any other for the purpose; for there are in all buildings of that period large spaces left round the domes, in the spandrils, and soffits of arches, which do not admit of the introduction of sculpture ornament, but afford ample space for the reception of coloured foliage and figures. Round the dome were generally arranged figures of saints beneath "the Palms of Paradise." On the spandrils were seen the four Evangelists or the four doctors of the Greek church. Our Saviour seated in judgment filled the conch above the apse. The soffits and wall spaces were covered with foliage, real "Arabesques," and with medallions here and there. The columns and pavements being of rich marbles, the effect produced is gorgeous in the extreme. I believe no one could enter the Church of St. Mark, at Venice, without being impressed by the magnificent *coup d'œil* it presents. I have lately had an opportunity of inspecting the finest Byzantine building in the world—the Mosque of St. Sophia, at Constantinople, the mother of all other churches in that style, and was gratified to observe that the few other Byzantine buildings that exist, bear a strong family likeness to their prototype, as far as arrangement and character of pattern are concerned. This style is in a measure applicable to our Roman buildings. In the Early English style, diapers became frequent, figures became more graceful, the eyes were no longer of the conventional almond shape, nor were the ladies all represented as brunettes: draperies partook of the elegance of those we find in the pictures of Giotto and Cimabue; and architectural features such as niches and crockets were introduced; but the crockets were then only in the bud, and were not fully developed until the Decorated and Perpendicular periods, when the foliage became much more flowing and elegant in its outline. Geometrical patterns (some of them of a very elaborate character) were common in backgrounds of the Decorated style. And I may mention that the "master" of architecture and decorations, Pugin, adopted this style as the perfection of both branches of art. In the Perpendicular style, draperies became more crisped and foliage also, figures and faces assumed the rather heavy proportions that we find in the engravings of Albert Durer, and in the stained glass of the time. Stained glass is always valuable as affording the best authority for costume and ornament for wall painting, seeing that so few wall pictures remain in England.

As to the mode of execution as adopted in the Crystal Palace, after making the designs and careful drawings of the ornaments and figures, I gave them to an artist who made stencils of them; the walls were then prepared, and the spaces to be covered traced out with black lines; the patterns were then distributed among fifty or sixty men, each taking his particular department. Encaustic painting was used for the Byzantine, and oil painting for the Mediæval Court, and the result I think goes far to prove the excellence of the former medium. However, distemper painting for a church, where the walls are not damp, is equal, if not superior, to either. At a church at Hawarden, in North Wales, decorated under my direction five years ago, there was no sign of the colours having faded, though everything was done in distemper.

THE BUILD AND HISTORY OF THE VIOLIN.

The remarks upon Mr. Webster's artistic impersonation in the *Builder* of the 21st ult. lead me to think that a few words upon an instrument which, for disputed origin, singularity, compactness, simplicity of construction, power of delineation, and universality of adoption, has not its equal, may not be unacceptable to those who view the progress of science on its broadest and most comprehensive basis.

The poetical speculations of Pythagoras, Athenagoras, Varro, Lucretius, and others, upon the origin of music; Plato's reference of the invention to the Egyptian deities, Osiris, Isis, and Hermes; that of the Hindoos to Brahma, and all the other references to mythology, classic and barbarous, are received in these matter-of-fact times at their exact value—a smile.

As in most cases where origin is obscure and benefit extensive, many nations have claimed the honour of the first thought; and, as usual, the lovers of the classic have affected to trace its beginnings to remote antiquity, and accordingly find its type in the meagre descriptions handed down to us from the Greeks. In some ancient Greek tablets, dating, according to Professor Murchard, 709 B.C. it is stated that "Pherekydes stretched four strings upon a piece of wood, and played upon them with a smooth stick." This instrument was called the "epigonion." Its derivation, however, *επι, supra, γονε, genu*, would seem to indicate that its position must have been that of a violoncello. The stick, however, was most probably an instrument of percussion, and the tone a fable. Euphorion, on the

Isthmian Games, describes the "Magadis" as touched by the *plectrum;* and Philostratus of Athens, describing Orpheus and his lyre, says, "in his right hand he held the *plectrum*."

What the *plectrum* really was, however, we cannot now say;—the translation into "*bow*" being a mere make-shift for want of a real equivalent. Baillot, in his "*Méthode du Violon*," says, "The violin is presumed to have been known from remotest times," and again, "this form bears much affinity to that of the lyre, &c. Unfortunately, however, for these theories, the few statues extant, supposed to be antique, representing Orpheus or Apollo playing upon a viol with a bow, have been proved spurious by high authority, as Winkelman, and others.

But these speculations are very unprofitable. The fact is, that the period when the violin may be said to have originated was when the important discovery was made that the drawing over the strings a certain material, such as horsehair, covered with a resisting medium, such as resin, would produce a powerful and continuous sound. This discovery of the principle of the bow was as important for the developement of the violin, and with it of music generally, as that of the steam-engine for mechanical, or gunpowder for explosive power; and, therefore, setting aside the flowery fictions in which so many writers love to indulge their taste for allegory, and extricating ourselves from the realms of mythicism, we enter the regions of reality, and first touch *terra firma* somewhere about the tenth century. In the Cottonian Collection in the British Museum is a manuscript of the Psalms of David, in the frontispiece to which that monarch is represented playing on the harp. Before him stand four "gleemen," one of whom plays with a bow upon a kind of violin. This drawing is perhaps one of the earliest that records that instrument. Other manuscripts prove its existence about the same date.

In the twelfth century the viol was common amongst the Provençal troubadours. They styled it the "viula," whence our viola or tenor.

The state of music amongst the British bards,—the Norman minstrels, descendants of the ancient Scandinavian Scalds,—and the Provençal troubadours, is a subject full of interest. The French used more than twenty instruments in the reign of Philip de Valois, but the forms of most of them are lost to us; but the bassoon, trumpet, flute, hautbois, harp, guitar, viol, cymbals, and drum were amongst them. The Welsh claim the origin, on the strength of a rude instrument of an oblong square shape, called the "Crwth." From this the English doubtless derived their term "crowd," which, with that of "fiddle," obtained until the importation of the perfected article from Italy, when the term "violin" supplanted them. Although the *fidicula* of the Romans had no connection with the fiddle, yet the term "fiddle," doubtless, had with *it;* and the Anglo-Saxon *fithele*, and earlier German *redel*, with their Danish, Icelandic, and Dutch varieties, all own *fidicula* for their original. The hackneyed line recording that "Nero fiddled while Rome was burning," is a fable, no such instrument existing for 1,000 years after Nero's reign.

From the old Norman-French word *viol*, its varieties have derived their distinctive appellations; though for a long period they were only called treble, tenor, and bass viols. The name of *viol di gamba*, from its position between the legs, was for a long time the distinction of the bass variety. Finally, the terms *violone* or *contra-basso*, *violoncello*, *viola*, and *violino*, comprised the distinctive titles of the viol family in its perfected state. To this glorious quartette may be added a fifth diminutive in the *piccolo*, or kit, which latter is held, however, especially sacred to the *maître de danse*. The "rebec" was also an ancient name for the early specimen of the fiddle, and old French writers applied the term *barbiton* to the whole class. In England, says Dubourg, no family of consideration during the sixteenth and to the middle of the seventeenth century thought its establishment complete without a regular set of viols.

Public performers were few till the beginning of the seventeenth century, and vocal music not much cultivated, though in Italy it had attained much perfection. In the reign of Charles I. music suffered long and grievous depression, and during the Protectorate, the cathedral service was abolished, and organs removed from the churches. In Charles the II.'s time, engraved music was introduced, and the science thence advanced to the culminating point.

But few works can be consulted upon the construction of the violin. That of Jacob Augustus Otto, though very short and insufficient, is perhaps most useful. An elaborate work on the matter is much wanted; but so nice is the subject, so fine the thread upon which excellence depends, that it is extremely difficult to *describe* the rules for obtaining it, and like that of the Freemasons, "the secret" is likely to be confined to the craft. An eminent dealer told me yesterday, that after twenty-five years of study he had just produced his *first* violin! The finest models of the instrument were made at Cremona. Hieronymus Amati, at the beginning of the seventeenth century, Antonius Amati at the middle, and Nicholas Amati and Antonius Straduarius at the end of the same, and at the beginning of the eighteenth century, Joseph Guarnerius, were the makers whose instruments have enjoyed the most world-wide celebrity. Many other makers have earned a secondary reputation.

The wood generally used is of three sorts—Sycamore, for back, neck, and sides; Tyrolese soft red deal, for belly; and ebony, for finger-board and tail-piece. Otto divides a violin into fifty-eight parts! Only a maker can be well up in the various models, as amateurs can but rarely see more than one or two at a time. But there is no mistake about their distinctive features, though to describe them would occupy far too much space.

Hieronymus, considered handsomest generally; Antonius, but few extant, and not quite so well finished; Nicholas smaller, generally known as "Small Amatis;" Straduarius, the flattest of all models, but in tone most approved; Guarnerius, also flat and very rare. Maple is also much used in the backs of these makers.

The fine Tyrolese instruments of Steiner differ much in make and tone from the Cremonese. Much fraud has been carried on by dealers in the clever Tyrolese imitations of Steiner and the Italian classics. Amongst genuine makers, those by the two Klotz are much esteemed. A list of German makers of repute will be found in Otto, together with such distinctive features as to make, varnish, quality, &c. as his practical experience could supply.

Many of the oldest specimens of violins—as of paintings—have been much injured by "repairing," so called; and an opinion is abroad that even the uninjured ones have reached their climax as regards tone; but others consider they will yet stand the test of another century or two. The partial failure of the specimens of the great Parisian imitator, Vuillaume, shows how difficult is the art, how uncertain the result.

For lively anecdote and much information, Dubourg may be read with advantage Dr. Burney's "History of Music," too, and his "Musical Tour," furnish much of value in connection with the subject.

These observations are merely intended as a very rough and limited sketch of a large and highly interesting subject, in the hope of awakening a portion of the interest in the reader that actuates the writer. A. F. Ashton.

TIPTREE HALL.

Mr. Mechi has lived down all objectors, and has come to be regarded as a benefactor by the agricultural world. Very justly so, too, for even his failures give the advantage to others of knowing what to avoid, while all may profit by following in those courses which he has shown to be successful. His crops are excellent, though backward, and were pointed to as proving the value of liquid manure as distributed from his tank. Before coming to a conclusion, though, on this head it would of course be necessary to know the consistency of the fluid used, the number of applications, and the quantity of guano also applied and washed in by it. Most valuable results are involved in the success of such a system, results in which the whole kingdom is virtually interested.* We wish Mr. Mechi had given something of beauty to his buildings: it would almost seem that the endeavour had been the other way.

Lord Dundonald's huge steam-plough for pipe drainage was in action, and appeared to lay the pipes at a depth of 2 feet 3 inches, or 2 feet 6 inches satisfactorily. Whether it could be economically set to lay them at the more useful depth of 4 feet, did not appear. There was a model of a steam plough, too, by Mr. Phillips, and a reaping machine by Dray; nor must we omit favourable mention of a winnower and seed-separater, patented by Mr. Salmon, of the United States.

Mr. Mechi had around him about 300 guests, of all ranks and conditions, from the House of Peers, the House of Commons, the Church, the City Mansion House, the studio, the farm, the manufactory, and the shop, and gave an equally hearty welcome to all.†

CHURCH-BUILDING NEWS.

Much Hadham.—A chapel has been erected at Green Tye, in the parish of Much Hadham, Herts. The material is Kentish rag-stone walling and Caen stone dressings, and the style is Early English. The building was consecrated by the Bishop of London, on 18th July. Mr. G. E. Pritchett, of Bishop Stortford, was the architect, and W. Brown, of Lynn, the builder.

Snettisham.—The following were the tenders for reseating and repairs to Snettisham Church, Norfolk. Mr. J. Daws, of London, architect. Opened on the 23rd July:—

Pennington, Lynn	£1,165	0	0
Ringham, Ipswich	1,090	0	0
Brown, Lynn, and Ayton, Attleborough (accepted)	1,038	0	0
Daws, Snettisham	897	0	0
Bainbridge, Lynn	895	0	0

Northampton. The strength of the tower arches in St. Giles's Church, Northampton, according to the local *Herald*, was lately tested by the ringing of the bells. Fears were entertained that the opening of the arches could not be effected without endangering the safety of the tower,—but these fears are said to be now diminished, if not wholly removed. The builder employed in the restoration was Mr. Ireson, and the architect, Mr. Law. The remainder of the alterations, such as re-seating, and fixing apparatus, pipes, &c. for warming, are progressing, so that if funds should be forthcoming the whole of the work will probably be finished by Michaelmas. It appears by the mottoes inscribed on the bells that they were re-cast in 1783.

Woolpit.—On 17th ult. the new portions of Woolpit church were dedicated to divine service. It was exactly three years since the old tower and spire were struck by lightning and destroyed. The new tower and spire were designed by Mr. R. M. Phipson. They are Decorated, and harmonize with the rest of the church. The parapet is of open work. The western arch is pointed. The belfry chamber is supported by a groined ceiling, and under it is placed the font, which thus stands in what makes a baptistry. The contractor is Mr. J. Y. Rednall, builder, of Woolpit. Mr. Simpson, of Stowmarket, executed the stone work. The amount of subscriptions collected from every source and paid away is 1,330*l.*; the estimated outlay, 1,750*l.*; leaving a deficiency of 420*l.* towards which 64*l.* 4*s.* 10*d.* have been received.

Tilehurst.—The consecration of Tilehurst Church, Berks, which is newly built upon the site of the ancient fabric, took place on Saturday before last. The new edifice was designed by Mr. Street, of Oxford, the diocesan architect. It consists of nave, chancel, north aisle, south aisle restored, and south porch and vestry on the north of the chancel. The chancel and porch were undertaken by the late president of Magdalen College, at his own expense; and the transformation of the red

* A trial of it on a large scale is being made at Rugby.

† We go a step out of our way to express the pleasure with which we saw amongst the guests, recently at Leith, Mr Macdonald, to whom the distribution of the *Times'* Fund amongst the sick and wounded at Scutari was entrusted. It seems to us that such services, so ably performed as these were, at the risk of life, deserve some public acknowledgment.

brick western tower (built in the last century) into a tower and spire of Pointed character is being carried out by some of his friends and relatives as a memorial to him. The outer doorway of the south porch is of intricate design, and the inner has marble shafts and mouldings. All the window tracery is new, except in the south aisle, and the whole is Geometrical Decorated in style. Inside, the church is paved with Minton's tiles, those in the chancel being of a new type, the tiles being cut in curved shapes, and effect being obtained by the introduction of green among the more ordinary-coloured tiles. The seats are all open. The font is surmounted with an oak cover about 12 feet high, hung from the roof. The chancel arch springs from marble shafts, and the triple sedilia in the south wall are similarly adorned. An oak screen, with gates, divides chancel from nave, and oak stalls and seats for choristers, with carved finials, are arranged in the western part of the chancel. The chancel windows are of stained glass, to the memory of Dr. Routh. The east window, of five lights, has, in the centre light, the Crucifixion and the Ascension, and, in the side lights, types and antetypes. In the head of the window are SS. Michael and George, and a head of our Lord, surrounded with rays and with angels censing. In the side windows are,—The Song of Simeon and the Presentation in the Temple, and figures of S. Gregory, S. Augustine, and S. Chrysostom, fathers, whose works Dr. Routh had edited. All these windows have been executed by Mr. Wailes, from Mr. Street's designs. The tower has been opened to the church with a new and lofty arch of stone. Externally, the tower was originally built in a kind of Classic style, but, by taking out the old windows, bricking up others, and inserting a new doorway and belfry windows with moulded brick jambs, it has lost its former character, and begins to harmonize with the new church, although the spire is not yet completed. Mr. Street's designs have been carried into execution by Mr. Wyatt, of Oxford.

Tarnham.—The old church here, which has been re-pewed and extensively repaired and beautified, at a cost raised by voluntary subscriptions, was reopened for divine service on Wednesday before last.

Ryde. — The Congregational new church named St. George's, just erected on the site of the old George-street chapel, has been fitted up with many interior points of resemblance to a church. The style, according to the *Hampshire Advertiser*, is Grecian. The western front, which forms the grand entrance, consists of a pediment supported by fluted pillars, surmounted by a cupola. The side facing Melville-street presents a blank space, entirely unrelieved, except by shallow niches or blank windows, the light being entirely supplied from skylights in the roof. The interior is not choked up with galleries, and the whole length of the nave is fitted with open seats. The chancel at the east end is supplied with a circular stained glass window, and the floor is raised in the usual manner, above that of the nave. Instead of the communion-table, however, it was recently decided to place the pulpit in the centre of the chancel, for the sake of uniformity. In the centre of the building is suspended a large circular chandelier. The consecration took place on Wednesday before last.

Chichester.—The restoration of the west front of St. Olave's church has been commenced. Two buttresses were in course of erection, but being found to project half an inch beyond the adjoining houses, they were, on the orders of the commissioners, taken down and set back.

Chippenham.—On Monday in week before last, the new cemetery here was consecrated by the Bishop of Gloucester and Bristol. The burial-ground is divided, part for the Establishment, and part for Dissenters. There are also chapels, architecturally united by an entrance screen, but respectively appointed for the different burial-grounds. The chapels have nave and chancel. The windows are in the Decorated style. There is a bell-turret over the entrance. There is also a cottage for the custo or sexton.

Bridgnorth.—The consecration of the new cemetery took place on Tuesday week. The site is about half a mile distant from the town. A lodge stands on the right of the entrance, occupied by the superintendent and registrar. There are two small Gothic chapels, one for the Establishment, and the other for Nonconformists, the former at the eastern extremity of the ground, and the latter on the north side. The chapels are nearly uniform in design: they are built with stone from Marlbrook quarry, with Bath stone dressings, and the windows are filled in with plate glass. They are after designs by Messrs. Truefitt and Edmiston, of London, architects, and executed by Messrs. Powell and Foxall, builders, Bridgnorth. The cemetery is enclosed by a wall, with rustic coping, built of red sandstone, obtained on the spot. The portion allotted to Nonconformists is indicated by the insertion of kerbstones. The cemetery comprises 8a. 0r. 1p. of which 5a. 0r. 25p. is appropriated to the Established Church, and the remaining 2a. 3r. 16p. to Nonconformists. The land was purchased at a cost of 400*l.*; expense of building two chapels and lodge, 1,200*l.*; walling, 390*l.*; plants, 50*l.*; making roads, 100*l.*; and architect's commission, 100*l.*; total, 2,240*l.* The sum allowed by the vestries was 2,150*l.*

Kingweston.—On Thursday before last, the church dedicated to All Saints, recently built, according to the *Taunton Courier*, by the liberality of Mr. F. H. Dickinson, of Kingweston, with the additional burial-ground, was consecrated by the Bishop of the diocese. The church has a tower and spire of the height of 132 feet. It is built in the Early English or Decorated style of architecture, of Doulting stone and blue lias. Mr. Giles, of Taunton, was the architect. The work was done by Mr. Henry Dawe, of Taunton, mason, under the immediate superintendence of the founder, Mr. Dickinson. The spire lantern stands upon eight windows, so that the peal of bells when rung may be seen at a distance from the church. The interior is laid with Minton's encaustic tiles, and the altar-table is composed of Serpentine marble from the Lizard rocks, Cornwall. The stone corbels of the capitals were carved by Mr. H. Davis, of Taunton, who executed all the carving for the interior of the edifice. The new building stands on the site of the old parish church.

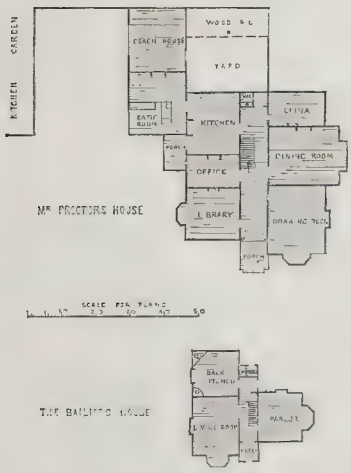
Cheddar.—The consecration of the new cemetery here took place on the 20th ult.

Smethwick.—On Tuesday before last, the consecration of the new church of St. Matthew, in Windmill-lane, Smethwick, took place. The church is intended to accommodate 450 persons, 250 free. Mr. Samuel Briggs was the builder of the edifice.

Willenhall.—Holy Trinity Church was consecrated on Wednesday before last. The church, which has been erected at a cost of 4,500*l.* and accommodates 700 persons, is in the Early English style. The material is a brown stone quarried in the neighbourhood. Externally the edifice is ornamented with a Bath stone bell-turret; and internally with a low pulpit of Caen stone, and a baptismal font of same material, both carved. The roofs of the nave and chancel are open and lofty, and the timbers are stained. Encaustic tiles, the gift of Mr. H. Minton, are laid down in the chancel. All the sittings are without doors, and a large proportion are free. The architect is Mr. W. Horton, of Wednesbury. The builder is Mr. J. Wilkes, of Darlaston.

Ashbourne. — The reopening of Mayfield Church took place on 19th ult. For nearly a year this old church has been undergoing extensive alterations and enlargement. A new aisle on the north side has been added, and an old gallery, which blocked up an arch, has been removed. The old Norman pillars and arches, which before were covered with whitewash, have all been restored and dressed. The church has been entirely repaired, and above one hundred additional sittings have been made for the poor. Mr. W. Evans, of Ellastone, builder, was employed.

Rowsley. — On Wednesday before last the church of St. Catherine, recently erected in the picturesque vale of Rowsley, was consecrated by the Bishop of Lichfield. The edifice is in the Norman style. It has no galleries, and the seats or stalls are confined wholly to the body of the church. A memorial window of stained glass has been placed over the communion-table in the chancel, to the memory of Catherine, the late Lady John Manners. In the centre compartment are two groups of figures, emblematical of the resurrection, with an inscription in old English characters. This window has been designed and erected by Mr. T. Williamont, of London. The Commandments have been painted on zinc, with illuminated borders and initial letters, by Costell, of London. The site of the building, which was presented by the Duke of Rutland, is a small eminence, in a road leading from Rowsley to Manners' Wood. The architect was Mr. Anthony Salvin, jun. of London; and the builders were Mr. Hibberd and Mr. Ellis, of Bakewell. The church has been dedicated to St. Catherine, "after the name and in honour of the late Lady Manners." The cost of the building and appurtenances was 800*l.*



Leyland.—St. James's Church, Leyland, was consecrated on Wednesday week, by the Bishop of Manchester. The church is in the Early English style, and consists of a nave, north aisle, and chancel, with a tower at east end of nave. The walls are of Whittle Hill stone, with dressings of Longridge stone. The nave is 50 feet long by 25 feet wide, with trussed rafter roof, continuous over the chancel, which is of same width as nave, and 25 feet in length. At the western end of nave, an arch opens into the tower portion of the building, and is intended for the church scholars. The north aisle is of same length as nave, with which it communicates by three arches, supported on octagonal columns, with moulded caps. The square tower, with buttresses, is surmounted by an octagonal spire, pierced by eight quatrefoil lights: the height of the vane from the ground is 148 feet. The roof is an open one of framed timbers, and stained firs, covered with green Westmorland slate. The fittings are of a simple character, executed in pitched pine. The building is calculated to hold between 400 and 500 persons. The east end of the church is lighted by a stained glass window, the work of Mr. Warrington. The subject of the central light represents the mother of Zebedee's children soliciting that her sons might sit on the right and on the left of our Saviour in His kingdom. In the right-hand light is a portrayal of Jesus, suffering little children to come unto him; and the left-hand light represents the deed of the good Samaritan. The church is heated by hot-water apparatus. The parsonage and stabling are situated on the south side, and are built in the old English style, with brick walls, and stone dressings to the windows, &c. with lofty chimneys in ornamental brickwork. The entrance from the road is opposite the north porch, and consists of a small bridge across a sunk fence: on this is placed one of the old oak litchgates, covered with a stone roof. Mr. Ewan Christian was the architect employed on the erections; and Mr. W. H. Espinett, also of London, has superintended the progress of the work. Mr. Armstead, of Preston, was the contractor; and Mr. Aughton, jun. sub-contractor. The land was given by the Misses Ffarington, but the church has been built at the sole expense of Mrs. Ffarington. The outlay has been between 3,000*l.* and 4,000*l.* The workmen employed on the works, with several of the contractors and others, celebrated the opening by a dinner at the Union-hall, Leyland, when about 120 persons were present.

WALLS' COURT FARM, NEAR BRISTOL.

To complete the illustration we annex a view of Mr. Proctor's residence, and one elevation of the bailiff's house, together with sketch-plans of both. The residence is situated at a short distance from the farm-buildings (see page 342, *ante*), and the bailiff's house is at Stanley Farm, adjoining, which belongs to Mr. Proctor.

Both are built of the local stone, with Bath stone dressings. In the residence, however, the inner face of the walls is of brick, as it was feared, the stone being non-absorbent, that damp would show. The house is raised on a turfed slope, and has a prospect tower, from which the whole of the farm and lands may be viewed. We will not venture to speak of its convenience.

RESIDENCE, WALLS' COURT FARM, NEAR BRISTOL: AND BAILIFF'S HOUSE.—Mr. Godwin, Architect.

PROVINCIAL NEWS.

Cardiff.—The new dock was opened with great ceremonial and rejoicing on Friday before last. The dock now opened is but one-half of the intended size; and operations are actively being proceeded with, to carry out the whole project. The new dock was commenced in January, 1852. It is of the following dimensions:—Length of locks, 220 feet; width of locks, 55 feet; length of basin, 380 feet; width of basin, 250 feet; length of dock, exclusive of extension, 1,000 feet; width, 300 feet. The extension, which it is expected will be completed in December, 1856, will give a total length of 3,000 feet. The contractors are Messrs. Hemmingways and Pearson. There are already coal shipping machines provided; and it is intended to place two lines of rails on the east side—one, of the Rhymney Valley Railway, and the other a branch of the South Wales; and on the west side there will be connecting branches with the Taff Vale. All these lines will find traffic in the large quantities of iron and coal which this dock—calculated to accommodate 200 per cent. more shipping than the old dock—will require. The day of opening was observed as a complete holiday, with public dinner and ball, fireworks and illumination, &c. and a feast to the 700 workmen employed by the contractors.

Warrington.—The borough surveyor, Mr. B. Coxon, has been appointed, by the town council, inspector of nuisances, and Mr. Hackey, deputy inspector. ——It is rumoured that through the instrumentality of the rector, the Rev. Mr. Quekett, steps are about to be taken for the establishment of model lodging-houses in this borough.

Lynn.—The local Baths Committee, on Monday before last, met to open tenders for the construction of public baths here. Only two were received, viz. Mr. M. Bambridge, 1,792*l.*; and Mr. J. Stimpson, 1,450*l.* As the committee have only 1,250*l.* to lay out, they have requested the architect's advice on the subject, and it is presumed the plans will have to be reduced.——The first stone of the new Workhouse was laid on Monday in week before last. ——Measures have been taken for the much required ventilation of the Corn Exchange, by raising a portion of the roof so as to form a kind of lantern. Plans for the purpose were recently laid before the committee by Mr. Maberley, the architect, and the tender of Mr. John Laird, to execute the works for 80*l.* has been accepted by the town council. It appears from a statement in the *Norfolk Chronicle*, that the receipts from the Exchange from the opening to 19th ultimo, have been 438*l.* 10s. and the expenditure 64*l.* 12s. 6d.

Hartlepool.—The works at the New Dock here are making progress. Considerably over 300 workmen are daily employed upon the masonry and excavations, and it is anticipated that the dock will be ready for opening during the first week in October. The works connected with the Graving Dock are also being pushed forward.

Glasgow.—At a meeting of friends and patrons of art, held in the Council Chambers, under the presidency of the Lord Provost, a committee has been appointed to raise subscriptions for the maintenance, as a Museum of Art in Glasgow, of the collection made by the architects for the Scottish Exhibition. A sum of 3,000*l.* is required to free the promoters from personal liabilities. The proceeds of the exhibition pay all current expenses.——The New Suspension-bridge over the Clyde, at the Humane Society's House, is approaching completion. The approaches have been laid out, and planks to form the footway are on the bridge.

Hamilton.—The new militia barracks here in course of erection, consisting of 15 one-story houses, each 50 feet in length, will accommodate four sergeants and 449 privates. There will also be a cooking-house, 50 feet by 18. The new erections occupy a line of 850 feet, along the barrack boundary wall, which forms one of the side walls of the houses, and is fully 2 feet thick. The opposite side walls and gables are of brick. The height of the side walls is 10 feet; length of each room, 50 feet; width, 18 feet 8 inches. The riding-school has been turned into a men's mess-room. The contractor is bound to have the new barracks done within less than two months.

SURVEYORS' CHARGES.

POLAND *v.* TEBBUTT.

This was an action in the Bloomsbury County Court, a notice of which appeared in our last impression. It will be in the recollection of our readers that the case was adjourned in order to enable the plaintiff to produce evidence, that the charge of 1*l.* 1s. for going over the extra work, and settling the accounts of these extras, was really in the nature of commission, the principle affirmed by the judge (Mr. Heath) being, that where surveyors charge by *commission*, they are precluded from adding any charge for *time*. There was also another item of 1*l.* 1s. disputed by the defendant, for resisting an encroachment, by the defendant's neighbour, in some alterations that were about being made under the direction of Mr. Knight, a surveyor. Mr. De La Mare was now instructed on behalf of the plaintiff, and Mr. Williams, as before, appeared for the defendant.

Mr. Brown, the builder, who had made the alterations, was now called, and stated that in addition to the 124*l.* for the original repairs, he had received the further sum of 24*l.* for extra work, which had been duly superintended by the plaintiff in the ordinary way.

Mr. Williams now submitted that, as to this item the plaintiff could not recover, as by the custom of the profession commission was never charged upon extra work! This assumption was negatived on the part of the plaintiff by his personal evidence.

The Judge said, he was clearly of opinion that the plaintiff was entitled to commission on all sums actually paid to the builder. This item must, therefore, be allowed, unless special cause was shown to the contrary.

As to the encroachment, evidence was given that the plaintiff acted as the defendant's surveyor, and adopted the plaintiff's suggestions.

The learned Judge thereupon allowed this item. The result of the whole case was, that the postage 2s. was taken off, and it was held that the charge of 1*l.* 1s. for the preliminary survey of the premises was included in the charge for commission; and the sum of 1*l.* 3s. thus being taken off, the sum of 8*l.* 6s. was allowed as the plaintiff's claim.

Mr. De La Mare then applied for costs, and after a lengthened controversy, the costs of the plaintiff's attorney, and all his witnesses, were allowed.

ZINC PAINT.

As an interested party in the question lately treated in your useful paper relative to the advantages of White Zinc Paint, I hope you will allow me to offer a few observations, referring particularly to the substance of the article of 26th May (p. 243, *ante*).

The article says, that "If the work is to have the maximum of durability, the turpentine should be reduced to the smallest possible quantity, because in the oil is the principle of stability."

To a great extent I agree with this, and thence one of the greatest advantages of oxide of zinc as a paint, the absorbing quality of this oxide being far greater than that of any material hitherto used as a pigment; but therein, also, may be the cause of certain disadvantages if this absorbing quality be abused: a quality good in itself may become a defect if unduly treated.

The important point which must be kept in view in order to insure a durable, clean, and well-covered surface, is the extent to which the oxide of zinc is to be allowed to absorb the oil in mixing; and allow me to state that in practice the unrestricted admission of the principle, that the greater the quantity of oil absorbed the more perfect the paint, has led to great mistakes.

Our experience in the use of zinc paint, which has been for several years very extensive on the Continent and in America, has taught us that there is a very exact medium to be observed in mixing this paint, and that allowing the oxide to imbibe too much oil is quite as objectionable as the contrary.

If too freely diluted with oil, two prominent defects will be found to result.

1st. Too great transparency, causing want of covering power.

2nd. A constant, although imperceptible oozing out of the excess of oil: thence the perpetual formation of a slight glutinous coating on the surface, which attracts and retains every particle of dust or dirt floating in the air which is brought in contact with it; and this effect will continue for a considerable time,—in fact, until all the superfluous oil has thus slowly evaporated, and the paint definitively hardened. This alone is the real cause of the failing which you have observed.

In consequence of the great durability of the colour of zinc paint, a house painted with it may be washed for a succession of three, four, and even five years; and after each successive washing the surface will be found as clean and bright as when fresh painted. Of this fact there are even in London several instances to show. This circumstance mainly led us to consider the fact I have just submitted to you, and to seek for a remedy. In the first place we found that exterior surfaces, painted with zinc too freely diluted with oil, on the usual assumption that the more the oil the better the paint, foul very rapidly, and require frequent washings to be kept clean; but we at the same time discovered, that after each washing these surfaces remained clean for a longer period, and this because such successive washings carried off the thin glutinous coating formed on the surface by the exuding of the oil, and rendered its re-forming less frequent, and more imperceptible as the superfluous oil became diminished. We also remarked, as would naturally follow, that surfaces painted flat (with more turpentine) did not foul as surfaces painted bright with more oil. It was also found, that where oil to the full extent of the absorbing power of the oxide was used, it covered less effectually than lead paint. Hence it became our object to ascertain the exact proportion of oil required to ensure the greatest durability of the paint and efficiency of covering, without causing the defect of softening and fouling, and at the same time the due proportion of turpentine to be added, so as to give the paint the degree of fluidity required to ease the labour of spreading, without producing such transparency as would be detrimental to its covering power, or giving it a tendency to pulverise, which would be the case if turpentine were added too freely.

In fact, all objections to the use of zinc paint may be traced to the difficulty of arriving at the exact necessary proportions of oil and turpentine; perhaps, also, to a little special practice in laying on a new material. It should, however, be remembered, when zinc and white lead are respectively properly mixed, and equally liquid, that the former invariably contains more oil, and is at the same time lighter and more easily spread, and that it will cover equally well, and paint a larger surface, in proportion to its weight.

I think it will be generally acknowledged, that if a material has been found free from the several disadvantages attached to the use of white lead, and equal, if not superior in its advantages, it would be conferring a benefit on the public to demonstrate the fact; and if, therefore, any experiments should be suggested to show that such is the case in respect to zinc oxide, I shall be most willing to take part in conducting them, and giving such suggestions as our experience has pointed out to us as being practical and true.

For the Vieille Montagne Company,
R. G. Fisher.

DUTIES OF DISTRICT SURVEYORS.

Our attention has been directed to a clause in the Metropolis Local Management Bill, which, as it seems to us, ought not to be allowed to remain, and we trust that its omission will be arranged for in the House of Lords. The clause is as follows:—

"Every district surveyor acting under the Act of the session holden in the seventh and eighth years of her Majesty, chapter 84, or under any Act repealing or amending the same, shall without any fee or reward enforce the observance of this enactment [as to the non-occupation of underground rooms not in accordance with certain requirements], and proceed for the recovery of penalties thereunder, and report periodically, and otherwise, as the said Metropolitan Board may order, to such Board, all cases in which rooms or cellars are occupied contrary to this enactment in the district of such surveyor, and also to the respective vestries and district Boards all such cases occurring within such parts of his district as may be within their respective parishes and districts, together with the particulars of the cases in which proceedings may have been taken for penalties, and the result of such proceedings; but nothing herein contained shall be construed to disable other persons from enforcing this enactment, and taking proceedings for penalties thereunder."

A duty of this kind is altogether apart from the duties of the district surveyor as marked out by the Buildings Bill, and should devolve on the police or inspectors of nuisances. It would seem to be a duty without end, requiring constant attention, and would take off the district surveyors from their proper province, enforcing attention to the constructive requirements of the Buildings Act. All are interested in having for district surveyors men of high standing and professional knowledge; and this clause, if it be permitted to remain, will unquestionably tend to keep such from the office.

Irish National Gallery.—The estimated cost of the new Irish National Gallery is 11,000*l.* of which Government contributes 3,000*l.* this and the same sum next year, making 6,000*l.* in all. The remaining 5,000*l.* is made up of subscriptions to commemorate the public services of Mr. Dargan.

SPONTANEOUS COMBUSTION.

Referring to your notice of Dr. Inman's work on the above interesting subject, in the *Builder* of last week, I am tempted to describe an instance of spontaneous combustion, which occurred on my own premises a few years ago, and may serve as a warning to others.

The roof of a large coal-shed was one day discovered to be on fire, which was, fortunately, quickly extinguished, but occasioned much surprise as to how it could have originated. On examination, I found the tiles were destroyed on part of the roof, and the rafters, which were old and rotten, exposed to the sun and rain. A quantity of fine coal-dust had settled on the upper surface of the rafters. The weather was hot, with occasional showers, and I suppose a kind of fermentation of the rotten wood* had taken place, and ignited the coal-dust; at any rate, after minute inquiry, no other explanation of the mystery could be arrived at by A. S.

A correspondent, Mr. W. Brotherton, points attention to the use of oils in manufactories, steam-vessels, &c. as a cause of combustion, spontaneous or otherwise. These oils, he remarks, are but too generally adulterated with the cheaper volatile oils, and, from friction and heat, they rapidly disappear, but still pervade the atmosphere of places where they are used, often, indeed, penetrating to and collecting in spaces apart from these, and giving rise to fires, either from spontaneous or communicated causes. Foreign oils of a poisonous description, he also states, are often mixed with the same materials, and are supposed to give rise to heretofore unaccountable diseases; whereas if the oil of the rape plant were cultivated to a sufficient extent to supply the enormous demand, such evils would be obviated, and much good would ensue, both to our agriculturists, our manufacturers, and all who use such oils, or breathe the atmospheres in which they are used.

Notices of Books.

Homes for the People, in Suburb and Country: in a series of 100 original designs. By Gervase Wheeler, Architect. New York: Scribner. London: Trubner. 1855.

It is quite possible that the information here gathered together may be useful in America; in some respects, even in England; and that if the work had been done in an honest, honourable manner, we should have thought the compiler of it entitled to praise. So far, however, from this being the case, if we may judge from that which comes immediately within our knowledge, the author has appropriated the writings of others in the most extraordinary manner, without the slightest acknowledgment.

He has thus laid under contribution the series of papers on the History of Architecture, first published in our journal in the shape of Letters to a Lady, and afterwards in a volume, under the title of "History in Ruins,—a Handbook of Architecture for the Unlearned." We have placed a couple of passages side by side to prove our case:—

"*History in Ruins.*"	"*Homes for the People.*" (Page 20-21)
"We are apt, in the business and bustle of to-day, to forget too entirely the past: everything which serves to take us back to the early periods of the world's history, to force upon our notice the age of prophecy, the foundation of Christianity, the rise and fall of states, must tend not merely to interest, but to expand the mind; will enable us to estimate rightly our present position, and, by showing what *has* been done, assist us in making further advances. You will see at once, too, that by a knowledge of architectural history, and the peculiarities which characterise the works of various people and epochs, the pleasure of travel is greatly increased: every stone is suggestive of an idea, and every old building becomes an open book, wherein with this knowledge those who run may read."	"We are too willing, amid the hurry and the business of to-day, to forget utterly the past. In our struggle onward, we have little time for a backward glance; and yet, everything that may help to lead us back to the early world's history, that may serve to force upon our attention the age of inspiration—the rise and fall of nations, the planting and the spread of Christianity, must tend not merely to interest, but to expand the mind. So may we learn duly to estimate this our own position, and by knowing what has been done, gain a power for further advances. At least let me claim that, by some knowledge of architectural history, and of the peculiar characteristics of various epochs of art, the pleasure of foreign travel (now so widely sought) must be greatly enhanced; for every stone would then be the token of an idea, and every old building an open book, and 'sermons in stones' be read and understood."

* More probably of sulphuret of iron in the coal, while the rotten wood would be a kind of touchwood, or tinder, to foster the combustion.

"*History in Ruins.*"	"*Homes for the People.*" (Page 108-9.)
"The houses [of the Greeks] were very plain, and contrasted strikingly with the public buildings: they sometimes stood back, within an inclosure of their own, and in front had an altar of Apollo, or a bust of the god Hermes. Inside, the houses were but simply adorned; yet we hear of painted ceilings in the time of Plato, and, at a later period, coloured stones were used, and mosaics. "I could almost wish that there was a memorial of the mythic Apollo before every Hodge-to-day Apollo, always youthful,—Apollo, the representative of music, and eloquence, and poetry! What do we find in too many of our houses? Not a picture, not 'a thing of beauty' of any description; often not a thought of it. Even where thrift and carefulness reign, there sometimes shines no joy; and the clay-bound spirit never reaches its right elevation: the occupants groan instead of living. But there is a Bible on the window-sill, you will say: we want not Apollo. True. We have deeper consolation, purer teaching, higher incitement than the poor, dark Greek; but The Book scarcely required white ceilings, drab walls, gloomy looks, constant care; lamentations for ills which are not, and never may be; thoughts only for the animal life; a shutting out of the light, and refusal to be joyous. If you do not know of such houses, you are lucky in your friends,"	"Centuries ago, the people of Greece were accustomed to erect in the small court-yard invariably in front of their private houses, a bust, or statue of the god Apollo, the mythic representative of lively art, the joyous and youthful patron of music, eloquence, and poetry; this to be a constant teaching of the usefulness of cultivating acquaintance, in their daily going out and coming in, with the softening and elevating influence of material beauty. Would it not be well in our day to metaphorically erect a statue of Apollo in the court-yard? "In early days, the cross was planted before the doors of many Christian homes; and its teachings were still the same; for the holy emblem was invariably made 'a thing of beauty,' breathing strains of hope, not groans of gloom. Shall not our court-yards be in spirit so adorned? "In present times, a custom is to plant sweetly-smelling and cheerful-looking flowers before the house door: these may teach the lessons of older times, as told by Apollo and by Christian emblem—may show that where thrift and carefulness reign may shine a cheerful joy—and that thoughts only of the animal life, refusal to be joyous, constant care, are not required by *The Book* upon the table, that takes the place of the heathen god in the court-yard. Our deeper consolation, purer teaching, higher aims, than those of the darkened Greek, should show recognition in the evidence of grateful appreciation of the beauties found so lavishly around us: the added comforts and superior conveniences of our homes to those of our Christian forefathers should make us strive to emulate in our works the spirit which gives to those of our fathers a beauty and a use."

When we add, that no reference whatever is made to the source throughout Mr. Wheeler's volume, the justice of our complaint must be evident. This is not the first time the little book in question has been made use of by others, but this instance is certainly the most barefaced example.

Improved Dwelling-houses for the Humbler and other Classes, based on the Scottish Dwelling-house System. By William Chambers. London: W. and R. Chambers, Paternoster-row. 1855.

The substitution of the horizontal or flat system of building dwelling-houses for the ordinary perpendicular system, especially in London, we have often urged in these columns, so that the subject is not new to our readers. For more detailed particulars, however, as to the former system, than our limits allow us to give, we are glad to be now able to refer all interested, and particularly our professional readers, as well as capitalists, to the precise and clear conception of that system which a perusal of Mr. Chambers's tract will afford them. It contains much information as to the flat system as it is practised not only in Scotland but also in France, the adoption of which latter modification in London Mr. Chambers recommends,—at least so far as relates to the appendage of a porter or general attendant to look after the common stair, outer entrance, &c. of each of the higher class tenements of "houses" or flats; although in many cases the additional expense thus incurred may not be considered necessary, especially in the tenements of cheaper and smaller dwellings so much wanted about London. In respect to the endeavour to introduce the flat system in the metropolis, as at Victoria-street, Westminster, Mr. Chambers says:—

"In certain new tenements lately erected in Victoria-street, Westminster, an attempt has been made to introduce into England the plan of dwellings in flats; and there the common stairs are placed in charge of a porter or porteress, who opens the door to all visitors. With this commendable improvement, however, the plan of accumulating separate dwellings under one roof is not presented in a form which is likely to be popular. In one case, the intervention of *entre-sols*, and in another the erection of low parasitic buildings behind, as residences for the shopkeepers, are fatal objections. The very putting of shops in houses of this class, with no adjoining neighbourhood for their support, seems an error which it would be well for speculators to avoid. From whatever cause, the flats in question are charged with rents far beyond the means of those class of persons who might be expected to occupy dwellings of this kind. On lately making personal inquiry, I learned that for a first floor, raised to a great height by reason of an *entre-sol*, the yearly rent (rates and taxes included) was as much as 120*l*. For a second floor in another tenement, consisting of only three rooms and a kitchen, and possessing no accommodation whatever for a servant, the yearly charge was 90*l*. Possibly, other dwellings of this kind in or near Victoria-street may be cheaper, but the sums just specified at least indicate the general extravagance of the charges which are made; and after making all allowances for local circumstances, I am inclined to suppose that some great architectural or financial blunder has been committed by the parties concerned. The price of timber, glass, slates, locks, hinges, and some other materials, can be no greater in London than in Edinburgh; and as it may be imagined that any excess in the price of labour would be compensated by the low cost of brick in comparison with the heavy outlay for polished sandstone, one is at a loss to understand why, as regards mere construction, a substantial and commodious tenement on the Scottish plan could not be produced as cheaply in the environs of London as in Edinburgh or Glasgow. In examining the Victoria-street buildings, it may be noted that the floors are placed on iron beams and arches, as a precaution against fire—an arrangement shown to be unnecessary for properly built edifices of this kind, and by which, as well as from some other oddities, the cost of construction is possibly increased. Be this as it may, it is matter of regret that the attempt to introduce into London, buildings on the Scoto-Parisian plan, should not have afforded a more correct idea of the original; and it is only from observing this unfortunate failure, of what was no doubt a well-meant scheme, that we would venture to recommend a new course of procedure."

For this new course of procedure we must refer our readers to the tract itself, and its illustrations.

In allusion to a very much wanted class of dwellings,—those namely of 15*l*. to 20*l*. rental, Mr. Chambers says,—

"Advancing to a still better class of dwellings, much in request, we arrive at those which embrace two rooms, with a bed-closet, kitchen, scullery, water-closet, and other conveniences — rent, from 12*l*. to 16*l*. or what in London might be from 15*l*. to 20*l*. per annum. The best specimen of a tenement of this class which has come under my notice, is one lately erected, as a private speculation, by a gentleman at Port-Hopetoun, a suburb of Edinburgh. This large building, forming the corner of a street, consists of flats, reached by two common stairs. Each dwelling consists of a kitchen and two rooms, with closets of various sizes, a scullery, and other conveniences. The rents are from 12*l*. to 16*l*. each, making a money-return to the landlord of at least 7 per cent. per annum. The chief peculiarity of the structure is, that it is pierced from top to bottom by shafts, which afford light and air to the water-closets in the several dwellings. These shafts have a glass cupola, with louvre-boards for ventilation."

The author formally dedicates this useful tract to "Capitalists, architects, builders, and generally all who may feel interested in promoting the erection of improved dwelling-houses at a moderate rent in London, New York, and other large seats of population."

Miscellanea.

Cracks in Lead.—Upon a roofing of lead subject to the frequent tread of the foot, and exposed to the excessive heat of the sun, I wish to apply to certain damaged parts a composition which would be a preventive to the water oozing through the crevices at the time of rain, and would likewise remain hardened and adhesive under a summer sun. Soldering, from the spreading of the lead by the frequent tread, cracks, and again exposes the crevices to rain. Gas-tar, mixed with a good proportion of rosin, and applied in a high state of heat, becomes again melted by the sun's heat. If any of the readers of your paper be in possession of an efficient remedy, and would name it in your columns, I should be much obliged.—G. S.

Loss of Antiquities for the French tional Museum.—Letters from the East intimate t the greater part of the collection of antiquities de by M. Place and M Fresnel, at Babylon, have n lost just above the confluence of the Euphrates l the Tigris. The advices state that they were eral feet under the alluvial soil, into which they had k in four fathoms water. Mr. Holland, com- nding the Hon. East Company's steam-ship *Comet*, nired to the spot, sent down divers, who ed every rtion to recover them, but without s ess. Of the ole of this magnificent collection only two rafts, taining fifteen sculptured figures, and one large bull, ached Bussorah in safety.

Sussex Memorial.—The first stone of a new ng to the Royal Free Hospital, London, to serve as nemorial of the late Duke of Sussex, was laid on onday last, with Masonic honours.

A Singular Lightning Stroke at Birmingham.—If last season was remarkable from want of under-storms, the present is equally remarkable om their number and intensity. A strange incident curred during the great thunder-storm which re- ntly passed over Birmingham. The workmen em- oyed on the Independent College, in course of erec- on on Moseley Common, near the Stratford-road, ok shelter in a couple of wooden sheds, thirty or rty yards from the building, and from each other ne of these is used for the workmen's tools, and in some thirty bricklayers took refuge. Separated om the tool-house by a wooden partition, is the ilder's office, in which was Mr. Beeson, the clerk the works. The other shed was occupied by renty stonemasons. They were not many minutes eltered when a lightning flash prostrated to the rth the whole party of fifty. A noise like the crack a percussion cap (the well-known sound of the ectric force in action), preceded the peal of thunder. wo or three minutes elapsed before any of the party ere able to rise, and one, the foreman of the brick- yers, remained quite unconscious for upwards of a uarter of an hour. A sensation as of scalding led the discovery that their bodies were more or less istered, several being nearly covered with watery tches, varying in size from a hand's breath down- ards. The stonemasons do not appear to have been sited so severely, as none of them were blistered. he lightning descended a scaffolding-pole at the cor- er of the building nearest the sheds, scooping out its bstance, from top to bottom, as cleanly as if it had een the work of a gouge or chisel, burning the ropes y which four ranges of scaffolding were tied, and ipping a heap of bricks below as if with hammers.

British Archæological Association. — The rogramme for the meeting in the Isle of Wight, om August 20th to 25th inclusive, is as follows:— Monday.—Public Meeting in the Town-hall of New- ort; President's Address; Introductory Sketch of he Antiquities of the Isle of Wight, by Mr. Petti- rew; Exhibition of Plans of the Town of Newport; ecture on the Municipal Records of Newport, by Ir. W. H. Black; Inspection of the Town; Remains f St. Thomas's Church; the Grammar School; Museum of the Isle of Wight; Evening Meeting at Newport for Papers, &c. Tuesday.—Visit to Caris- brooke Castle; Remains of Priory; Carisbrooke Church; Shalfleet Church; Newtown; Site of An- cient Francheville; Examination of Ancient Docu- ments; Evening Meeting; Papers. Wednesday.— Visit to Calbourne Church; Longstone; Mottistone; Brixton Church; supposed Site of Roman Villa; Westcourt; Manor House; Shorwell Church; Row- borough; Ancient British Town of Gallibury; Evening Meeting at Newport; Papers. Thurs- day.—Visit to Niton; Puckastor Port; Ventnor; St. Lawrence Church; Bonchurch; Examination of Barrows on Wroxall Downs; Evening Meet- ing; Papers. Friday. — Visit to Southampton; Reception in the Audit House; Examination of the Ancient Walls and Fortifications; St. Michael's Church, &c.; Lecture on the Corporation Documents, by Mr. Black; and on Saturday, closing Meeting and Visit to Netley Abbey.

Sharp Practice.—The "Country Architect's" paragraph headed "Sharp Practice," I did not at first think worthy of my notice. I will, however, for the sake of *truth*, just state what passed between the vicar and myself. The vicar is a personal friend of mine, having known him for upwards of twelve years. I called on him when in that part of the country, as I frequently do. I had no idea that it was his intention to build a cemetery chapel, until he named it to me, and asked me to make a design: no other architect's name was ever mentioned to me as having been applied to; and, in accordance with the vicar's wishes, I sent him a *pen-and-ink sketch*. The framed and glazed lithographs which are stated to have "accompanied" this "elaborately got-up design," were presented to the vicar twelve years ago, and out of compliment to me he had them framed and glazed.

A Town Architect.

Grimsby Docks.—These docks, and the railway in connection with them, are prospering. During the past half-year the local goods traffic on the railway increased 23,746 tons, and the foreign goods traffic 31,728 tons. The coal traffic increased 15,402 tons. The shipping shows an increase of tonnage amounting to 2,715. The directors have modified the wharfage charges for coastwise timber and grain. The construction of a graving dock, corn warehouse, and additional conveniences for the shipment of timber and coal has been contracted for at 26,817*l*.

Stone for Doncaster Church.—The new building is rapidly progressing under the direction of Mr. Scott. It is supposed, nevertheless, that it will yet require more than two years to complete it. It was commenced with a stone called Steetby, but the architect, we are informed, has now adopted the Ancaster stone from the quarries belonging to Mr. John Wilson, which supplied the material for many of the ancient churches in Lincolnshire. We gave particulars of these quarries, it may be remembered, some time ago.

English Patents.—The *Mechanics' Magazine* of 7th ult. contains an account of Mellish's patent obliquely perforated glass ventilators, which, in their most recent and improved form, consist simply in cutting any approved pattern on the opposite sides (upper and lower edges) of a series of strips of glass, which being brought together, form a window-pane impervious to rain or direct currents of air, but constituting, it is said, an efficient ventilator. Under the head of specifications of patents recently filed, in the number of the same journal for 28th ult. is the following:—"Arnold, Joseph, of Tamworth, Stafford. A new mode of ornamenting bricks, and other moulded articles for building purposes. Patent dated Jan. 2, 1855. (No. 9.) In order to mould bricks with ornamental surfaces, the inventor cuts or engraves a die representing the required design, and applies this die as the side of the mould in which the moulded article is to be formed. This die is not permanently fixed to the mould, but is applied in such manner as to be capable of being readily removed." Provisional protection has been granted to George Antoine Tabourin, of Lyons, France, student, for a new system of metallic arch, proper for the construction of bridges, arcades, vaults, roofs, and all other such purposes; and to Charles Hide, of Worthing, Sussex, for improvements in connecting earthenware pipes or tubes. A patent has been applied for, with complete specifications by William Pidding, of Putney, Surrey, for improvements in the manufacture of building materials.

Machines exhibited at Carlisle.—A new brick machine, Boydell's steam-horse, and various reaping machines, were exhibited in action at the late meeting of the Royal Agricultural Society at Carlisle. The brick machine was exhibited by Messrs. Porter, Hinde, and Porter, of Carlisle. At the first trial it did not come up to the mark, but it afterwards, according to the newspaper reports, threw off 18,000 well-formed bricks in an hour. The machine effects the two processes of pugging and moulding the clay almost simultaneously. The bricks are cut in the direction of their bed, so that the four sides are preserved smooth, while the top and bottom are slightly roughened, so as, with the perforation of the centre, to secure the proper adhesion of the mortar and consequent safety of the building. The steam-horse is said to have made a successful *début*, notwithstanding some reports to the contrary. Having been put to many tests, it was fixed to a digging machine made by Gibson, of Newcastle-on-Tyne. This implement consists of a series of long hook-shaped prongs, which revolve on a common centre; the prongs striking into the soil by the weight of the machine, and tearing up the ground as the instrument advances. Great power is said to be required for the motion of this implement, so that it put the steam-horse to a severe test, which, nevertheless, it encountered and overcame. The competing reaping machines were Bell's, with Croskill's improvements; Lord Kinnaird's, manufactured by Barry and Leigh; Hussey's Improved, by Dray; M'Cormick's, by Burgess and Key; Palmer's (Stockton); and one by Harker (on the principle of Smith, of Deanston). Most of them are reported to have done their duty smoothly and well, although some minor improvements were desiderated. The prospects of mechanical aid in agriculture appear to be very promising. We may here add that a new steam-plough and harrow, to be worked together, have been made by Mr. R. Rogers, of Westrow Foundry, Stockton. The construction is described as being simple, and with an engine of four-horse power, it can cultivate four acres of land a day, it is said, to any depth required. A patent has been secured for it by Mr. Fiskin, the inventor, and the Highland Society has awarded to it a sum of money, and sent a deputation to witness its operations, who have expressed themselves satisfied that its powers might be applied to agriculture with advantage.

Railway Matters.—A general meeting of the Grand Trunk of Canada Company was held on Tuesday week, at the London Tavern. The report of the directors stated that the progress and execution of all the works had been in the highest degree satisfactory, and that the sections of the line from Quebec to St. Thomas (40 miles), and from Montreal to Brockville (125 miles), will be delivered over to the company for traffic in the ensuing autumn. The communication between Brockville and Toronto (210 miles) will be completed next year; the section from Toronto to Stratford (82 miles), before the end of this year. A connection will thus be effected between Stratford and Montreal, and between Montreal, Portland, and Quebec (341 miles), except the Victoria-bridge. An arrangement with the contractors, Messrs. Peto, Brassey, Betts, and Jackson, had been come to, under which it was expected a more economical plan for the construction of Victoria-bridge might be effected. In reply to questions, it was stated that the Victoria-bridge had already cost 200,000*l*. and that 60,000*l*. more would be required before they could stop the works with a view to give time to consider whether a cheaper mode of construction could be adopted. Half-yearly reports would in future be given. The report was unanimously adopted.——On Tuesday week instructions were forwarded to Messrs. Peto, Brassey, and Betts, from the War Office, requesting them to take the necessary steps for hiring a steam vessel to convey to the Crimea 130 railway waggons, 40 drivers, ten shoeing smiths, and a supply of iron for shoes. The North of Europe Steam Navigation Company's steam ship *Leipzic*, of 700 tons burden and 250 horse-power, was engaged for the voyage, and on Saturday thereafter was at Blackwall, with all her berths ready and her coals on board. The work of loading commenced immediately, and by this date she sails.——Messrs. Wright and Son, of Saltley, have just completed a railway carriage for the Pasha of Egypt, intended for the line between Cairo and Alexandria, which is ultimately, it is said, to be carried across the desert. The interior is divided into three compartments—the centre for the Pasha and attendants, the second for his private use, splendidly fitted up, and the third for his servants.

The Edinburgh Fine-Arts Association.—The twenty-first annual meeting of the Royal Association for the Promotion of the Fine Arts in Scotland, called for the drawing of prizes and reception of the directors' report, took place on Saturday before last, in Queen-street Hall. The prize paintings were exhibited from a screen behind the platform. There was a numerous and fashionable attendance. The chair was occupied by Lord Neaves, who addressed the meeting. The report congratulated the subscribers on the prosperous aspect of their affairs. The annual fund of the Association for the year 1854-55 had exceeded that of last year by 100 guineas, and was larger than that of any year since 1840. The sum was 4,264*l*. From the late exhibition of the Royal Scottish Academy the committee had selected forty-four works of art, at a cost of 1,087*l*. The committee had given 400*l*. for the picture of the "Porteous Mob," by James Drummond; and for five pictures by George Harvey, D. O. Hill, Edmund Crawford, Samuel Bough, and R. T. Ross, a sum of 565*l*. Other details were entered into, and the committee further mentioned that, in March last, a memorial was addressed to them, on the part of the Government, applying for the temporary loan of one of their pictures in the National Gallery, for exhibition at Paris, namely, "The Quarrel of Oberon and Titania," by Noel Paton, a request which was at once acceded to by the committee.

The Metropolitan Buildings Bill has been read a third time, and passed the Commons.

The Chester City Surveyorship.—The local improvement committee, according to the *Chester Chronicle*, have resolved to recommend the council not to fill up the vacancy in the office of city surveyor—at all events, for the present. "It is suggested," adds our authority, "that the preferable plan would be to engage a person at the rate of 100*l*. a year to superintend the works that may be going on, and that there will be no difficulty in finding one competent at that salary. Almost all the important works that are contemplated are in that state of forwardness, as regards plans, specifications, and estimates, that the services of a regular surveyor are no longer required, and an individual of sufficient mechanical skill is all that is required. The situation is now more that of a clerk of the works than a surveyorship in the sense the latter office carries. It is hardly possible for 150*l*. *per annum* to secure the undivided services of a surveyor; and, if the present system were continued, it would be necessary that heavy security should be required. The best plan, it is urged, would be to obtain the assistance of a special engineer or surveyor when and as occasions arise for extra services of the kind, and to pay for them *pro re nata*."

Stained Glass Window for Branksea Castle.—A stained window for the banqueting-room of Branksea Castle, on Branksea Island, Poole harbour, the residence of Colonel Waugh, the owner of the island, is being completed by Messrs. E. Baillie and Co. of London, the exhibitors in the Crystal Palace, Hyde-park, of the glass painting, "Shakspeare Reading a Play to Queen Elizabeth." The colonel has built and endowed a church on this island, employing Messrs. Baillie to decorate the windows. The subject of the castle window is dictated partly by the consideration that Mrs. Waugh is lineally descended from Sir Walter Raleigh.

St. Bartholomew the Great, Smithfield.—A meeting has been held, to set on foot a subscription for the restoration of this church. It is one of the most ancient in London, and it is hoped that the authorities and ancient guilds of the city, as well as private individuals, will contribute handsomely towards the preservation of this interesting edifice, which is quite beyond the means of so poor a district to repair in the manner it deserves.

A Free Church and Schools for Pentonville. At a public meeting of the inhabitants of the new parish of St. James, Pentonville, recently held, resolutions were adopted to the effect, that there being but church accommodation for 600 out of a population of 12,000, an additional church is required which should be perfectly free; and that an additional school was needed for children of the poor, education free. A committee was appointed to carry out the object in view. It is proposed, in the first instance, to provide a temporary edifice constructed of iron, and capable of accommodating 1,000 persons, to be used for divine worship, and also for a school. The funds required are to be raised by voluntary contributions.

Architectural Notes.—In Committee of Supply on Tuesday last, the Commons voted, amongst many other items, 17,695*l.* for National Gallery expenses, including purchase of pictures; 25,000*l.* for Chelsea embankment and roadway; 4,578*l.* for the British Embassy Houses at Constantinople and Therapia, 1,550*l.* for the erection of Courts of Law, in the Isle of Man, and 9,000*l.* for the general repository for public records; 90,000*l.* for a site, and erection thereon of new offices for the Foreign Secretary (various objections to the plans have been started, we do not yet know with what reason or justice); 5,000*l.* towards completion of the Galleries of Art at Edinburgh; 40,000*l.* to defray the cost of public works, and for educational and other purposes, in South Africa; 5,000*l.* for the piece of ground required as we have often urged for opening up a continuation of Pall-Mall to the Green-park; and 11,000*l.* for the purchase of the remaining term of the Crown Lease of Buckingham House, Pall-Mall.

The Conservative Land Society.—The twenty-first purchase for distribution amongst the members has just been made at Clapton. The estate belonged to the late Mr. Samuel Berger, and consists of a family residence, with pleasure-grounds, gardens, &c. This property is in the parish of St. John, Hackney, and is close to the church, and the station of the North London Railway.

Sanitary Observance in Ancient Egypt.—A French chemist, M. Fontenelle, in a discourse on opening an Egyptian mummy, at the Sorbonne, Paris, expressed his belief that the Egyptians were led to embalm their dead from sanitary motives. During four months of every year the inundations of the Nile cover almost entirely the surface of Egypt which is under cultivation. Under the reign of Sesostris, for an extent of territory of about 2,250 square leagues, according to D'Anville, there would be a population of 6,222 persons per square league, which would present 350,000 deaths per annum. These corpses required to be got rid of either by burning or by interment: if the latter, they must have been buried around the inhabited spots, or in those inundated, and then the decomposition would have been a source of destruction: for burning there was an insufficiency of wood. But the soil of Egypt abounds in springs of natron (subcarbonate of soda), and as this substance is antiseptic, the inhabitants were naturally led to preserve with it the corpses of the dead. In support of the opinion that sanitary views were the cause of embalment down to the third century before the Christian era, when the practice was abandoned, M. Fontenelle observed that during the whole of that period the plague was unknown in Egypt, where it is now endemic.

Scaffolding.—While reading your paper yesterday, and *apropos* of nothing, it occurred to me that it would be much better every way if builders used permanent scaffolds, moveable on wheels, in fact a sort of car, instead of the present ugly and dangerous contrivances used in house building. I think if they did we should not have to hear of so many calamities as we do in connection with bricks and mortar.

Non-Professional.

Stone-cutting Machine.—The *Arbroath Guide* mentions a new stone-cutting machine, a recent invention of Messrs. James Hunter and Sons, of Leysmill, near that place, in full operation at the pavement quarries there, belonging to W. F. Lindsay Carnegie, esq. of Kinblethmont. "In the course of ten minutes," says our authority, "we saw a stone of 16 feet 8 inches, and another of 15 feet 2 inches, completely and mathematically divided by a revolving plate-iron wheel, to which are attached steel-cutters of a rounded, bell-mouthed form, apparently of no formidable description, and which can be taken off or put on with the greatest celerity. The speed of the machine is about 7 inches forward per minute for fair working stone of any breadth. The rapidity of the work is only equalled by the extraordinary noiselessness of the machine, as persons standing close by can let themselves be heard without any effort. Two men are only required to be in attendance, their principal work being the adjusting of the stone operated upon, the taking of it away—very easy processes—and the looking out for another. The stones which were subjected to the cutting process on this occasion were of the solid rock and unlaminated description and old sandstone formation. Thus, a description of stone which was previously not available for pavement purposes has been rendered so by the action of this novel and ingenious machine."

Precision in Speech and Writing requisite.—We have heard of a shipowner, not very accurate either as a speller or a writer, who required one of his skippers to bring him home from Africa "two" monkeys, and had afterwards reason to thank his own autographic "too," or rather "loo," as well as the zealous exertions of his "keptin," for the conversion of his ship into a splendid menagerie, containing a hundred gibbering *simiæ*. In this instance, "word of mouth" would have been preferable to written request. In another instance, which we have here more particularly to note, the written request would have been decidedly preferable to the verbal. At Plymouth there is a wall, adjoining the military prisons, and belonging to Government, which impedes the traffic on the Milbay-road. This wall it was very desirable to remove, and with concurrence of the corporation, the mayor, who happened to visit headquarters, asked Mr. Phinn, late recorder of Devonport, the Admiralty Secretary, if he thought there could be any objection to the wall in question being *razed*. Mr. Phinn replied that he saw no reason why it might not be *raised*, and accordingly procured the requisite authority to this end; and, while the corporation were congratulating themselves on the removal of the obstacle, and thanking the mayor for his successful effort to that effect, their astonishment may be conceived when they learned that a number of masons were busily engaged in raising the wall in accordance with the mayor's supposed request. The consequence is, that a written memorial has been forwarded to the Admiralty, praying that the wall may not be raised, but razed. In a case such as this, it is very desirable that the latter word should be *uniformly* pronounced in "*a* flat," leaving "*a* sharp" exclusively to the former, and so obviating all chance (a serious one at times it might be) of misunderstanding.

Boot and Shoe Cleaners.—Why should we not have boot and shoe cleaners on the plan of the knife cleaners? They should be worked with a treadle like a lathe, which should drive a cylindrical brush, one half of it a rough brush for removing dirt, and the other half a polishing brush. For hotels, schools, and other establishments, needing much boot and shoe cleaning, they would save time, labour, and cost.—N. R.

The "Holy Trinity," Upper Tooting.—The builder of this church was Mr. Samuel Nowell—not Mr. Jay, as first stated.

Coating Iron with Copper.—Mr. Johnson (for a correspondent) has patented an improved system of coating iron with copper, in carrying out which, the iron is thoroughly cleansed by the action of dilute sulphuric acid, and a lye of caustic soda. It must then be plunged into a first bath, by which means a thin coat of copper is deposited, and the iron is thereby protected against the action of the acid in a second bath, by which the deposition is completed, this latter bath consisting of sulphate of copper, rendered strongly acid by the addition of sulphuric acid. A thin coating of lead may be substituted for the first coating of copper.

Repair of St. Mary's, Islington.—We mentioned the endeavours that were being made to raise money to put the mother church into a proper state. The following tenders show the different views contractors take as to cost:—

Longmire and Burge	£1,666 0 0
Dove	963 0 0
Patrick and Sons	944 10 0
Timewell	891 10 0
T'Anson	847 0 0
Haynes and Eyre	804 0 0
Glenn	699 0 0
Taylor	694 18 0

Improvements in Propelling Vessels.—M. C. De Bergue, of Dowgate-hill, has recently secured a patent for a new propeller. It consists of a rectangular box, open at both ends, fixed laterally on the sides of the vessel, in the place of the ordinary paddle box, but completely under water. A disc of iron, or other metal fits closely into this box, and is connected to the crank on the main shaft of the engine by a connecting-rod. This disc acts as a plunger, and when in action the end toward the bows first reaches the bottom of the box: the hinder end then comes down rapidly, ejecting the water sternwards with great force, somewhat on the principle of the common bellows, propels the vessel forwards. Working under water, it is out of reach of gun-shot, and is therefore as safe in that respect as the screw.

Ottery Church.—I am much surprised never to have seen in print a proper account or engraving of the fine old church of Ottery, in Devonshire, which is justly deserving of the notice of architects, both from the grandeur of its appearance and peculiarity of plan (being apparently built on the fine model of Exeter Cathedral), and also from its exhibiting a specimen of a vaulted stone roof, unsupported by any kind of buttress above the height of the side aisles. But the point to which I particularly wish to call attention, is the extreme boldness of the operation to which this building must have been subjected at the time when the beautiful additional side aisle, covered by a vault of fan-tracery, was added. In order to connect the new aisle with the aisle of nave (it is equal in width to the nave), the whole of the wall originally supporting the vaulted roof of the nave on the north side, have been removed, and four rather slender pillars or piers substituted. The intricacy and effect produced by this succession of pillars and arches appears to me very beautiful, and certainly the architectural skill that could venture on carrying out so ticklish an interference with the main supports of a massy building, appears worthy of all admiration. A vast sum has lately been laid out on this church, and fine painted glass has been inserted in such profusion as to darken the interior to a most inconvenient degree.—A. B.

TENDERS

For two chapels, lodge and offices, and entrance gates to the Bridport Cemetery. Mr. H. Hall, architect:—

Patten (Bridport)	£1,300 10 0
Harris (Sherborne)	1,239 7 0
Gerrard (Bridport)	1,154 10 0

For building chambers, Nos. 11, 15, and 16, Clement's Inn. Quantities supplied by Mr. Elliott:—

Lawrence	£3,717 0 0
J. and C. W. Todd	3,500 0 0
Williams	3,366 0 0
Macey	3,343 0 0
Fish	3,295 0 0
White	3,270 0 0
Bennett and Co.	3,248 0 0
S. S. Wilson	3,228 0 0
Rudkin	2,956 0 0

For the enlargement and repair of house, at the corner of Hanover-square, London, and Hanover-street (formerly the Hanover Hotel), for Mr. John Leslie. Mr. Godwin, architect. Quantities not furnished:—

E. O. Symons	£2,234 0 0
John Phillips	2,800 0 0
Bywaters and Sons	2,694 0 0
Delay (accepted)	2,399 0 0

For new Congregational Chapel, Canonbury. Messrs. G. W. and E. Habershon, architects:—

Callow	£5,400 0 0
Piper and Son	4,280 0 0
Battenley	4,238 0 0
Butterbury	4,039 0 0
Cooper, H. W.	3,893 0 0
Myers	3,844 0 0
Higgs and Cullingford	3,787 0 0
Willson	3,782 0 0
Tolley	3,747 0 0
Dove	3,735 0 0
Higgs, Wm.	3,723 0 0
Rowland and Evans	3,448 0 0

For Welch Chapel, Nassau-street, Soho-square. R. H. Moore, architect. Quantities supplied by Mr. Charles Poland:—

Butterbury	£2,200 0 0
Rowland and Evans	2,228 0 0
Myers	2,200 0 0
Higgs and Cullingford	2,193 0 0
Macey	2,123 0 0
Dove, Brothers	2,095 0 0
Wilson	1,964 0 0
Bennett and Holdsworth	1,940 0 0
Richards	1,840 0 0
Searle	1,790 0 0
Hopkins and Roberts	1,696 0 0

For sewers, Queen's-road East, &c. Chelsea, for the Metropolitan Commissioners of Sewers. Engineer's estimate, 1,530*l.* 12*s.*:—

Batterbury	£1,744 0 0
Phillips	1,699 0 0
Yeoman	1,663 0 0
J. and E. Bird	1,630 0 0
Stamforth	1,520 0 0
Hall	1,458 0 0
Gooderson	1,410 0 0
Lee and Lavers	1,359 0 0
J. and C. W. Todd	1,297 0 0
Thirst	1,289 0 0
W. H. Rowe (accepted)	1,269 0 0

For Messrs Carlisle and Co.'s offices, Dunster court, Mincing-lane. Mr. John I. Cole, architect :—

J. and C. l'Anson	£4,100	0	0
James Browne and Co.	3,997	0	0
Ashby and Horner	3,995	0	0
Isaac Wilkinson	3,995	0	0
Haynes and Eye	3,953	0	0
Piper and Son	3,849	0	0

For laying out and enclosing ground, and erecting buildings, at Woolwich Cemetery :

	Chapels and Lodge.	Dwarf Wall and Fence.	Laying out and draining.	Oak Fences.

TENDERS FOR SEWAGE WORKS IN THE KING'S-ROAD, CHELSEA.—Mr Butterbury informs us that the amount of his tender was £1,65[illegible]. The sum stated was sent us by two correspondents. We must ask our friends to be careful with their lists of tenders.

SOUTH METROPOLITAN SCHOOLS, SUTTON.—Messrs Coleman's tender having been withdrawn, Messrs. Nicholson's was accepted.

TO CORRESPONDENTS.

"R. M." (it is scarcely possible to give such lists correctly) —"A. L."—"J. P."—"J. W."—"J. H. jun."—"Old Subscriber" (in measuring deck-nogged partitions, the timber in quarters, &c. is measured and cubed, and is also included in the superficial measurement for lathing, &c. ; if it is yes no particulars)—"W. W."—"H. A. L."—"The Tyler" (we are compelled to decline advising)—"R. M. P."—"J. W. B."—"J. W."—"T. N."—"R. K."—"T. L." (will appear)—"H. A. L."—"J. S. M."—"R. P. P."—"A Tourist"—"J. A. G."—"G. W."

"*Books and Addresses.*"—We are forced to decline pointing out books or trading addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO ARCHITECTS AND SURVEYORS.—A Gentleman of many years' practice, and fully competent to take the entire charge of an office, is desirous of entering into an ENGAGEMENT. Expectations not extravagant.—Address, A. V. L. Office of "The Builder."

TO MATHEMATICIANS, &c.

A GENTLEMAN wishes to obtain ASSISTANCE in STUDYING HYDRAULICS, &c. in the Practical Application of Formulæ, &c. Apply by letter, stating terms, &c. to X. W. Office of "The Builder."

AN Architect, with extensive practice in the Midland Counties, has a VACANCY for an IN-DOOR PUPIL.—Apply to W. S. SUTTON, Esq. Solicitor Birmingham.

CLERK of WORKS.—Wanted, immediately, a competent person in the above capacity.—Address, with terms and references, to Messrs. NELSON and INNES, 6, White hall.

AN Architect requires the assistance of a good and ready DRAUGHTSMAN, both perspective and geometrical. He must have been accustomed to Gothic and the later Eng sh styles, and must be prepared to show specimens.—Address, stating terms, to C. B. 29, Mornington-place, Hampstead-road.

TO PARENTS AND OTHERS.

AN Architect in good practice, residing in the Regent's-park, wants a PUPIL who possesses a taste for drawing. A premium will be required, which will be returned as weekly board wages. Reference exchanged. Apply, VERITAS, Office of "The Builder."

TO SURVEYORS' CLERKS.

WANTED, an ASSISTANT, fully competent to take out quantities, and manage the routine of an office. Address, by letter, stating age, terms, and where last engaged to A. B. 8, Bedford-street, Bedford-square.

WANTED, for a permanency, a steady, industrious MAN, as Working Foreman of Plasterers. Good references will be required.—Apply, stating wages, to E. LAWRANCE, Builder near the Railway Station, East Barnet.

WANTED, an intelligent and active MAN, who thoroughly understands the MARBLE TRADE in all its branches, to assist in the management of a business of the above description. Good reference and security required.—Address, Z. A. Office of "The Builder."

TO STONE AND MARBLE MASONS.

WANTED, immediately, THREE good MARBLE MASONS, and a few good HARD STONE-MASONS. Also TWO FIXERS.—Address, E. H. T. Post-office, Leicester.

WANTED, a CLERK of WORKS, to superintend some works in London.—Apply, by letter only, to HENRY CLEATON, Esq. Architect, 20, Castle-street, Holborn, stating the work he can most conveniently superintend, and the architects to whom reference is to be made, for character and ability.

WANTED, by a person thoroughly competent, with good practical experience, a SITUATION as Manager of saw-mills. Travller, or Clerk to a Timber Merchant. Can keep a set of books and has undergone an extensive saw mill in London. Town or country no object.—Address, S. D. Office of "The Builder."

WANTED, by a Builder, a WORKING SHOP FOREMAN. None need apply but those who thoroughly understand every branch of the business, and with character and ability will bear the strictest investigation. Direct to A. stating age, wages required, where last employed, &c. care of Messrs. Clark and Hunt, Ironmongers, Shoreditch.

TO PLUMBERS AND BUILDERS.

WANTED, a SITUATION, by an experienced Plumber. Will have no objection to turn his hand to any other part of the business. Good references.—Direct, G. L. No 19, Harrow-road, Paddington.

TO CARPENTERS AND BUILDERS.

WANTED, EMPLOYMENT for a Youth that has served two and a half years as carpenter and joiner. Apply to A. C. B. 14, Parliament-street North, Palace New-road, Lambeth.

TO ARCHITECTS AND SURVEYORS

WANTED, an ENGAGEMENT, by a Young Man who has been four years in the profession, and wishes for improvement. Salary moderate. Address, A. B. 78, Little Britain, City.

WANTED, by a Young Man, a SITUATION as CLERK of WORKS or GENERAL FOREMAN. Has a thorough practical knowledge of the whole of the building business in all its trade, joiner, and can produce good references from Architects and Surveyors he has employed, where he had the whole management of the business. Address, P. C. Office of "The Builder."

WANTED, by a Draughtsman, a SITUATION in a Civil Engineer's or Architect's Office. No objection to go abroad.—Address, J. W. B. High-street, Kensington.

WANTED, a SITUATION, as CLERK of the WORKS. Is thoroughly experienced in all the branches of building, and is a good plain draughtsman. Has unexceptionable testimonials from previous employments.—Address, A. B. 3, Blumburg-terrace, Vauxhall-road, Pimlico.

WANTED, by a Practical Man, an ENGAGEMENT as Clerk of Works or Builder's Foreman; has been engaged on extensive works and can produce good testimonials.—Address, D. C. 12, Blenheim-terrace, Abbey-road, St. John's-wood.

TO BUILDERS, CARPENTERS, AND OTHERS.

WANTED, by an experienced Young Man, a SITUATION as Foreman of Carpenters and Joiners, or a Permanent Situation, where one is required. No objection to the country.—Address, pre-paid, B. J. R. Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

WANTED, by an experienced Practical Man, a RE-ENGAGEMENT as CLERK of WORKS or GENERAL FOREMAN. Unexceptional references. Address, H. T. Office of "The Builder." No objection to the country.

TO ARCHITECTS AND OTHERS.

WANTED, by a Young Man, a Situation in an Office as above. Has been accustomed to measuring artificers' works, making out and working drawings, and can assist in taking out quantities. Has just terminated a fourteen months' engagement in an architect and surveyor's office. First-rate reference. Salary moderate.—Address R. S. 45, Connaught-terrace, Hyde-park.

TO BUILDERS AND OTHERS.

WANTED, by a first-rate hand, a constant SITUATION as HOT and COLD WATER PLUMBER, Oil and Size Grainer, Glass and Board Writer and Embosser. Apply, stating terms, to M. W. 10, Upper Chapman's-street, Commercial-road East.

TO ARCHITECTS AND ENGINEERS.

WANTED, by a Gentleman who has just completed an engagement as architect on a railway in Germany, and who has had some practice in dock work, a SITUATION in an architect's or engineer's office in England or Ireland. The best of references can be given.—Address, W. N. S. Post-office, Bristol.

TO BUILDERS, &c.

WANTED, by a persevering Young Man, aged 23, a SITUATION where he will be employed sometimes, out-doors, at measuring, superintending work, or otherwise engaged. He can make finished and working drawings and specifications, take out quantities, measure work keep out-letters' books, and work at the bench. He has a knowledge of perspective, writes a good hand, and well understands the routine of a builder's office. He was in a late situation six years. Wages, 30s.—Address, PERSEVERANCE, 36 Bemerton-street, Caledonian-road.

TO LANDLORDS, HOUSE AGENTS, AND LARGE FIRMS.

WANTED, by a steady Mechanic, who thoroughly understands the general REPAIRING of HOUSES, such as painting, glazing, plumbing, paperhanging roof, dry-work, &c. No objection to the country. The best of reference can be given. Address, A. Z. Office of "The Builder."

WANTED, a RE-ENGAGEMENT as CLERK of WORKS, by an experienced person, who can give satisfactory references as to character and ability.—Address, J. B. Post office, Liverpool.

TO ARCHITECTS AND OTHERS.

WANTED, by a Gentleman, aged 26, an ENGAGEMENT with an architect or others, as DRAUGHTSMAN and general ASSISTANT. The advertiser is rapid and skilful, acquainted with the details and practical construction, a good colourist, and familiar with office practice; speaks French and Italian, knows the continent well, and would prefer an engagement abroad. Salary not so much an object as an engagement in an office transacting a large business.—Address, X. Y. Z. 8, Melbourne-square, Brixton, London.

TO HOUSE CARPENTERS.

WANTED, to APPRENTICE a respectable YOUTH, aged 15, who has some knowledge of the business. No premium will be given.—Apply, A. B. 9, Henry street, Cumberland-market, Regent's-park.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser is desirous for an ENGAGEMENT in either of the above Offices. He is a good draughtsman, can take out quantities measure and superintend works, and perform the duties usually required. The highest references can be given.—Apply, by letter, to K. J. Mr. Clarke's, 14, Upper Seymour-street, Euston-square.

THE Advertiser is desirous of an ENGAGEMENT as GENERAL FOREMAN, OFFICE CLERK, or CLERK of WORKS, or to take the management of the Works, &c. on a gentleman's estate. He is a business man of many years' practical experience and efficient in every department of the building trades. Good references, and satisfactory, in details, for a permanency.—Address, E. S. A. Office of "The Builder."

TO ARCHITECTS, &c.

THE Advertiser, who has had fifteen years' experience in his profession, is open to an ENGAGEMENT. A good draughtsman and labourer. Agent. Excellent references. Salary moderate.—Address, Q. E. D. care of Mr. Scully, No. 2 A, Church street, Pimlico.

TO SURVEYORS AND CIVIL ENGINEERS

THE Advertiser wishes an ENGAGEMENT, in an office of the above. He is a good draughtsman and colourist, can go for drawings neatly and accurately, and write a good hand. Understands land surveying and leveling. Satisfactory references can be given. Address, A. B. care of Mrs. Winter, Greenhill, Harrow.

TO ARCHITECTS AND SURVEYORS

THE Advertiser is desirous of a SITUATION in either of the above Offices. He is capable of preparing fair working, detail, and other drawings, measuring up works, &c. No objection to the country.—Address, A. B. C. 25, Johnson's-place, Harrow-road.

WANTED, a permanent SITUATION in Town or Country, by a young man aged 27, as PLUMBER. Can fill his time up in Painting and Glazing.—Address, J. M. 11, New-street, Covent-garden.

TO CARPENTERS AND BUILDERS

A YOUNG MAN, 25 years of age, wishes for a SITUATION as FOREMAN in a small shop, or as CLERK to a BUILDER, or both; can write a good hand, and is well acquainted with measuring work; can take out quantities and estimate, and make out working drawings. Address, stating terms &c. A. A. No. 15, Earl-street, Long-acre, Southwark.

TO CARPENTERS AND BUILDERS

A YOUNG MAN, aged 21, who has been five years in the business, wishes to ARTICLE HIMSELF for further improvement for two years. Any fee can be given for his work will be liberally paid.—Address, S. S. 6, George-street, Lambeth-walk.

AN ARCHITECT'S ASSISTANT, having fifteen years' experience in the office and out work, and assisting in competitions, sent in first, can have the highest testimonials, is now desirous of a PERMANENT ENGAGEMENT.—Address, A. Architect, 101, Stanhope-street, Regent's-park.

A SURVEYOR or Engineer, in full practice, would do well to confer with the Advertiser, being a first-rate expeditious plan and general draughtsman, ornamental writer, expert with pentagraph, &c. (the last used to take reduced measurement of written work) practice. Is now open to an ENGAGEMENT.—Apply by letter to F. R. 4 Trafalgar-square, Charing-cross.

A THOROUGH practical and experienced SHOP FOREMAN of JOINERS will be OPEN to an ENGAGEMENT in three weeks from this time. References to the works where now engaged. Address, W. L. Crown and Sceptre, Brixton-hill.

TO ARCHITECTS

A YOUNG MAN, who has been some time in the profession, and is a good Draughtsman, is desirous of an ENGAGEMENT. Address, "DELTA," Messrs. Wilkinson's, 39 Coleman-street, City.

TO PLUMBERS, BUILDERS, &c.

A YOUNG MAN, having terminated an engagement as Plumber for fourteen years, is desirous of a SITUATION. Has no objection to fill up his time at glazing. Satisfactory reference as to ability, &c.—Address, P. C. 18, Mostyn-house lane, Peckham.

A THOROUGH Practical ARCHITECT and ENGINEERING SURVEYOR, capable of taking the entire management in constructing works of any magnitude, is desirous of an ENGAGEMENT. No objection to go abroad. Testimonials of the highest class. Address, H. W. 10, New North-street, Queen square, London.

TO GENTLEMEN, BUILDERS, PAINTERS, AND OTHERS.

AN experienced Man, a Carpenter, who has filled the situation of carpenter, plumber, painter, glazier, paper-hanger, and colourer, in repairs of houses, has had good experience in shop fronts, stairs, sashes, and frames, boxing shutters, &c. can make out working drawings, and measure up work, wants a SITUATION, at a moderate salary.—Address, —SMITH, 23, Cancel-street, Elizabeth-street, Walworth.

A LIBERAL PREMIUM will be paid as an APPRENTICE FEE with a respectable Youth to an Architect, Civil Engineer, Locomotive or Marine Engineer, Agricultural Implement Maker, or first-class Builder. In the north of England or Scotland preferred.—Direct particulars and terms to H. Mr. Rearden's, 81, Pecon-hill.

AN Architect and General Surveyor of long standing, is desirous of meeting with a gentleman of respectability and some experience in the business who would be willing to co-operate with him in the cultivation of an extensive connection in the general business of Surveying and Estate Agency.—Address, T. L. care of Mr. Tyerman, Waterloo Chambers, 149, Strand.

TO BUILDERS AND CONTRACTORS.

A YOUNG MAN, of good education, who has completed his articles at the bench, and has a general knowledge of the building business and accounts, wishes for a SITUATION in the Office of a large firm in town.—Address, F. G. Office of "The Builder."

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country. An extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

LOANS at 5 per Cent. on personal security, in connection with Life Assurance. 200*l.* to 300*l.* preferred. No delays.—English and Foreign Office, 135, Oxford-street. LEWIS C. HERTSLET, Secretary.

A STEADY, Business Man, having from 500*l.* to 1,000*l.* may realise an equal amount yearly, by the MANUFACTURE and SALE of a PATENTED ARTICLE of unquestioned merit, highly patronized by the Government, from whom large orders can be had, and in increasing demand.—Applications from principals, or their Solicitors only, pre-paid, addressed to Mr. TAUNTON, 79, Upper Stamford-street, Lambeth, will meet with immediate attention.

Full Security to Parties Assured by means of a Capital of ONE MILLION STERLING, for the last Fifty Years all Paid up and Invested.
Premiums particularly favourable to the younger and middle periods of Life.
Two-thirds of Profits as Bonus.
Life Tables according to various plans, to suit the special circumstances of Insurers.
No charge for Stamps on Life Policies.
Fire Insurance Proposals entertained to any amount.
Liberality and promptitude in the settlement of claims.
Prospectuses with full Tables and Explanations and Forms—may be had at the Company's Offices, or of the Agents.
WILLIAM NEWMARCH, Secretary.
N.B. Life Insurance Premiums are allowed as deductions in Income Tax Returns.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.
WILLIAM R. ROBINSON, Esq. Chairman.
HENRY DAVIDSON, Esq. Deputy-Chairman.
The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.
FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.
ONE-THIRD of the premium on insurances of food and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of £50 and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value
SECURITY.—Those who effect insurances with this Company are protected by its out-scribed capital of £2,000,000, of which £800,000 is invested, from the risk incurred by members of Mutual Societies.
The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

At the close of the last financial year, the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same source, to...	160,000

Insurances, without participation in profits, may be effected at reduced rates.
SAMUEL INGALL, Actuary.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
Incorporated by Special Act of Parliament.
THE TWENTY-FOURTH ANNUAL GENERAL MEETING of this Society was held at Edinburgh, on Tuesday, May 1, 1855. The Report, by the Directors, among other information, contained the following particulars:—
During the year closed on 1st March last—
628 Policies have been issued;
The Sums Assured thereby amount to £84,676*l.*;
And the Annual Premiums thereon to £2,947*l.*
The position of the Society at 1st March was as follows:—

Existing Assurances	£4,892,733
Annual Revenue	167,394
Accumulated Fund	900,846

This Corporation has been in existence Twenty-four years. It proceeds on the principle of mutual contribution, the surplus or profit being wholly divisible among the Members.
The total additions to Policies made at and preceding March 1, 1853, amounted to SIX HUNDRED AND SIX THOUSAND EIGHT HUNDRED AND FIFTY-FIVE POUNDS.
The amount paid to the representatives of deceased Members is upwards of SIX HUNDRED THOUSAND POUNDS.
Copies of the report, and all other information, may be had on application at the Head Office, or Agencies.
Agent in London W. COOK, 126, Bishopsgate-street Within.
VIEW OF THE PROGRESS AND POSITION OF THE SOCIETY.

	Amount Assured	Annual Revenue	Accumulated Fund

Super-extra stout quality.

2½	3	3½	4 inches.
2s.	2s.3d.	2s.6d.	2s.9d. 3s. per yard.

No. 0. A cheaper hose, to bear a low pressure for gardens and agricultural purposes, at greatly reduced prices.

¾	⅞	1	1¼	2	2½	2¼ inches.
9d.	10d.	11d.	1s.	1s.3d.	1s.6d	per yard

The hose is Burnett's ed at an extra charge of 3d per yard. Union Joints, Branch Pipes, and Jets, are also supplied.

DURABILITY of GUTTA PERCHA TUBING.—Many inquiries having been made as to the Durability of Gutta Percha Tubing, the Gutta Percha Company have pleasure in giving publicity to the following letter:—FROM SIR RAYMOND JARVIS, Bart., VENTNOR, ISLE of WIGHT.—Second Testimonial.—"March 20th, 1853.—In reply to your letter, received this morning, respecting the Gutta Percha Tubing for Pump Service, I can state, with much satisfaction, it answers perfectly. Many Builders, and other persons, have lately examined it, and there is not the least apparent difference since the first laying down, now several years, and I am informed that it is to be adopted generally in the houses that are being erected here."
N.B. From this Testimonial it will be seen that the CORROSIVE WATER of the ISLE of WIGHT has no effect on Gutta Percha Tubing.
THE GUTTA PERCHA COMPANY, PATENTEES, 18, WHARF-ROAD, CITY-ROAD, LONDON.

TIMBER and DEAL YARD.—A large CONSIGNMENT of PREPARED FLOORS (dry), DEALS, BATTENS, &c. for SALE on COMMISSION, at very low prices for cash. Timber Deals, &c. received for Sale on Commission.—THOMPSON and HOLMES, Wood and Stone Brokers, the Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MACHINE CARVING, JOINERY, and MOULDING WORKS, Belvidere-road, Lambeth.—The Proprietor of the above works begs respectfully to apprise the nobility, clergy, architects, builders, cabinet-makers, and trades generally requiring Carved and Moulded Works, that he is now enabled to execute any orders that may be entrusted to him with the utmost promptitude. Every description of Carved Work and Tracery, roughed out by the machines for the trade only. Pulpits, Lecterns, Reading-Desks, Screens, Altar-Rails, Tables, Chairs, &c. executed at the shortest notice. Specimens of Carved Work, suitable for various purposes, can be seen at the Works, and Estimates furnished upon application.

SCAFFOLDING for SALE, consisting of 120 poles, about 3600 feet; about 180 boards, 150 putlogs, 25 dozen cords, &c. &c. Poles, 3d. per foot; Boards, 1s. 6d. each; putlogs, 6s. per dozen; cords, 3s. per dozen.—To be seen on application to Mr. SOMERVILLE, Zinc Worker, 2, High-street, Notting-hill

TRELOAR'S COCOA-NUT FIBRE MANUFACTURES, consisting of Matting, Mats, Mattresses, Brushes, Netting, &c. are distinguished for superiority and excellency of workmanship, combined with moderate prices. Prize medal both in England and America, at the Exhibition of all Nations.—T. TRELOAR, Cocoa-nut Fibre Manufacturer, 42, Ludgate-hill, London.

HUBBUCK'S PATENT WHITE ZINC PAINT,

The Permanent White of the Ancient Artist.

HUBBUCK and SON, the Original Manufacturers, are enabled, by a process which is patented, to supply their Pure White Zinc Paint at the price of White Lead. Neither exposure to heat, nor tropical climates act upon it. It is entirely free from any poisonous or pernicious property. Those dreadful maladies, paralysis and painters' colic, will be entirely avoided. The Powdered White Zinc may be had for grinding in Oil; also for Plaster of Parisand Scorations, and where it is used with Size, Varnish, &c. Sold by the Wholesale Paint-dealers in Original Packages, each cask stamped HUBBUCK—LONDON—PATENT. And if not so marked, the quality is not guaranteed. Full particulars may be had of THOMAS HUBBUCK and SON, the Original Wholesale Manufacturers, Paint and Varnish Works, opposite the London Docks, London.

N.B. OLD ZINC AND ZINC CUTTINGS BOUGHT TO ANY EXTENT.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their friends and the public that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. beg to request the attention of Contractors, Merchants, and others, to the quality of their Roman, Portland, and Bath Cements, which they are manufacturing at their works, situate on the Bristol and Exeter Railway, two miles north of Bridgewater, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market, they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and continuous power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

Dated St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not recrate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the Makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER, for internal uses. These well-known hard Stucco dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

PORTLAND CEMENT WORKS, NORTHFLEET, Kent. KNIGHT, BEVAN, and STURGE, Manufacturers only of first class quality, for the home and foreign trade. Portland cement is manufactured at these works with especial reference to its fitness, whether for stucco, brickwork, blocks for breakwaters, tidal work, or otherwise.—London Wharf, Belvedere-road, Lambeth.

ATKINSON'S CEMENT, so long known and esteemed in London for plastering purposes, is a quick-setting Cement, that requires no coil ring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, and Seel-street, Liverpool

PARIAN CEMENT, for Internal Use, to be painted in a few hours, and papered within a couple of days. FRANCIS, BROTHERS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and Dealers in Plaster, Paris White, Mastic, Hair, Lime Limes, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Rilsing, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENTS, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent.—N.B. These Cements supplied for shipment, on advantageous terms.

BATH CEMENT.—This Cement is equal to Portland in strength and durability, does not vegetate in damp situations, is perfectly hydraulic, of a regular and warm colour, resembling the Bath stone.—CHARLES RICHARDSON, 6 South Wharf, Paddington.

21, George-yard, Lombard-street, City.

ELMLEY CEMENT WORKS, ISLE of SHEPPEY, Kent. ROMAN and PORTLAND CEMENT of the first quality manufactured at the above works. Also STOCK and KILN-BURNT BRICKS, hand moulded and machine made, for shipment or otherwise.—Apply to G. BOOTH, Agent, as above

SOUTHAM BLUE LIAS LIME and PORTLAND CEMENT WORKS, OLDHAM and TATHAM are now prepared to receive orders from contractors, builders, and merchants for Ground and Lump Blue Lias Lime, also for Portland Cement and Lias and Bath Cement, both of which will be found of very superior quality, and which are approved by the Authorities of two or more parts of south to one of cement 10 and 7, to Londs can be run alongside our wharf or works, and all orders addressed to Warwick will receive prompt attention.—Office, Warwick.

GREY STONE LIME WHARFS, 13, UPPER GROUND-STREET, Blackfriars (Surrey side), 7, NORTH WHARF-ROAD, Paddington.

WILLIAM PETERS begs to inform the trade he is in a position to supply the best GREY STONE LIME in any quantities from the above wharfs, or per barge direct from the kilns.

Wouldham-hall Grey Stone lime Works, on the Medway, near Rochester, March 31, 1855.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Maudeville-street North, City-road House. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REWARDS OF THE JURIES," page 781, of the Great Exhibition, must the Manufactories known as long as "The Tilleries," Tunstall, Staffordshire, as the first of the kind in the world.

G. BURGE, JUN. ROMAN and PORTLAND CEMENT MANUFACTURER, Crown Wharf, Great Scotland yard, Westminster

DAVIES and NORMAN, Agents.

Cements, Plaster, Lime, Bricks and Tiles, Sand, Fire Goods, &c. &c. of superior quality, and at reasonable prices.

GLAZED STONEWARE DRAIN-PIPES, CLOSET-PANS, &c.

IN EVERY VARIETY.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or as sand than any other description of cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any ores. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is the best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS CEMENTS of the best quality

SECONDS, PAVIORS', STOCKS, and other BRICKS.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

NOTICE.

GREAVES'S BLUE LIAS LIME and CEMENT, 6, South Wharf, Paddington-basin, London, March 29, 1855.—CHARLES RICHARDSON hereby informs his friends he has taken another WHARF, adjoining, as expressly to keep a LARGER STOCK of the above valuable HYDRAULIC LIME always on hand, that in future all orders may be punctually attended to. Orders for export, or alongside rivers, canals, or railway stations, should be given a few days before required.

BLUE LIAS LIME.—J. EASTWOOD and SONS take this opportunity of informing their customers that they have on WHARF LIAS LIME, always in stock, ready for delivery, at Belvedere road Lambeth

JOHNS and CO.'S PATENT PERMANENT STUCCO WASH perfectly NON-ABSORBENT (no quantity of rain having any effect upon it), and is not VEGETATE or RUST. Stucco Cement and Stucco Paint. CLARK and BENGOUGH, Manufacturers, Office, 4, Georges-yard, Lombard-street. Works, Grand Surrey Canal Bridge, Old Kent-road.

PANTILES, PAVINGS, &c.—J. H. ANDREWS, Wisbench, Cambridgeshire, Begs to offer pantiles at 30s. per 1,000; floor bricks and inch pavings, at 30s. per 1,000; 9-inch pavings, at 60s. per 1,000; 9-inch pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties Railway.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being entirely untouched by acids, and from the former ill effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any of the attention has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect process of manufacture, or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark on Pig by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO. and by their Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street, City; FREDERICK BRABY, Wholesale and Retail Agent, 8, Tottenham-court, New-road. In Manchester and Liverpool by R. CLAY, 5, Mersey-street, who is the acknowledged Painter to the Company for Zinc Paints, and undertakes painting slate, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush; and in Southampton, by Mr. H. J. BUCHAN. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged Painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agency in London, 13, Manchester-buildings, Westminster.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT.—L. R. PEARSE and CO. Brick and Tile Makers and General Merchants. Builders, contractors, and others supplied with every description of building material at the lowest market prices.

TO BUILDERS and OTHERS.—BRICKS delivered at any part of the River up to Battersea-bridge, at the following prices, viz.:—Grey Stocks, 35s. per thousand; Grizzles, 28s. per thousand; Rough Stocks, 25s. Place, 18s.—Terms, cash on delivery.—Apply to Mr. G. SMEED, Sittingbourne, Kent.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviers, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to honour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-seconds, Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; as very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Hackney Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. The Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

WHITE SUFFOLK and RED FACING BRICKS.

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters, Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE, 5, ADELAIDE-PLACE, London bridge.

Depôt, Agar Wharf, King's road, St. Pancras.

VITRIFIED STAFFORDSHIRE BLUE BRICKS, Paving, Roofing, and Ridge Tiles, Sanitary Pipes, &c. Sonthbridge Fire Goods, &c. of all descriptions, and of best quality. Wood and SON, Manufacturers, Portway, Oldbury, near Birmingham. Agent—Mr. J. UNWIN, Private Residence, 75, Nelson-square, Blackfriars-road.

BRICKS.—Builders wanting Bricks of good colour, are advised to call on H. PARKS, Lewisham, and see the quality at low prices. Carriage within six miles on the most reasonable terms. Red facing bricks at 30s. All kinds of tiles. Paving bricks of own making, salt glazed stone pipes manufactured; also all kinds of red pipes and pots. Application by letter punctually attended to.

FOR IMMEDIATE SALE.—FIRE BRICKS, LUMPS, TILE, and TERRA COTTA.—SAMUEL TICKETT has received a large consignment of the above goods for sale. Apply on the premises, Stone wharf, Isle of Dogs. Dealers and large consumers liberally dealt with

TO BUILDERS, CONTRACTORS, and OTHERS.—TO BE DISPOSED OF, at very low prices, a large quantity of very hard BUILDING BRICKS, TILES, and PAVING WARE; also, 3, 4, 6, 9, and 12 inch red Socket Drain Pipes, and 6 by 6 Tile Pipes. Apply to ST. JOHN HEWITT, Redhill Works, Southampton.

TO CAPITALISTS, SPECULATORS, BUILDERS, and BRICKMAKERS.—TO BE DISPOSED OF, a large BRICKYARD, situate near one of the principal towns in the midland counties, capable of producing more than 10,000 bricks, of good quality, weekly. As the neighbourhood increases with a degree of rapidity witnessed in scarcely any other part of the kingdom, the opportunity is a favourable one. Both machinery with steam power and hand labour employed.—Apply to Mr. W. WHITEHEAD, Auctioneer and Estate Agent, 2, Albert street, Nottingham.

O. MCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleetstreet, City. Sand, from above or below bridge delivered per yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Boilers and Pumps supplied with the ascension and other Filters at trade prices. These Filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, and self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, Whitehall Wharf, Cannon-row, Westminster.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 4, Queen-street, Cheapside, London, beg to call the attention of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian blinds, per yard, 4s.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, ditto, 3s. 6d.; outside blinds, in canvas cloths, 3s. Transparent blinds in great variety. Estimates with prices and discounts to builders and the trade, forwarded on application, post free.

TERRA-COTTA WORKS, Blackfriars-road, London.—The PRIZE MEDAL for MATERIAL and WORKMANSHIP in TERRA COTTA to N. H. BLANCHARD, late of Coade's Original Works, for the successful manufacture of this invaluable material, that has been so successfully adopted for nearly a century in this country, by our eminent architects and others, in the adornments of our noblest buildings. Groups, statues, Vases, Fountains, and Architectural Embellishments, at prices and qualities that will defy competition, will be found to be a different material to that now being imitated by pilfering manufacturers, with only three of the century's experience, and which greatest knowledge none of the work recently completed by N. H. B. can be referred to, three of the finest Embellishments to the external part of Oldham Church, are from the Duke of Sutherland's, a vase, Tottenham and Edmonton, the turrets to the Caledonian Chapel, Camden, containing from 3,000 to 4,000 feet cube; the colossal Britannias, 19 feet high, at the County Fire Offices, Cornhill and Regent-street; the Arabs, and Colonnade group, at the Kent Mutual Insurance Office, Strand; and other works elsewhere, too numerous to mention. A large Stock of newly designed Chimney Shafts and Pots, to suit the various styles of buildings, at very low prices, and worthy of notice.

CROGGON AND COMPANY. PATENT ASPHALTE ROOFING. BOILER, RAILWAY, AND OTHER BITUMINOUS FELT. For Damp Walls, and Lining from Hollands. 2, DOWGATE-HILL, LOND. N.

ASPHALTE PAVEMENT, 2s. 3d. per square yard, 3/4 inches thick, for footpaths, railway platforms, school yards, garden paths, &c. Carriage roads 5s. 6d. per square yard. Railway Arches made waterproof at 2s. per square yard. Every description of pavement laid down, and the work guaranteed.—Apply to Messrs. WRIGHT and BROWN, 39, Bucklersbury, City.

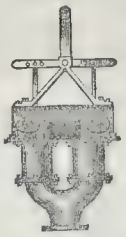
ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; establishes 1844. Every description of Flooring executed with the asphaltic material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

FREE RAILWAY TICKETS.—ENFIELD ESTATE.—IMPORTANT to BUILDERS. The head of every house taking upon the Weddington Estate, at the rate of 70*l.* per annum, will be entitled to a Free First-class Railway Ticket; and of every house of the rate of 50*l.* per annum, will be entitled to a Free Second-class Railway Ticket, for four succeeding years.—Apply to Mr. GEORGE MORGAN, 7, Chancery-lane.

ROYAL POLYTECHNIC INSTITUTION. Exhibition of the Thames Water, by the oxy-hydrogen Microscope, daily, at 4 and 9 o'clock.—The Effect of Russian Infernal Machines, at 3 45 and 8 45.—Lecture on the Relics of the Franklin Expedition, at the Afternoon Meeting.—Dissolving Views, at 1 and 7 30.—Lecture by J. H. Pepper, Esq. on the Tempest, and of Vocal and Instrumental Music. Brunel's Submarine Conduct illustrated by the Diving Bell on Monday and Wednesday and Friday at 3 and 8. Dissolving Views of the Late Battles, daily at 4 and Monday at 1. Wednesday Evening, at 8 30.—Diorama of Sam Slick, daily, at 3, and Tuesday, Thursday, and Friday Evenings at 7 45.—Monday Afternoon, the 6th inst. Lecture by Lewis Thompson, Esq. on Coal and Coal Gas.



FOWLER'S

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

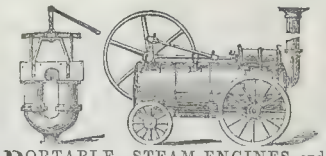
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinkers, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto ... 48s. per doz. galvanized.



Upper Ground-street, Blackfriars Bridge, Surrey Side.

TO WATER AND DOCK COMPANIES, CONTRACTORS, &c.

PARSEY'S PATENT REVOLVING PUMP will throw as much water with one-third the labour as any other pump. One of these pumps at work at No. 7, Strand.

TO LOCAL BOARDS of HEALTH and GAS and WATER COMPANIES.—FREEMAN ROE'S PATENT SLUICE-VALVES, acknowledged to be the best in use; hydrants or fire-plugs; wells sunk and bored; the hydraulic ram; fountains; pumps of every description. Estimates prepared for all works connected with the above or gas. Pumps set on hire.

W. F. ROE, late FREEMAN ROE, Hydraulic and Gas Engineer, 70, Strand, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars Bridge (Surrey Side)

TO CONTRACTORS.

PORTABLE STEAM-ENGINES TO BE LET, on HIRE, by the WEEK, MONTH, or for any period, of 8-horse, 10-horse, 12-horse, 16-horse, 20-horse, and 25-horse power, adapted for Contract work generally. These engines have been successfully employed for years by all the principal contractors, and are ready for delivery at a day's notice. Several may be seen at work. Apply to Messrs. MEDWIN, HALL, and Co. Engineers, 26, Blackfriars-road, Sole Patentees and only Manufacturers. N.B. Any of these Engines may be purchased.

TO ENGINEERS and CONTRACTORS.—TO BE DISPOSED OF, a pair of 9-inch PUMPS, with two sprawls, connecting-rods, gunmetal work requisite to work the same; also, a 8-horse STEAM BOILER, with fire-in centre flue, the whole nearly new.—Apply at the Gas Works, Stafford.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hitherto been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

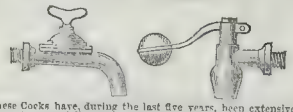
TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leaking, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for obtaining direct to main pipes without a cistern, cocks, or wire.

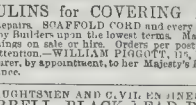
LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

PRIZE MEDAL, CLASS 2.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last few years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.



The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD BROTHERS, sole Manufacturers, 156, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 178, Fore street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

BY HER MAJESTY'S ROYAL LETTERS PATENT, APRIL 27, 1855.

JAS. LEWIS'S PATENT STENCH-TRAP

FOR STREET USE.

Price, with Gutter Plate, 18 inches by 9 inches, cast, 24s.; weight about 2 cwt. Larger sizes made, if required.

FOR AREAS, &c.

Price, with Back Plate complete, 10 inches, cast 6s.

FOR COURTS, YARDS, &c.

10 inches by 8 inches, each 10s.

The above articles are protected from Pilferage by the British Government, on account of their peculiar construction.

For the many advantages they possess, being a perfect trap for preventing smell proceeding from the Drain, should the water evaporate in the pan. When our traps are put down no further attention is ever paid to them afterwards—this renders them useless. The above, therefore, are a desideratum, as they require no attention. It is well known when closets, especially in the country, it sometimes and hence a [illegible] that is situated by [illegible]

Any obstruction [illegible] can be remedied by the Sanitary Act to lay complaint before the public or private authorities [illegible] they are required. All persons [illegible] would be kind enough to write to the patentee [illegible] testimonials. Please order from [illegible] nuisance, or surveyor, or the Patentee, JAMES LEWIS, Ironfounder, Aylesbury. Specimens to be seen in the Courts of Invention, Crystal Palace, Sydenham

SALES BY AUCTION.

MARBLE.—TO BUILDERS, SCULPTORS, MARBLE MASONS, &c.

MESSRS. THOMPSON and HOLMES beg to inform the Trade that their PUBLIC AUCTIONS of MARBLE will take place on the following days:—
MONDAY, 6th AUG. " | MONDAY, 3rd SEPT. "
MONDAY, 3rd SEPT. " | MONDAY, 5th NOV. "
Catalogues and further particulars to be had on application one week previous to each sale.—The MARBLE WHARF, Thames Bank, Pimlico, at the foot of VAUXHALL-BRIDGE.

HAMPSTEAD.—Building Materials; about a Ton of Lead, Four Miles of Copper Wire, 2 cwt. of Gutta Percha, &c.

MR. C. FURBER has received instructions from Messrs. Friend and Hamill to SELL by AUCTION, on the premises, at BELSIZE-PARK, between Hampstead and the New Finchley road, on WEDNESDAY, AUGUST 8th, at ELEVEN for TWELVE o'clock, the excellent sound BUILDING MATERIALS, comprising the entire portion of Heavy Turnpike, Iron, the nail in pack-gates, a good assortment of doors, sashes, rafters, tiles, stable fittings, miscellaneous assortment of brass-work, iron palisading, lead pipes, zinc pipes, copper cocks, and roller blinds, van and other harness, and numerous effects to clear the estate. Catalogues may be had four days prior to the sale, on the premises; of the Auctioneer, 3, Copthall-court; and of Messrs. Friend and Hamill, Contractors, 44, Bedford-row; and at the Auction Offices, in Warwick-court, Gray's-inn.

NEW HOUGHTON, within eight miles of the Fakenham Railway Station, and twelve of the Port of King's Lynn.

MR. J. BECK has the honour to announce he has received instructions to SELL by AUCTION, on WEDNESDAY, AUGUST 8th, in Sixteen Lots, the OAK TIMBER TREES, many of them of large dimensions, and all of first-rate quality, the property of the Most Noble the Marquis Cholmondeley, all lying by the side of gravel roads for convenience of removal. Three months' credit will be given to purchasers to the amount of £5 and upwards, upon approved security—those not so may be obtained of Mr. W. STANTON, Resident Agent; of the Auctioneer, Snettisham, near Lynn; and posted free on application.—Sale to commence at TWELVE o'clock.

IN SURREY.—The Westbrook Place Estate, close to the town of Godalming, the intended Station of the Portsmouth Railway being on the Estate. A Manorial Property, with capital Residence, Farm Buildings, and Eighty Acres of ornamental Building Land. Also, Extensive Mill Premises, with valuable water power, and about Eight Acres of Land, and some smaller pieces of Land, about Four Acres.

MR. ROBINS is favoured with instructions to submit to PUBLIC COMPETITION, at the AUCTION MART, on THURSDAY, AUGUST 23rd, at TWELVE for ONE, in three lots, a singularly important Freehold Manorial Property, of which early possession may be had, long known as the WESTBROOK PLACE ESTATE, on the west side of the town of Godalming, famed for the irreclaimably pure quality of its spa fish, which possesses, perhaps, the only site in all England offering the same irresistible temptation for carrying out a building operation for villas, with land; the advantage of immediate proximity to the Station, and up to it erected on the property, Railway Passing the Property and will be opened for public use about the end of excellent quality to almost any extent can be obtained from the quarry. The estate comprises a capital mansion or residence for a family, seated on a terrace walk, with sufficient accommodation for matured gentlemen's establishment, both roughly repaired, partly fitted, and decorated, at an immense outlay, the numerous garden, forcing, and other requisite domestic arrangements, private offices, six stall stable, and double carriage house. The pleasure grounds and walks, commanding from various points the most lovely and extensive views, are of unusual extent, ornamented by luxuriant shrubs, stately timber, and hanging woods, giving a park-like character to the eighty acres of rich and productive land which surround, and, with the newly-erected and well-arranged farm buildings and Rabbit's abode, would suggest the formation of a beautiful model farm. The approach from the south will be by a short road by which also the present road from the church; a level crossing of the line and a bridge is being prepared for the same. Also, on the opposite side from Westbrook, a valuable Property recently acquired by Mr. Mayo for a chalk-pit, and, very extensive materials all arranged for the purpose, with ample water power; also a second water power, formerly appertaining to a paper mill, which may again be brought into use. This lot comprises altogether about eighteen acres of luxuriant land, a portion being lammas land, with a noble sheet of water, which receives the flushing water from the mill, and might be made a capital piece for fish. There is also upon existing pieces of freehold land, about four acres, from which a valuable supply of sand could be obtained. James Mason, at the Bailiff at Westbrook Place, and particulars and plans of lots may be had at the Inn, Godalming; the Red Lion Arms, Godalming; of Messrs. Brown, Surveyors, Mr. Mayo, Rye, Sussex; of Messrs. Hedding and Sons, Canterbury, Westminster; of W. G. Roy, Esq., Solicitor, 28, Great Ormond-street, Westminster-square; and at the Mart, and at Mr. ROBINS' Offices, Lincoln-Corent-garden.

TO SCULPTORS, MARBLE MASONS, BUILDERS, AND OTHERS.

MESSRS. EVERSFIELD and HORNE have received instructions from the Executors of the late Mr. Matthew Wyatt, to SELL by AUCTION, at the MARBLE WHARF, 17, Millbank-street, Westminster, on Wednesday, August 8th, 1855, and following day, at 12 o'clock precisely, the Valuable Stock in Trade of the late Mr. Wyatt, comprising about 200 slabs of Statuary and Veined Marble, of various sizes, from 1 to 3 inches thick; 50 Blocks of Statuary and Veined Marble, from 6 to 12 inches thick; 100 Slabs of Portland Stone, from 1 to 3 inches thick; 50 Blocks of Portland Stone, from 6 to 12 inches thick; 50 Slabs of Bath Stone, from 1 to 3 inches thick; 50 Blocks of Bath Stone, from 6 to 12 inches thick; 50 Slabs of Caen Stone, from 1 to 3 inches thick; 50 Blocks of Caen Stone, from 6 to 12 inches thick; 50 Slabs of Ancaster Stone, from 1 to 3 inches thick; 50 Blocks of Ancaster Stone, from 6 to 12 inches thick; 50 Slabs of Derbyshire Stone, from 1 to 3 inches thick; 50 Blocks of Derbyshire Stone, from 6 to 12 inches thick; 50 Slabs of Yorkshire Stone, from 1 to 3 inches thick; 50 Blocks of Yorkshire Stone, from 6 to 12 inches thick; 50 Slabs of Red Mansfield Stone, from 1 to 3 inches thick; 50 Blocks of Red Mansfield Stone, from 6 to 12 inches thick; 50 Slabs of Grey Mansfield Stone, from 1 to 3 inches thick; 50 Blocks of Grey Mansfield

BRITISH ARCHÆOLOGICAL ASSOCIATION.—The Twelfth Annual Congress will be held at NEWPORT, in the ISLE of WIGHT, AUGUST 20th to 25th, inclusive.

PATRONS.
H. R. H. PRINCE ALBERT, K.G.
LORD HEYTESBURY, G.C.B. Warden of the Cinque Ports.
PRESIDENT, THE EARL of PEMBROKE and MONTGOMERY.

Excursions will be made to various parts of the island, churches, castles, and barrows examined and discoursed upon. A meeting will be held at the Audit-room at Southampton, to examine the ancient muniments of the corporation, and an excursion made to Netley Abbey.—Programmes, and tickets to admit a lady and gentleman, One Guinea, Single gentleman's ticket, half-a-guinea, to be had of Mr. G. WRIGHT, Librarian, 60, Pall-mall; of the Local Secretaries at Newport and Southampton, and of the Treasurer, T. J. PETTIGREW, Esq. 16, Onslow-crescent, Brompton.

COMPETITIONS.

WHITE CROSS TAVERN, Weston-super-Mare.—PREMIUM of FIFTY GUINEAS The proprietors of this estate cannot, in justice either to themselves or to the competitors, furnish any separate plans of the estate. A plan may be seen, on application to Mr. JOSEPH WHIDBEY, at the Public Library, Weston super-Mare; and perhaps it is not saying too much to affirm, that it is impossible to make a correct or satisfactory plan or design for building on this estate, without an actual and personal survey. The time for furnishing designs is extended to the 29th SEPTEMBER next.
Weston-super-Mare, August 7, 1855.

CONTRACTS.

TO IRONFOUNDERS AND OTHERS

GAS MAINS WANTED.—The Directors of the Dorchester Gas and Coke Company are desirous of receiving TENDERS, at per ton, for 800 Yards, more or less, of 4-inch bore CAST-IRON SOCKET-PIPES, weighing 17 lbs. per foot, and 330 Yards, more or less, of 3-inch bore, weighing 11 lbs. per foot, of 9 feet lengths, with socket heads, brass nos, street receivers, &c. The pipes must be correctly to insure uniformity of thickness, cast vertically from good malleable metal, perfectly sound and free from pin and cold cracks, and be proved under a pressure of 100 lbs. per square inch. The space for lead joint in the socket to be 2½ of an inch all round, the heads in the middle of each of which are to be pierced for the socket-fresh. All faulty and unsound pipes and other castings will be rejected and returned to the contractor. Tenders to state whether shot or cold blast pipes are to be delivered at the Gas Works, Dorchester, market Place, for Marnes," on or before WEDNESDAY, the 29th AUGUST next.

TENDERS are also required for the supply of 1 Ton of soft Pig Lead, the above to be delivered either at the Railway Station, Dorchester, or at the Railway Wharf, Poole, on or before the 1st day of OCTOBER next.

TENDERS are also required for Laying the above Mains, including all labour for excavating, making good ground, &c. under the special inspection of the Company's Engineer.

The Directors do not bind themselves to accept the lowest Tender.

Dorchester, Dorset, 2nd August, 1855.

EDWARD BILLOWS, Engineer.

TO PAINTERS AND OTHERS.

PERSONS desirous of TENDERING for PAINTERS' and other WORK, to be done at the Holy Trinity Church, can see the specification at the Office of the Architect, Mr. HENRY JARVIS, 2, Trinity-square, Nottingham. The Tenders are to be delivered at the Vestry-room of the Church on the 15th inst. at SEVEN o'clock p.m. No Tender will be accepted unless deemed satisfactory.—Dated August 2, 1855.

SECOND EAST LONDON BUILDING SOCIETY.—Offices, 1, Hayfield-place, Mile-end-road. 10th August, 1855.—TENDERS wanted for the ERECTION of SIX SMALL ROOMED HOUSES, in Oately-road, Grover and Pleasant Speculations, will be at the Office of THOMAS HOGERS, Esq. 70, Fenchurch-street, City, from TUESDAY, the 14th AUGUST, until MONDAY, the 20th; and Tenders will be received at the Society's Office until EIGHT o'clock in the Evening of the last-named day.
CHARLES BRADLAUGH, Secretary.

CONTRACTS.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Commanding Royal Engineer's Office Dublin, 4th August, 1855. The principal Officers of Her Majesty's Ordnance hereby give Notice that they will receive PROPOSALS for the following CONTRACT, viz.—For the CONSTRUCTION and ERECTION of ONE HUNDRED and SIX WOODEN BUILDINGS for commissary, books, cisplains, married soldiers, &c.; together with 1,200 yards run of fencing, at the temporary barracks, on the Curragh of Kildare, in the Dublin district. Persons desirous of Tendering for the same will receive every information on application at the Commanding Royal Engineer's Office, 1, Ewer Castle-yard, Dublin, and may obtain specifications, with the terms of contract, upon making a deposit of 1l for the same, which deposit will be repaid when the specifications are returned uninjured. The whole of the work to be completed within eighty days after the acceptance of the Tender.—The Letter of Tender to be sealed, and transmitted, under cover, to "The Director-General of Contracts, Ordnance Office, Pall-mall, London," so as to be received on or before the 31st day of AUGUST, 1855, and to be marked on the outside, "Tender for Works at the Curragh of Kildare."

NOTICE to BUILDERS.—Sealed TENDERS, addressed to J. WOOD, Esq. Secretary, Office of Ordnance, Pall mall, London, will be received until NOON of FRIDAY, the 17th AUGUST, 1855, from persons willing to CONTRACT for the performance of the WORKS required in ENLARGING the BARRACKS at WEYMOUTH, in the county of Dorset, Exeter District. Plans and specifications for the same may be seen, and forms of Tender obtained, at the Royal Engineer Office, Weymouth Barracks, between the hours of NINE and FIVE, from the 8th to the 16th AUGUST, 1855, both days inclusive. The Tenders to be endorsed "Tender for Enlarging Weymouth Barracks."—The Director General of Contracts reserves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Exeter, 30th July, 1855.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the London District hereby gives Notice, that Sealed TENDERS, addressed to J. WOOD, Esq. will be received at the Office of Ordnance, Pall Mall, on or before the 15th AUGUST, 1855, for the ERECTION of a GUARD-HOUSE on the West Face of the Tower of London. The specification and plans for the above service may be seen, and forms of Tender obtained, at the Royal Engineer Office, Tower, between the hours of TEN and THREE o'clock, from the 6th to 13th AUGUST, 1855. The Ordnance Department reserves to itself the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, London District, 3rd August, 1855

ORDNANCE CONTRACT.—Notice is hereby given, that TENDERS will be received at the ORDNANCE OFFICE, PALL-MALL, London, on or before TUESDAY, the 14th AUGUST, 1855, from parties willing to CONTRACT for EXTENDING the FOUNDATION round a portion of the GLACIS of FORT MONCKTON, Gosport.—Plans and specification for the work may be seen, and forms of Tender obtained, on application at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR o'clock (Sundays excepted).—The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall-mall, London, and endorsed "Tender for extending the Inundation round a portion of the Glacis of Fort Monckton, Gosport."—Royal Engineer Office, Portsmouth, July 27, 1855

Royal Engineer Office, Portsmouth, 3rd August, 1855.

TO IRONMONGERS and BUILDERS.—Notice is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on MONDAY, the 20th day of AUGUST, 1855, from such persons as may be willing to undertake the CONSTRUCTION and ERECTION of an IRON BUILDING, at the Gun Wharf, Portsmouth. The plans, specification, and conditions of contract may be seen, and every information obtained, on application at the ROYAL ENGINEER Office, Works, at the Office, between the hours of TEN and FOUR each day (Sundays excepted). The Tenders to be addressed to J. WOOD, Esq. Ordnance Office, Pall-mall, London, and endorsed "Tender for Erection of Iron Building, at the Gun Wharf, Portsmouth, in the county of Hants."

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of FARM-BUILDINGS on a farm called Southwood Farm, in the parish of Otterham, Hants, may see the Plans and specifications at the Office of Messrs. DENTON and DRAKE, 22, Parliament-street, Westminster, at the Offices of Mr. LAMB, Solicitor, Basingstoke, and after the 10th day of AUGUST. Tenders to be forwarded to Messrs. DENTON and DRAKE, on or before the 25th day of AUGUST.

SCINDE RAILWAY COMPANY.—CONTRACT for PERMANENT WAY MATERIAL. The Directors of the Company are prepared to receive TENDERS for the supply of 1,000 TONS of RAILS, 1,000 TONS of CHAIRS or PONS of FISHING PLATES, 1,000 TONS of BOLTS, NUTS, SPIKES, and WASHERS; 180,000 compressed WOOD KEYS, and 40,000 CROSS-TIE SLEEPERS. Plans and specifications may be seen at the Offices of Mr. T. A. YARROW, the Company's Engineer, Gresham House, Old Broad-street, on and after MONDAY, the 13th of AUGUST. Tenders in sealed envelopes, and addressed to the Directors, are to be lodged at the Company's Offices before TWELVE o'clock on FRIDAY, the 31st day of AUGUST. The Directors do not bind themselves to accept the lowest or any Tender.—By order of the Board,
THOS. BURNELL, Secretary.
Scinde Railway Offices, Gresham House, Old Broad-street, July 27, 1855.

BUILDERS willing to CONTRACT for the immediate ERECTION of TWO SEMI-DETACHED COTTAGES, at Ambleside-park Road, Newcross, may obtain forms and any further particulars of JOSEPH R. W. HARDING, Esq. Professional Institute, Alpha-road, New-cross; or of HORACE JONES, Esq. Architect, 6, Furnival's-inn, Holborn, where plans and specification may be seen. Tenders may be sent in to be delivered on or before SATURDAY, the 18th inst. The proprietor does not bind himself to accept the lowest or any Tender.

CONTRACTS.

TO IRONFOUNDERS AND CONTRACTORS.

PERSONS desirous of TENDERING for IRONWORK required to be used in the ERECTION of a large SHED and ROOF over the intended new Market hall, and other works, in lieu of entrances-gates, iron window frames, guttering, down pipes, &c. for the Town Council of Warrington, may inspect the drawings at the Office of the Architect, Mr. JAMES S. EVENS, 39, Princes-street Manchester, and Chester-gate, Macclesfield, from the 13th to the 22nd of Aug.; but instead, and at the Office of the Borough Engineer, Market-street, Warrington, from the 23rd to the 1st day of SEPTEMBER. The quantities have been taken out by the Architect, who will furnish the same on application, and charge the contractor with the cost thereof, the Corporation not being responsible for the same. Sealed Tenders, endorsed "Tenders for Roof of Market-hall and Shed," addressed to the Chairman of the Market Committee, are to be forwarded to Mr. B. P. COXON, Borough Engineer, not later than SATURDAY, the 1st day of SEPTEMBER, The Corporation do not bind themselves to accept the lowest Tender.—Signed by order of the Corporation,
JOHN FITCHETT MARSH, Town-clerk.
Warrington, August 3rd, 1855.

COUNTY of GLOUCESTER LUNATIC ASYLUM. To ENGINEERS and OTHERS Persons desirous of CONTRACTING for the MANUFACTURE and SUPPLY of STEAM BOILERS, for offering Tenders for the same are required at this Institution, in Gloucester, heating water for baths, &c. stoves, and distributing drying clothes, and warming and ventilating a portion of the buildings, may send in their proposals, describing specifications, and cash terms, on or before the 24th of AUGUST, at the usual address (To the Visiting Justices of the Lunatic Asylum, Gloucester," endorsed "Tender for Works." The estimates to include the delivery of all the necessary valves, fittings, and pipes any gear to complete the work, and fixers' work only excepted. Plans of the buildings may be seen at the Office of Cosby Saunders, Eastgate-street, Gloucester, between the hours of TEN a.m. and SIX p.m. of whom further particulars may be obtained. The Committee do not pledge themselves to accept the low st Tender.
Gloucester, August 4th, 1855.

TO BUILDERS, &c.

THE BURIAL BOARD for the parishes of Astley, Bedford, Pennington, and Westleigh, in the county of Lancaster, are desirous of receiving TENDERS for the ERECTION of THREE CEMETERY CHAPELS, ENTRANCE LODGE, ENTRANCE GATES, &c. on the new Burial Ground, situate in the parish of Bedford; also, for a BOUNDARY WALL. The plans and specification may be seen at the office of Mr. BIRD, Architect, 3, Town-land buildings, King-street, Manchester, from the 14th till the 25th day of AUGUST inclusive, between the hours of TEN and FIVE, where all farther particulars may be obtained. Tenders to be sent to RICHARD MARSH, Esq. Solicitor, Leigh, Clerk to the Board, endorsed "Tenders for Chapels, or Boundary Wall," as the case may be, on or before the 30th day of AUGUST next. The Board do not pledge themselves to accept the lowest Tender.
July 8, 1855.

BORDER COUNTIES RAILWAY.—NOTICE to RAILWAY CONTRACTORS.—TO BE LET, the CONSTRUCTION of the following VIADUCTS, viz.
Viaduct of Wrought Iron and Cast Iron over the River Tyne near Hexham.
Timber Viaduct over the Erring Burn.
Timber Viaduct at Coanies Park.
Timber Viaduct over the River Rede.
Plans and drawings are now ready, and may be seen, and copies of the specifications, bills of quantities and of the borings may be obtained, at the Offices of Mr. JOHN E. TOWSE, C.E. Market-street, Newcastle-upon-Tyne, and Tenders are to be delivered without fail on or before MONDAY, the 20th AUGUST, 1855, after which day no Tender will be received or the Tenders.
Dated August 2, 1855.

TO BUILDERS, &c.

CHEVENING CHURCH.—It being intended to RE-SEAT and otherwise improve the above CHURCH, new offices, &c. TENDERS are invited by the Churchwardens for the execution of the same. The plans and specification may be seen at the Rectory, Chevening, Kent, after the 11th inst. and TENDERS are to be delivered, sealed, addressed to the Churchwardens, at the Rectory. It is to be understood that the Churchwardens do not bind themselves to accept the lowest or the Tenders, or any of them.
W. BARTON, }
R. HEYDON, } Churchwardens.
Chevening, August 7th, 1855.

TO BUILDERS, CONTRACTORS, AND OTHERS.

THE CORPORATION of WARRINGTON are desirous of receiving TENDERS for the ERECTION of a NEW MARKET HALL and SHED, consisting of the following description of works, namely:—Excavators, stonemasons, bricklayers, carpenters and joiners, plumbers and glaziers, painters, and slaters, and ironwork, the Tenders for which may be tendered together or separately. The drawings, specification, and a form of contract may be inspected from the 11th to the 22nd of AUGUST next at the Office of the Architect, Mr. JAMES STEVENS, 39, Princes-street, Manchester, and Chester-gate, Macclesfield, and afterwards at their office in the Borough Engineer, in Market-street, Warrington. The quantities of each have been taken out by the Architect, who will furnish the same on application, and charge the respective contractors with the cost thereof, the Corporation not being responsible for the same. Sealed Tenders, marked "Tender for Market Hall and Shed, Warrington," addressed to the Chairman of the Market Committee, are to be forwarded to Mr. B. P. COXON, Borough Engineer, not later than SATURDAY, the 1st day of SEPTEMBER. The Corporation do not bind themselves to accept the lowest Tender.—Signed, by order of the Corporation,
JOHN FITCHETT MARSH, Town-clerk.
Warrington, August 1, 1855.

[*For remainder of Contracts see next page.*

CONTRACTS.

TO CONTRACTORS AND OTHERS.

THE Local Board of Health for the district of Uxbridge, Middlesex, are desirous to treive TENDERS from persons willing to CONTRACT for the ERECTING and CONSTRUCTING of SEWAGE WORKS near the Grand Junction Canal in the parish of Hillingdon being Contract No. II. Specification and plans may be seen, and contract be found by payment of 5s. to the order of JAMES PILBROW Esq. C.E. Tottenham, Middlesex, or of Mr. GEORGE HYDES, Architect, the Surveyor to the Board, at whose office at Uxbridge the plans can be seen, between the hours of NINE a.m. and FOUR p.m. Tenders must be delivered at the TAILY Book of THURSDAY, the 16th of AUGUST, next, indorsed "Tender for Sewage Works," addressed to the Local Board of Health, Uxbridge, Middlesex.—By order of the Board,

CHARLES WOODBRIDGE, Clerk.

Uxbridge, August 2nd, 1855.

TO NURSERYMEN AND OTHERS.

Sewers Office, Guildhall, August 2, 1855.

CITY of LONDON CEMETERY.—The Commissioners of Sewers of the City of London, acting as the Burial Board for the said City, hereby give Notice that they will receive, at their Office in Guildhall, on TUESDAY, the 28th day of AUGUST, at TWELVE o'clock precisely for the purpose of receiving TENDERS for the supply of TREES and SHRUBS for the Cemetery now being formed at Little Ilford, in the county of Essex. Forms of specification, with which the tenders are to be affixed, may be obtained on and after the 24th day of AUGUST, at the Office of Mr. WILLIAM HAYWOOD, Surveyor to the Commissioners, 14 Old Jewry chambers; or at the Office of Mr. DAVISON, Landscape Gardener, 1, Great Russell-street, Bedford-square.

JOSEPH DAW, Principal Clerk.

LIGHTERAGE.—The SURVEYORS of HIGHWAYS for the Parish of Christ Church, Surrey, are ready to receive TENDERS for the LIGHTERAGE (including wharfage) of 2,000 tons of Stones of the size of BLUE GUERNSEY GRANITE, broken to a two-inch ring, and sifted free from small and dust, and delivered to them by vessels over the ship's screen the upper part of the Tunnel as per ton as follows:—into the Surveyors' Yard, the contractor to be responsible for the Surveyors' weighing gear when the same is on board the vessel. Tenders to be forwarded on or before the 11th of AUGUST, 1855, to the Surveyors' Office, 31, York-street, Blackfriars-road, London, sealed and endorsed "Tender for Lighterage."

BROKEN GUERNSEY GRANITE.—The Surveyors of Highways for the parish of Christ Church, Surrey, are ready to receive TENDERS from parties for the supply of from one to five thousand tons of GUERNSEY GRANITE, broken to a two-inch ring, and sifted free from small and dust, and delivered to them by vessels over the ship's screen the upper part of the Tunnel as per ton as follows:—into the Surveyor's yard, the contractor to be responsible for the Surveyors' weighing gear when the same is on board the vessel. Tenders to be forwarded on or before the 11th of AUGUST, 1855, to the Surveyors' Office, 31, York-street, Blackfriars-road, London, sealed and endorsed "Tender for Broken Granite" Contracts for 1000 tons and upwards may be delivered during the summer months. Payment 1 month on account.

THE CONSERVATIVE LAND SOCIETY.

Trustees.

Viscount Ranelagh.
Right Hon. R. A. Christopher, M.P.
Hon. Col Lowther, M.P.
J. C. Colthurst, M.P.

TO ROAD CONTRACTORS.—The Executive Committee are prepared to receive TENDERS for CONSTRUCTING the ROADS and DRAINS on the Hounslow Heath Allotment. The crown and cambering of the roads to be in accordance with the Surveyor's specification, to be seen at the Office of the Surveyor, Mr. GEORGE MORGAN, on and after MONDAY, AUGUST 20; between the hours of TWELVE and FOUR. Tenders to be sent in on or before TWELVE o'clock on TUESDAY, AUGUST 28 addressed to the Surveyor, and indorsed "Tenders for Roads, &c. Round a Estate." The Executive cannot make themselves responsible for the acceptance of any Tender.

CHARLES LEWIS GRUNDISEN.

33 North-street Strand, 10th August, 1855.

FRANCIS MORTON AND CO.

Beg to inform ENGINEERS, CONTRACTORS, and the PUBLIC that they have increased their manufacture of Corrugated Iron by the purchase of the machinery and all the working dies of the Late firm of Messrs. PORTER, BROTHERS, and STUART, of BIRMINGHAM.

Parties accustomed to use the PARTICULAR SIZES of Corrugations heretofore manufactured by that Firm can be still supplied with the same sizes from the same dies.

FRANCIS MORTON and CO. manufacture now a greater variety of Corrugated Iron either galvanized or black, than any other house in the trade, comprising every intermediate size from 3 inches up to 10 inches each corrugation, in all lengths up to about 11 feet; also the angular or step corrugation.

STRONG PLATES CORRUGATED EXPRESSLY for FIRE-PROOF FLOORS, ROADWAYS, BRIDGES, PARAPETS, also for ALL KINDS of ROOFING RAILWAY WAGGONS, &c.

All kinds of GALVANIZED SHEET IRON ditto, expressly prepared for Tinmen's use; General Ironmongery and Iron Goods in stock, or galvanized to order.

The Trade supplied wholesale with Galvanized Water-buckets, Wire, Poultry, and other Netting, of every size; Best and Charcoal Wire, of all gauges; Wove Wire for Ventilation, &c.; Galvanized Water-pipes, Eaves-Gutters plain and moulded, Gas Tubing, much cheaper and more durable than lead; Water Cisterns, Wire Ropes, Window-sash Cords, Signal Cords and Pulleys; Copper Rope Lightning Conductors, with Points and Attachments complete.

Fencing Wire and Telegraph Wire, in long lengths.

The inventors of the PATENT WIRE STRAND FENCING, which is supplied and erected complete, at per yard.

Wrought-iron FIELD GATES, CATTLE and SHEEP HURDLES, and DEER FENCING of every description.

The PATENT ASPHALTED ROOFING FELT, at 11 per square foot. Dry Hair Felt for Dead Lining Roofs, for Boilers, and Steam Pipes, made in rolls 32 yards long, at a reasonable price.

Contractors for all kinds of Wrought and Cast-iron FENCING, PALISADES, ENTRANCE-GATES, and VERANDAHS.

Ships fitted with Wire Rope Rigging, Galvanized Chains, Anchors, &c.

THE TRADE SUPPLIED ON LIBERAL TERMS.

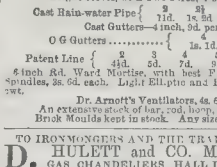
Head Offices: 13, JAMES-STREET (late Coalbrookdale Company's Premises), LIVERPOOL; Also 18, ST. MARY'S-GATE, MANCHESTER.

N.B. All kinds of Iron and Ironwork Galvanized, and Sheet-iron Corrugated at very moderate prices.

REDMUND'S PATENT HINGE MANUFACTORY, WELLINGTON FOUNDRY, Charles-street, Oxford-road, near the Canal-bridge. Established thirty years.—E. GOLLOP, widow of the late J. Gollop, sole manufacturer of REDMUND'S and GOLLOP'S PATENT, rising and self-fitting spring, swing, double acting, gate, and other Hinges, Floor Centres, &c. &c. Orders for Hinges only, addressed to Mr. J. WALBY, sole Agent, at the Warehouse, 59 Greek-street, Soho; or at the Foundry, will be promptly attended to.—Every description of Small, Soft, and Malleable Iron Castings.

COLLINGE'S PATENT HINGES.—Manufacturers, CHARLES COLLINGE and Co. 64 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coach-house, and other gates and doors of large and small dimensions, a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-rising spring hinges, and scissor-gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-greases, sugar-mills, &c.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S office, 145, Regent-street, London.



HEATING BY HOT WATER.

JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 8d. This achievement in heating by hot water is unprecedented.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. opposite to the Monument, London-bridge. Established A.D. 1700.

GLOVERS' IRONWORKS,

168, DRURY-LANE, and CHARLES-STREET

SAWING, PLANING, and MOULDING MACHINERY.—SAMUEL WORSSAM and COMPANY give notice that they have lately greatly enlarged and improved their Premises in the Kingsroad, Chelsea, and added to their very extensive and first-class Steam Machinery and Tools for making all kinds of Machines for Sawing, Planing, Grooving, and Moulding Wood. They have constantly on hand Machinery either wholly or partly made, so that they can, at all times, on short notice, supply them. S. W. and Co. beg to state that they confine their attention to this sort of machinery, and have had the honour lately of supplying some of the most distinguished Engineering and Contractors in the world with their Machines for home and foreign use.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, desirous of work, are invited to call at the Patentees, POWIS, JAMES, and Co. Wholesale Bedstead and Cabinet Makers, Ironmongers, Carpenters, 98, Watling-street, City, and see a machine in every respect powerful, and expeditious machine, which is the only one yet brought out, for performing this, three separate kinds of work in one machine; and as to self-fitting, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

MORTISING MACHINE. 12l. to 18l.

KIMBERLEY'S PATENT MORTISING MACHINE.

The Patentee feels justified in calling attention of all Builders, Cabinet-makers, and others to this simple, strong, cheap, and most effective machine. Hundreds are now in use all over the Kingdom, and after needless any extent can be given to prove it really is what it is represented, viz. the most valuable tool ever offered to the trade.

Amongst testimonials of the highest character he would respectfully invite attention to the following:—

"Dear Sir, In reply to your inquiry respecting the Patent Mortising Machine I purchased from you some months ago, I have to inform you I consider it a most SIMPLE, EXCELLENT, and DURABLE ARTICLE; nor do I think it possible to find anything when I state it is highly superior every way to one I was recently induced to purchase from a London house, which, although represented to be superior in its principle and make, has totally deceived myself and all others, as it is slow to work, and is useless in comparison with your own, upon which I believe not a sixpence has been expended since received from you, although in constant work. I candidly assert that its use in my shop is of GREAT VALUE, as it must, indeed, be to every builder who possesses it.

"I am, Sir yours faithfully,

"JOHN PARNELL."

London Agents: Messrs. PUGH and CO., Kingsland Shot-tower. Keep Stock of all Kimberley's Patent Tools, Hooping Cramps, &c.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

At JOHN YOUNG'S, Birmingham and Wolverhampton, Agent, Factor, and General Ironmonger, 18, Bloomfield-street, Manchester-square, running out of Baker-street, Portman-square. Every other article equally reasonable.

THE LIZARD SERPENTINE COMPANY manufacture and sell in block and slab, the beautiful Stone now raised from the lower beds of their Quarries. Chimney-pieces, Columns, Fonts, and Tablets, of every size and description, may be had at the Company's Show-room, 29, Regent-street, Waterloo-place, and at the Quarries, Lizard, Cornwall.
HENRY COX, Manager at the Lizard.
F. W. RUFFLE, Agent in London.

THE LONDON and PENZANCE SERPENTINE COMPANY having just opened an extensive SHOWROOM, at No. 18 Wharf, Macclesfield-street, North, City-road, for the sale of CHIMNEY-PIECES, and other articles, useful architectural, and ornamental, invite Architects, Builders, and the trade generally, to inspect the same. A large assortment of fancy articles are also always on sale at the Company's Stall in the Mineral Manufactures Court, in the Crystal Palace, Sydenham. Estimates given, and orders promptly executed.
July 25, 1855. C. ADENEY, Secretary.

MARBLE CHIMNEY-PIECES.—TO BE DISPOSED OF, about TWENTY or THIRTY, suitable for second or third-rate houses, at moderate prices.—Apply at No. 1, North Crescent-mews, Burton-crescent, Saint Pancras.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors, and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their STOCK of MARBLE is received direct from the principal quarry owners in Italy and Belgium, for SALE on COMMISSION ONLY, and that they can consequently supply the Trade with the finest marbles at the lowest prices. Sawn Slab, Mortars, Vases, &c.; Yorkshire and Portland Stone for sale on commission.
The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge

MARBLE.—Mr. B. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

MARBLE and GRANITE RUNNERS.—Several Pairs, TO BE DISPOSED OF, with Water Wheel, Gear, &c.—Apply, by letter (in the first instance), to Mr. WILLIAM THOMAS, Builder, 73, York-road, Lambeth

TO THE MARBLE TRADE.
MR. B. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. B. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.
PIMLICO MARBLE WORKS,
BELGRAVE-WHARF,
LOWER BELGRAVE PLACE.
SAMUEL CUNDY.

THE STOCK OF LOW-PRICED CHIMNEY-PIECES ARE WELL AND CAREFULLY MANUFACTURED OF THE BEST MATERIAL.
PRIZE MEDAL IN 1851 FOR A MONUMENTAL WORK.
